

AI Ideation Workshop - Gain a comprehensive understanding of AI's potential for your business with Microsoft Azure

THE CHALLENGE

The challenge with implementing AI is identifying the right opportunities, securing the necessary resources, managing implementation complexity, and ensuring scalability and integration within existing systems.

Deep Dive into your company's AI Potential

In our immersive 2-day workshop you will gain a comprehensive understanding of AI's potential for your business. Discover the most promising AI use cases, the resources needed to implement them, and a clear roadmap to success.

At first we focus on understanding your AI aspirations and business constraints. Through collaborative discussions, we'll gain insights into your unique processes, challenges and goals. Our experts lead an interactive brainstorming session to identify potential AI use cases for your business. Together, we'll prioritize them based on value and complexity.

We'll select a "lighthouse project" use case to be developed further as Proof of Concept (PoC). Our approach is to think big, but start small. We'll focus on a use case that adds immediate value without too much complexity, giving you a clear understanding of AI's impact from day one and creating trust and enthusiasm within your company. To achieve these goals, we are contributing our expertise in building the scalable data platform based on Microsoft Azure and Databricks.

Deliverables

After the workshop, you will receive a detailed summary of the workshop topics, discoveries and definitions

- Data Evaluation "Status Quo" (Quality, Usability, Accessibility, To Dos etc.)
- Roadmap Data Strategy and Platform with Microsoft Azure and Databricks
- Identified Use Cases
- Detailed offering for the "Lighthouse Project"

WHAT WE CAN ACHIEVE TOGETHER

Unlock the Full Potential of Your Data with us

Why Choose Us?

- **Expertise:** Our team has extensive experience in AI projects, data and AI strategy and platform implementation with Microsoft Azure.
- **Customized Solutions:** We tailor our approach to meet your specific needs and objectives.
- **Proven Results:** Our clients have seen significant improvements in data quality, security, and business performance.

Contact us today to start your journey towards excellence in data and AI. Let's transform your data into a powerful asset that drives your business forward.
