DISCLAIMER

This presentation contains numerical data that has been sourced from our esteemed clients. It is important to note that these figures are provided in the context of their respective business operations and have been shared with us for the purpose of this presentation.

Please be aware that client-sourced data can be subject to various factors that may influence its interpretation.

ABOUT AIQ

AIQ – AI SOLUTIONS FOR THE INDUSTRIAL SECTOR

AIQ was launched in 2020 as a joint venture between global energy company ADNOC and UAE AI specialist, G42.

With AIQ's proven expertise and top talent, our AI solutions will help clients to perform better, protect their teams and equipment, keep operations sustainable and rapidly scale successes up to the enterprise level

AR360

PERFORM WITH **AIQ**

THE CHALLENGE

A Field Development Plan (FDP) provides the best technical solution and guide for optimizing the development and production of an oil or gas field.

FDP studies outline the necessary information for producers to assess all the economic decisions required to make a positive economic return from working a field.

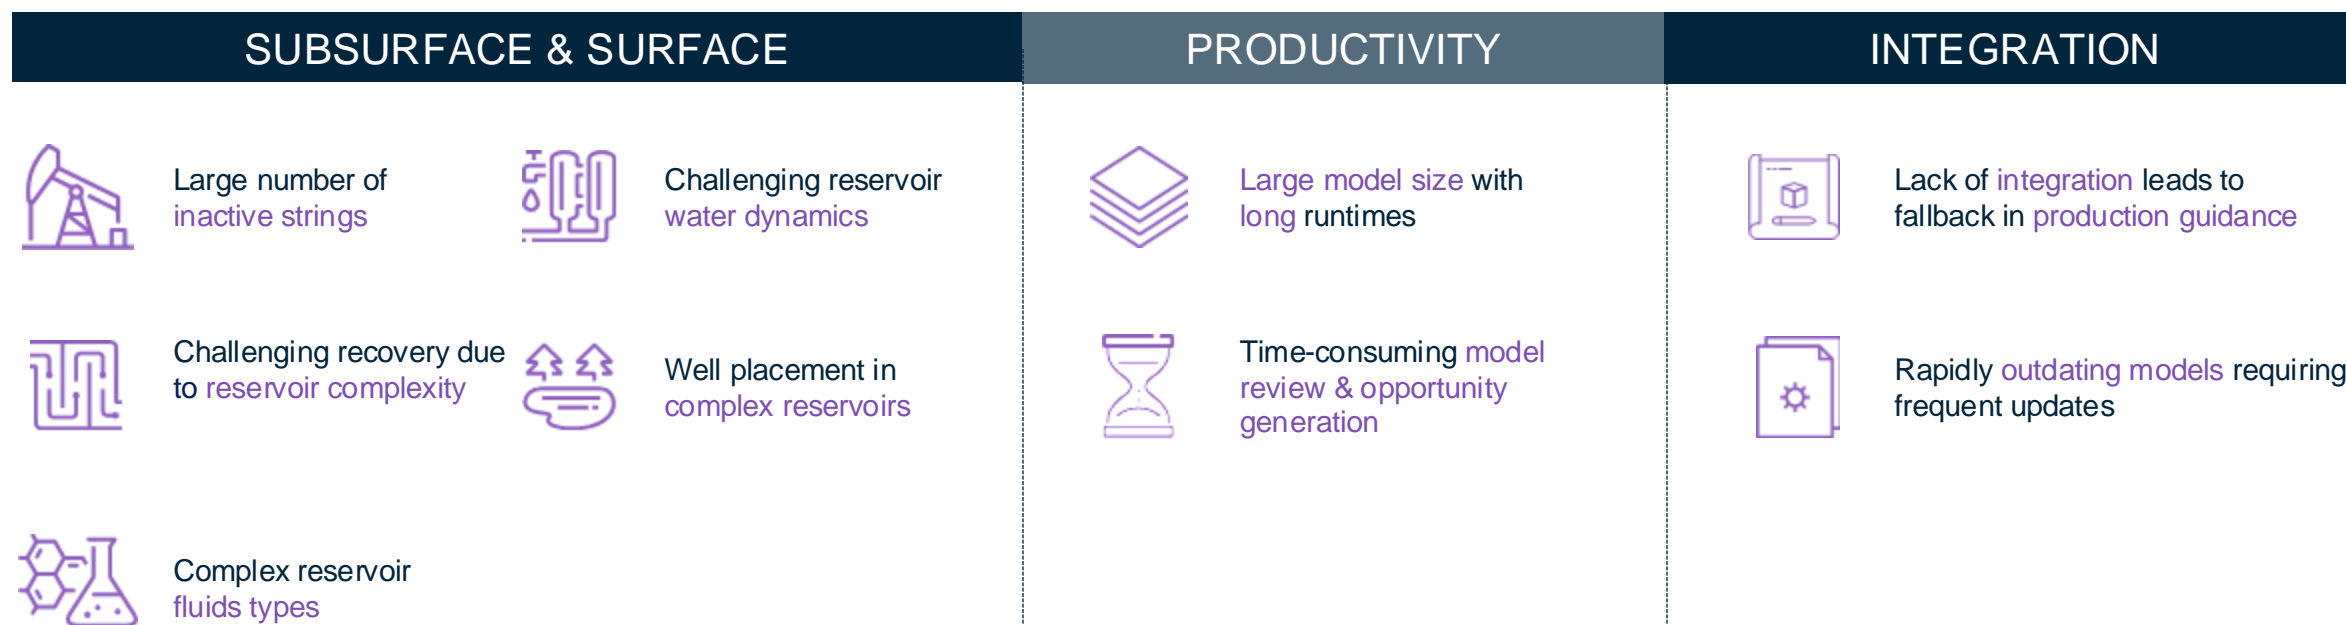

Central as they are to field investment and operation, FDPs can be complicated by factors such as reservoir structure uncertainty, petrophysics, the potential for well collusion, and fluid flow interaction. This range of possibilities requires inputs from multiple disciplines, historically working individually.

THE CHALLENGE

Poor initial characterization of reservoirs, or not fully integrating available development technologies can hamper the accuracy of assessments of field production rates.

This can lead to an inaccurate estimation of recovery.

AIQ SOLUTION – APPLICATION APPROACH

AR360 is an automated assessment tool that provides a 360° view of new and existing well characteristics, enabling the creation of high-quality reservoir models that provide Intelligent Well Production Forecasts.

The application is predictive, providing a 75% efficiency gain in user productivity in performing comprehensive reservoir model reviews.

EXISTING WELLS – INTELLIGENT
PRODUCTION FORECAST

SHORT-TERM PRODUCTION PLANNING

CHALLENGES

- Current production forecasting from simulation models are generally geared towards long-term optimization and take months to generate.
- Absence of fast and accurate forecasting methods on the short term (1-2 years) to plan for production guidance.
- No data driven tools based on historical production data to test infill well scenarios.

SOLUTIONS

- Machine Learning based forecasting of production performance of wells towards efficient infill drilling planning and business plan assessments.

VALUES

- Improve production forecast guidance and reduce costs by 5-10% associated with drilling of new wells.

AIQ SOLUTION – APPLICATION APPROACH

WELL WORKOVER CANDIDATE SELECTION

INSIGHTS

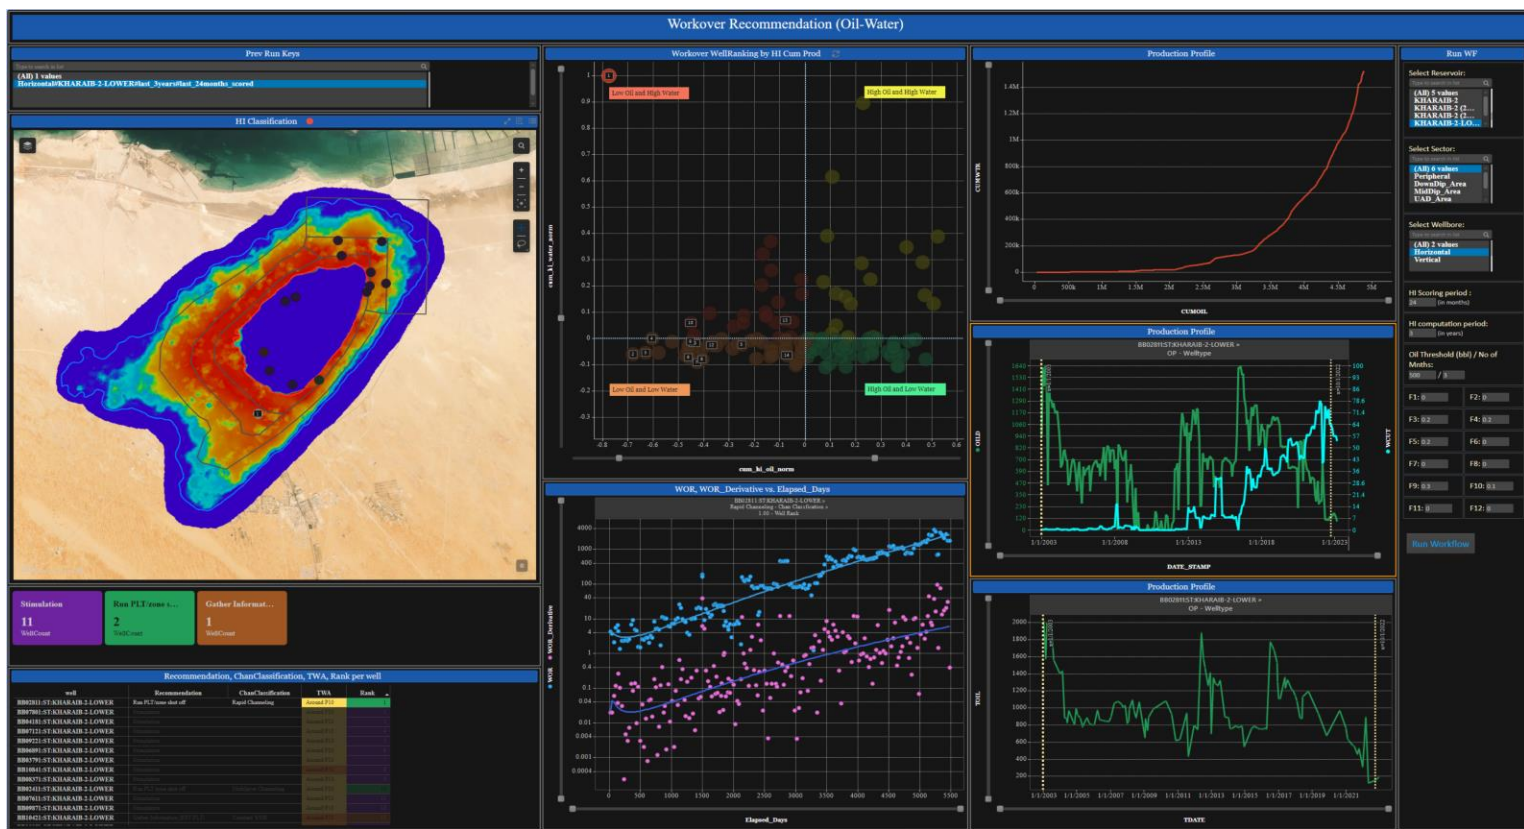

- Identify workover candidates for choke down and water shutoff operations for high water cut producers.
- Assists to delineate workover candidates for re-perforation and stimulation operations for low productivity wells.
- A map displaying wells classified into different workover types can reveal areal or regional trends.

FEATURES

- Screening of active wells for **low productivity** or **high water** or **gas** producing wells using Heterogeneity Index Workflow.
- Apply Chan Analysis for high producing water wells to assess water production mechanism.
- Well workover recommendations ranking for each well by workover type.
- Integration with simulation model results to improve decision making.

AIQ SOLUTION – APPLICATION APPROACH

ACTIVE WELLS

HETEROGENEITY INDEX

CHAN ANALYSIS

AIQ SOLUTION – APPLICATION APPROACH

STREAMLINES BASED WATERFLOOD OPTIMIZATION

INSIGHTS

- Performance Analysis of production and injection wells.
- Enables identification of potential workover candidates to resolve production / injection issues and reach optimum waterflood performance.
- Provide recommendations for the following:
 - Wells with potential oil production Increase
 - Producer wells to convert to injectors
 - Injectors with potential injection increase
 - Injectors to shutdown injection

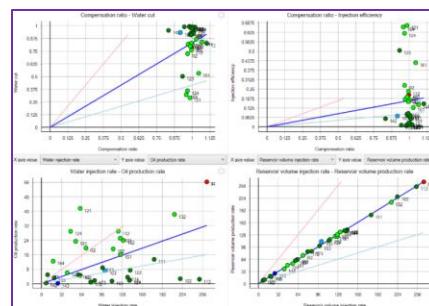

FEATURES

- Holistic view of waterflood optimization opportunities for the period of analysis selected by the user.
- User defined producer / injector waterflood optimization logic selection criteria.
- Waterflood analytics plot with optimization insights.
- Could be used for current operations or in future FDP scenarios

AIQ SOLUTION – APPLICATION APPROACH

STREAMLINES BASED WATERFLOOD OPTIMIZATION

01

DYNAMIC MODEL & STREAMLINES

Injector – producer pairs
identification and mapping

Flow and phase ratios
estimations.

02

WATERFLOOD ANALYSIS (CROSS-PLOTS, TABLES ETC.)

Comprehensive analysis of production / injection
wells. Identification and selection of groups:

- Production / injection increase / decrease
- Production / injection shutdown
- Convert producer to injector.

03

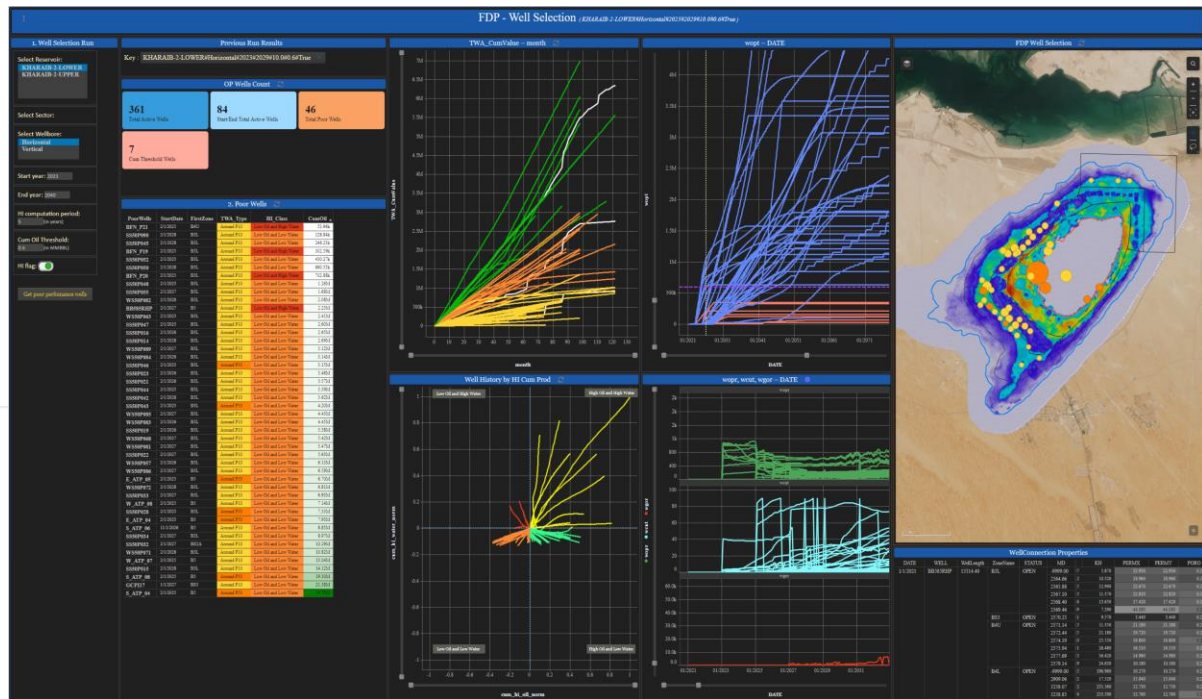

WORKOVER SELECTION & OPTIMIZATION

Select potential workover candidates to
debottleneck waterflood operations.

Create and manage workover strategies.

Assess an effect of workovers to select
most optimal actions/

AIQ SOLUTION – APPLICATION APPROACH

AGILE FIELD DEVELOPMENT PLANNING (AFDP)

FEATURES:

- Screening of poor future FDP wells (5Y BP or all future wells)
- Run Heterogeneity Index (HI) and TWA workflows to assess well performance
- Rank poor wells based on HI + TWA and Cum Volumes
- User selected location for new infill drilling forecast.
- Capable of Data Driven forecasting of all three phases – oil, water and gas.

AR360

PERFORM WITH **AIQ**

Enables the creation of high-quality reservoir models that deliver Intelligent Well Production Forecasts, providing up to 75% efficiency gain in user productivity

BUSINESS VALUE & BENEFITS OF AR360

REDUCE COSTS

Reduce number of new infill wells by 5-10% in one reservoir over five years. Boost waterflood program to improve oil recovery per barrel of water injected by up to 10%.

INCREASE PRODUCTION

Extend life of existing wells by 10% in one reservoir (~5% of wells) over five years. Improve production from new wells by 30% in one reservoir (~5% of new infill wells) over five years

IMPROVE EFFICIENCY GAIN

Speedup reservoir model review and opportunity generation processes by 75%.

INTRODUCING THE PERFORM BY AIQ

PERFORM BY AIQ

Delivers innovative techniques and applications maximizing productivity with process control, optimizations and increased reservoir understanding.

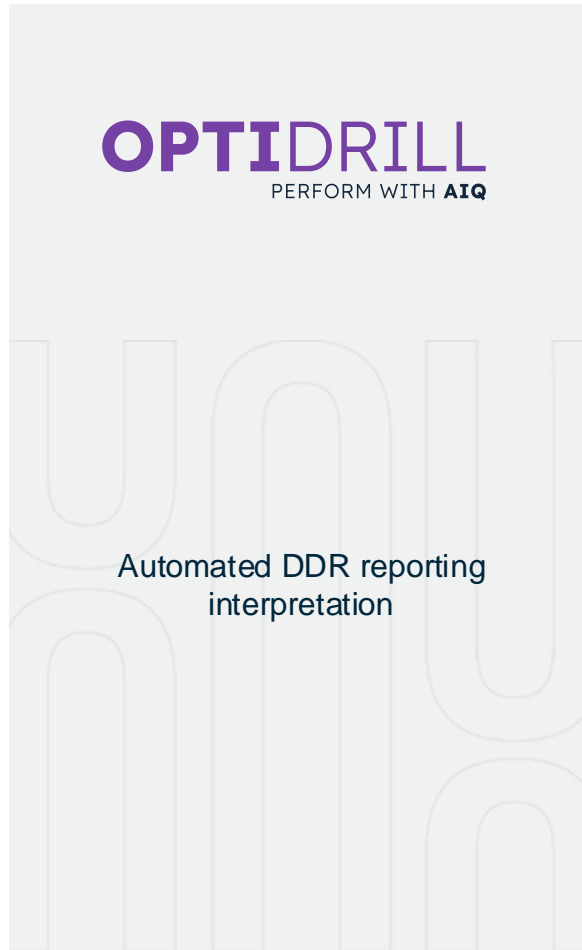

The pioneering, web-based AI-powered application equips geoscientists with the next-generation of reservoir characterization and management tools.
