# Adaptive Protection Against Web Application and DDoS Attacks

### **WAF** Critical protection for every business

#### Two types of attacks

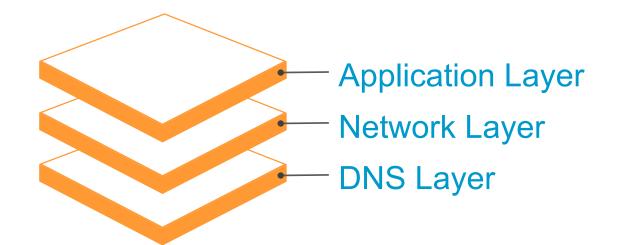

### Want quick money

- Target many at once
- Low effort to hide
- Known methods

#### Want big money or damage

- Target a few organizations
- High effort to hide
- Unknown/new vectors

#### Broad attack surface

### Web Application Threats DDoS attacks on the rise

16% layer 3&4 attacks

**138%** application layer attacks

Results of DDoS attacks:

- Flooded networks
- Overloaded infrastructure
- ✓ Distributed deployments

# GitHub MIRAI

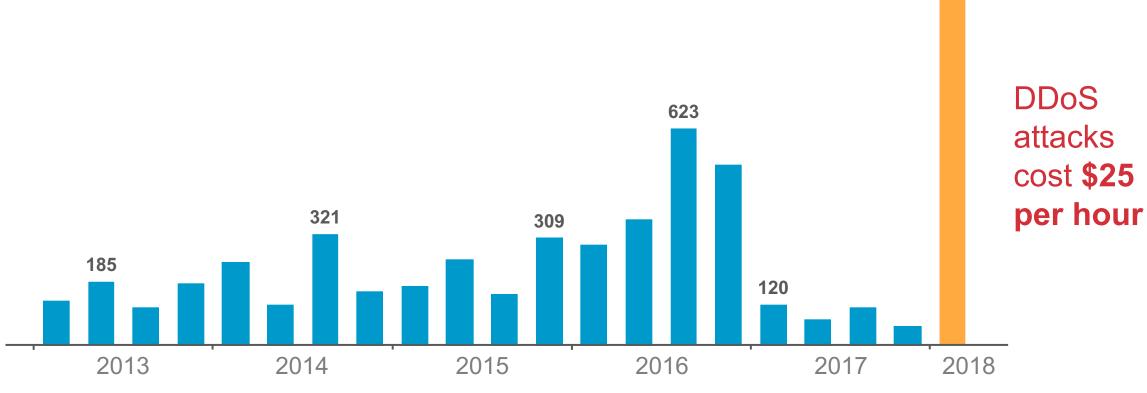

Source: SOTI DDoS Attack update Summer 2017 vs. Summer 2018

#### **DDoS Attack Trends** Attacks easily double in size

Peak traffic in Gbps

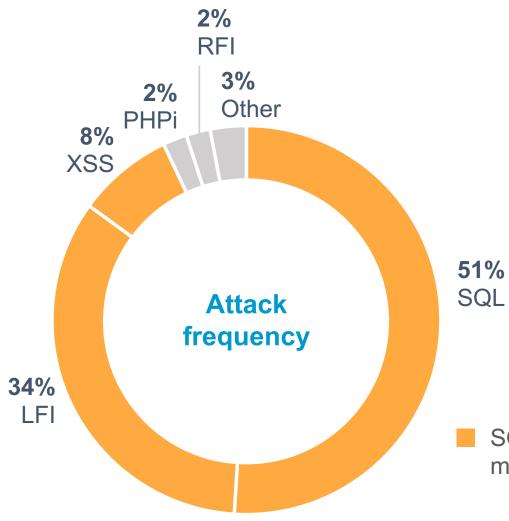

Price Source: CIODIVE

1,252

#### **Web Application Threats**

Well-known attack vectors:

Are frequently used

Create background noise to hide new attacks

SQL, LFI, and XSS accounted for **93%** of malicious attacks in the most recent period.

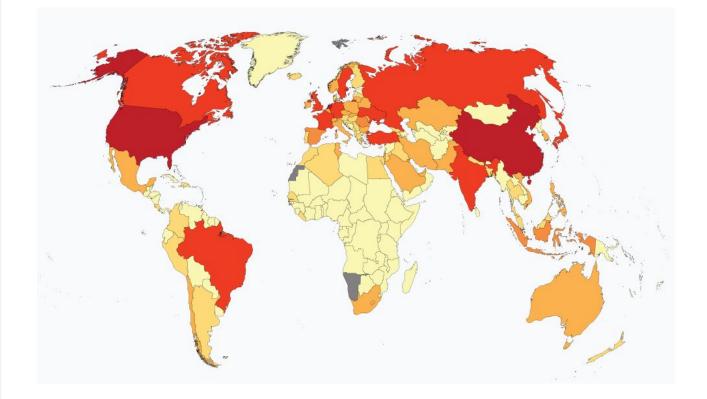

#### Web Application Threats

Attacks are on the rise:

- Growing in scale
- Growing in sophistication

#### Originating across countries

Count	Percentage
238m	30%
94m	12%
56m	7%
49m	6%
35m	4%
	238m 94m 56m 49m

#### What Does This Mean for Your Business?

Web application attacks represent a large part of the **background noise**  It's difficult to **detect attacks** specifically targeting your business in that noise

Understand your website traffic and business for better **threat detection** 

# **Threat from Operational Complexity** 60% of security software remains unused

Top IT challenges are a lack of:

Business alignment

- Time/expertise to implement
- Staff to use product properly

Edge security

- Massive scale to mitigate and absorb attacks
- Insulates from collateral damage by attacks against other customers
- Removes malicious traffic from servers and networks, avoiding overprovisioning costs
- Prevents performance degradation from attacks consuming vital resources
- ✓ Delivers better end-user experience with content caching

Adaptive threat protection

- Maintains accuracy in fast changing threat landscape
- ✓ Data driven, best-in-industry research team
- Analysis of 15% to 30% of all internet traffic
- Continuous rule testing and tuning
- Automated rules designed for low false positives
- Special protection with custom rules

Simple operation

High degree of automation to increase operational agility and efficiency

- Automated rule updates offload your security teams
- Allows focus of resources and research on your high-value web assets
- Easy-to-read web analytics data in real time
- ✓ Dashboards support deep forensic analysis

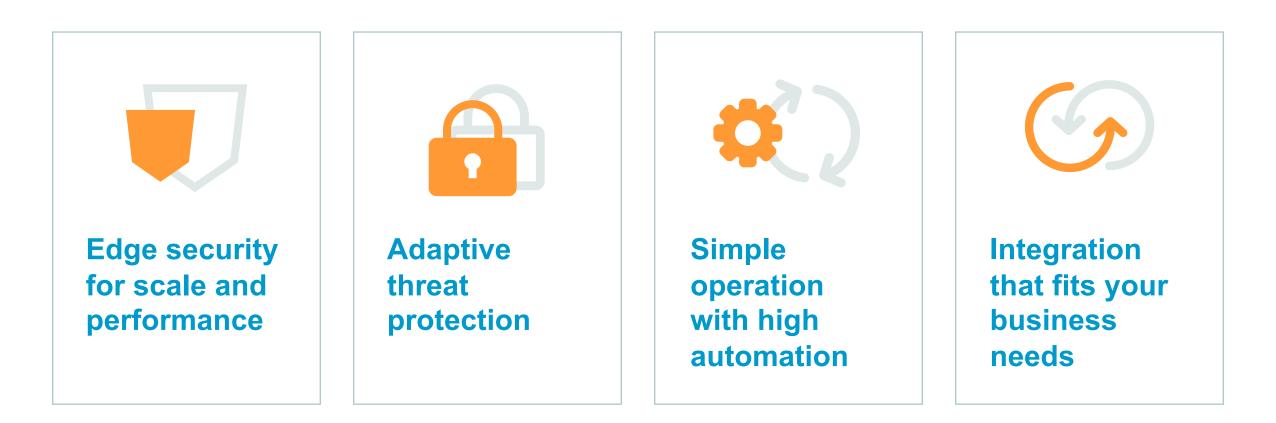

Integration that fits your business needs

- Self-service integration for vital protection
- Guided by experts to build a defense-in-depth solution
- Managed services for a complete security solution
- ✓ Technical and threat research support when you need it most

#### **The Better Web Application Firewall** What does it mean?

# Web Application Security Adaptive protection with more than just a firewall

**Extend your security perimeter far beyond your site** Scale your defense with a cloud edge WAF

**Protect against all network layer DDoS attacks** Reverse-proxy drops all traffic not on port 80 and 443

**Refuse requests from countries outside your business** Geo-based blocking of IP addresses

**Protect from known attackers** Positive or negative security model (black or white lists)

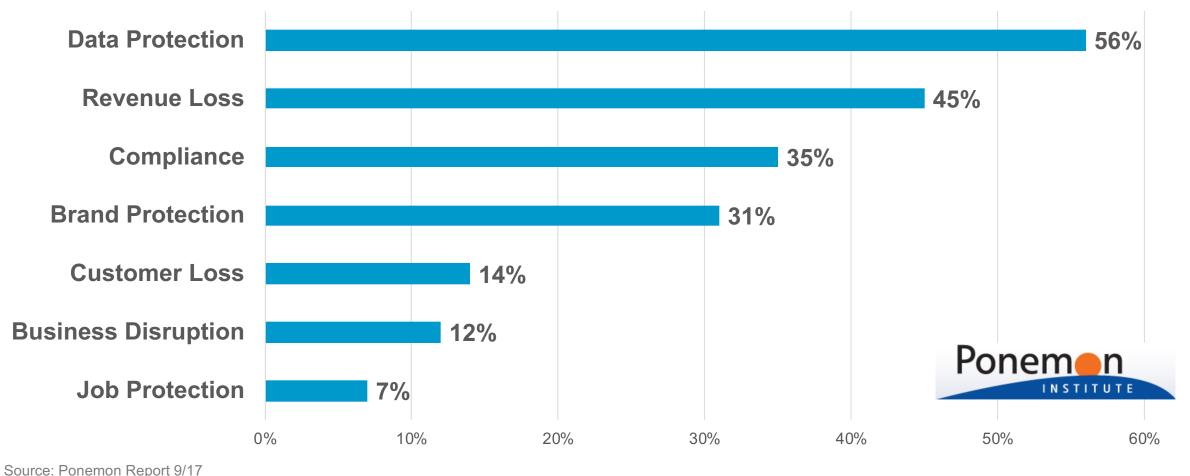

**Protect against application layer DDoS attacks** Rate controls block traffic that acts too fast or too slow

Use best WAF rules in the industry with confidence Data driven, continuously monitored and refined

**Protect content servers, improving end-user experience** Dynamic and static content caching

# **Web Application Protection** Addressing organizations' top concerns

**Akamai** Experience the Edge

#### What to Expect More mature and advanced attacks

- Fast-changing threat landscape with new attack vectors, volume and variety
- Attacks tuned to exploit specific vulnerabilities
- Attacks tuned to avoid detection
- Attacking via the API layer
- Zero-day attacks
- Leveraging of bot networks

### Kona Site Defender Protection against most sophisticated attacks

#### **Kona Site Defender**

- Robust and customizable protection
- Customized integration
- Self-managed or Akamai managed
- Additional custom rules, whitelists and strong rate controls
- Detailed threat reporting tools for indepth forensic analysis
- Optional add-ons for additional protection
- Powered by Akamai Intelligent Edge Platform

#### Your site

Protection against the most sophisticated attacks.
