

AIVALS AI Interview User Guide

Step 1: Access

Access via mobile or PC.

Step 2: AI Job Information Completion

Describe the job description through a conversational interface.

Step 3: AI-generated Assessment Dimensions

Confirm the detailed JD content; can be modified or supplemented multiple times.

Sign In / Sign Up

1. 5+ years of front-end development with **React**.

2. Strong proficiency in JavaScript/TypeScript, HTML5, CSS3.

3. Experience with state management (Redux/MobX).

4. Familiarity with CI/CD pipelines.

Why Apply?

1. Competitive salary + equity.

2. Flexible work environment.

3. Career growth in a fast-scaling company.

Ready to advance your React expertise? Share your portfolio/GitHub, and let's chat! 🚀

(Note: This is a sample listing. Actual roles may vary.)

ok

OK, I will generate the assessment content according to the above requirements

Knowledge Point Name	Knowledge Point Definition	Importance Level
React Proficiency	Depth of experience and expertise in React, including component lifecycle, hooks, and performance optimization.	high
JavaScript/TypeScript Skills	Strong command of JavaScript/TypeScript, including ES6+ features, type systems, and asynchronous programming.	high
State Management	Experience with state management libraries like Redux or MobX, including middleware and best practices.	medium
UI/UX Implementation	Ability to translate design mockups into pixel-perfect, responsive interfaces with HTML5 and CSS3.	medium
Testing & Debugging	Proficiency in testing frameworks (Jest, Cypress) and debugging tools to ensure code quality.	medium
Tooling & Build Systems	Familiarity with build tools like Webpack and module bundling for optimized production deployments.	low
API Integration	Experience integrating front-end applications with RESTful/GraphQL APIs.	medium
Mentorship & Collaboration	Ability to mentor junior developers and collaborate effectively in cross-functional teams.	low
Bonus Tech Stack	Knowledge of Next.js, Node.js, or AWS, which are considered advantageous but not mandatory.	low

ⓘ Each Dimension will randomly select one question to ask. The system will ask a follow-up question based on the candidate's answer

Question Content

React Proficiency

1. Can you describe a complex React component you've built and how you managed its lifecycle?

ⓘ Replace

2. How do you optimize performance in a React application? Can you share a specific example?

ⓘ Replace

3. What are React hooks, and how have you used them in your projects?

ⓘ Replace

4. Can you explain the difference between class components and functional components in React?

ⓘ Replace

5. How do you handle state lifting in a React application? Provide an example.

ⓘ Replace

JavaScript/TypeScript Skills

1. Can you explain the difference between 'let', 'const', and 'var' in JavaScript?

ⓘ Replace

2. How do you handle asynchronous operations in JavaScript? Provide an example.

ⓘ Replace

3. What are some ES6+ features you frequently use, and why?

ⓘ Replace

4. Can you describe a situation where you used TypeScript to solve a problem in your project?

ⓘ Replace

5. How do you ensure type safety in a TypeScript project?

ⓘ Replace

State Management

1. Can you describe a project where you used Redux for state management? What were the
