Alerant Devops Services

automation of delivery processes

1.0

alerant

Microsoft Partner | Silver DevOps
Silver Application Development
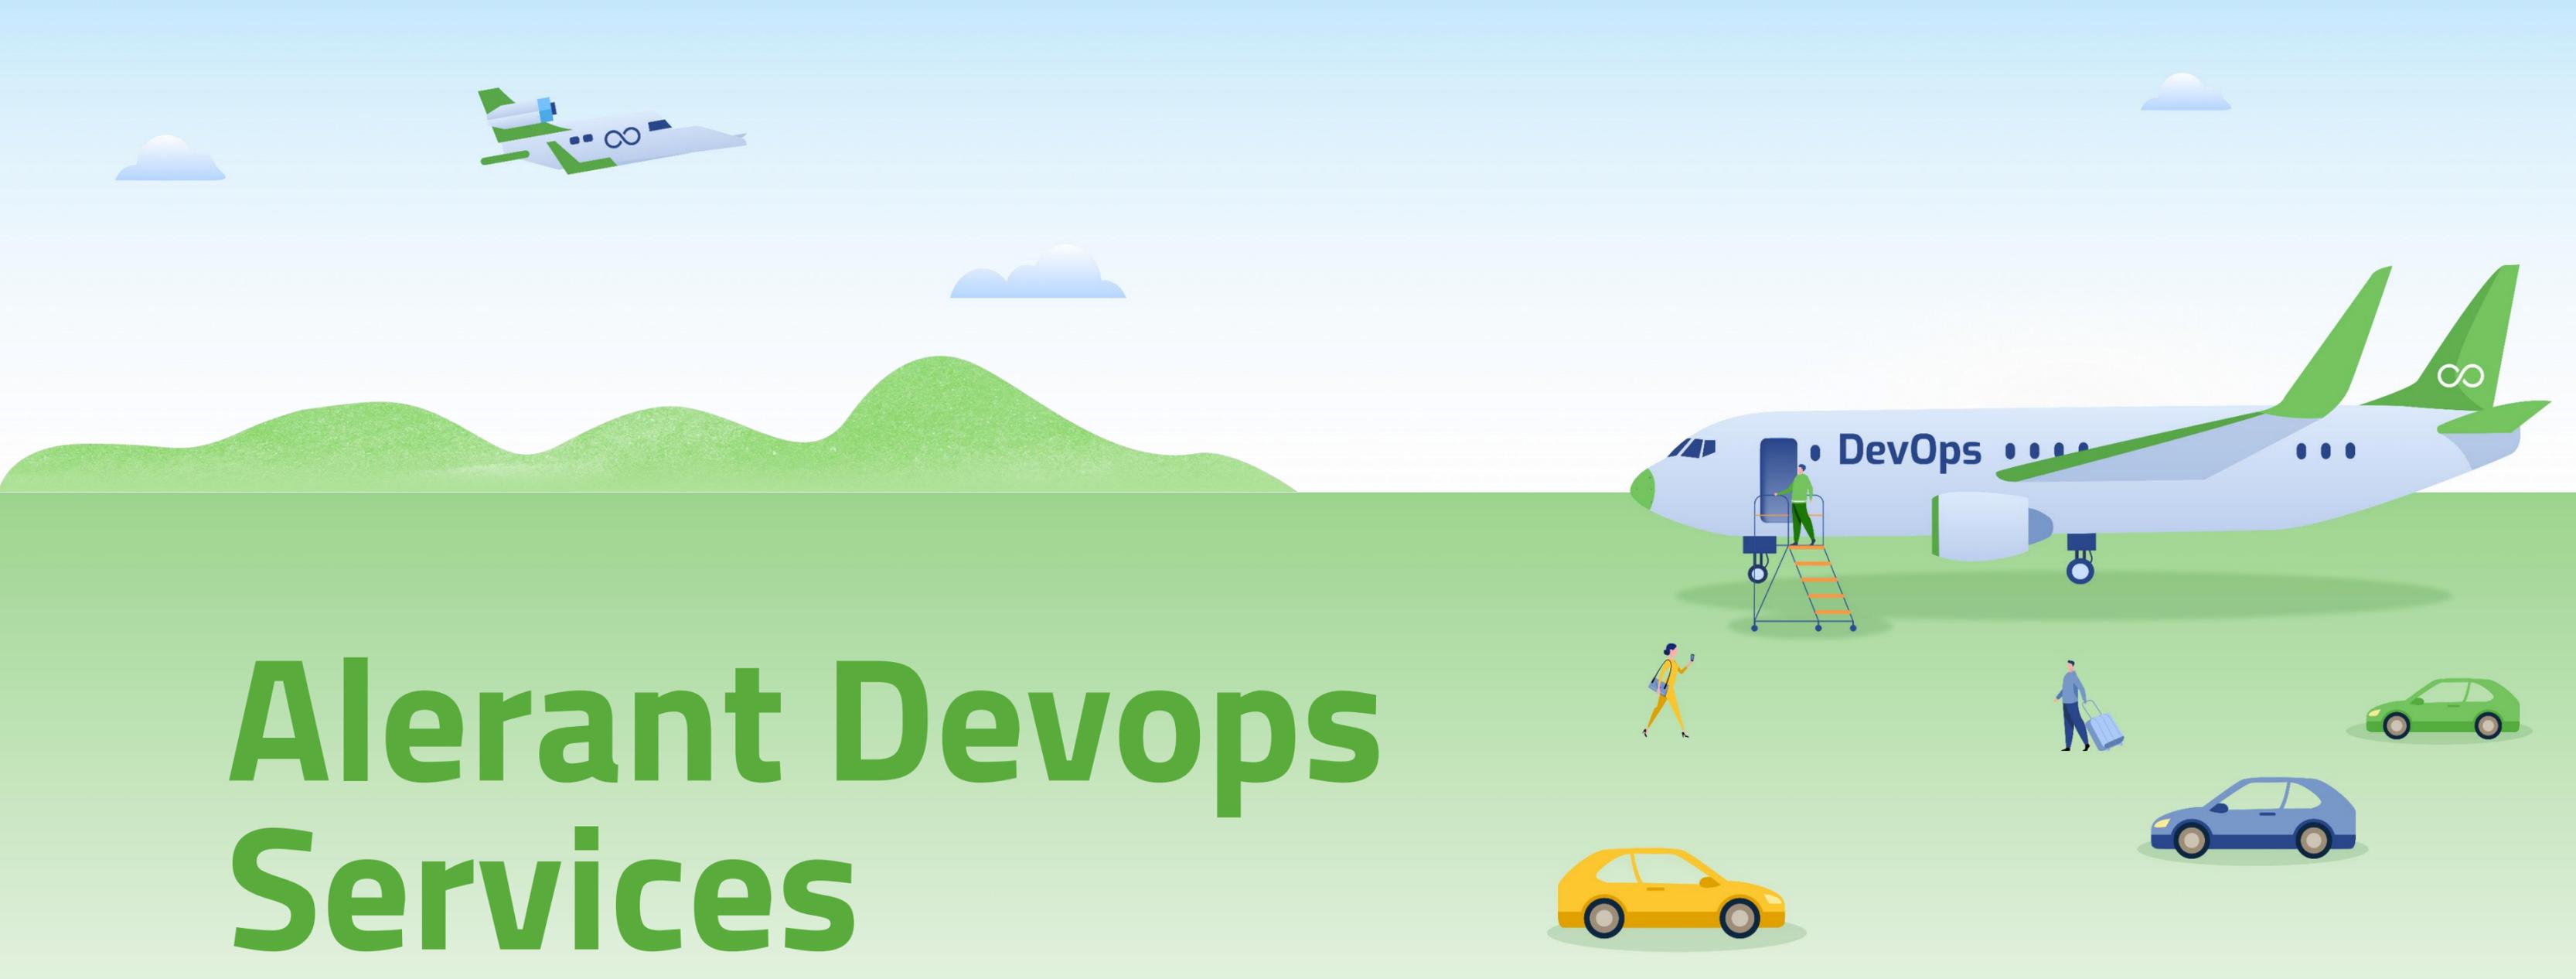

DevOps Automation Services

"DevOps is about people, process and technology". DevOps from Alerant helps you leverage the full potential of the move to a Cloud Operating Model, with practices and principles to maximize utilization and agility and minimize costs of your Cloud environment.

1 Assesment &Planning

The integration of the Microsoft Azure DevOps toolset, the associated best practices and Alerant's 2 decades of enterprise IT experience have created significant value.

2 Automation

Automation and standardisation means control, which is a high priority topic in todays rapidly changing business environment

3 Business value

Repeatable automatisms are an important element in reducing time-to-market. New cloud-native platforms and development solutions can greatly support these automations. The combination of the two brings significant business benefits.

Alerant Devops Services & Microsoft Azure Devops

The Journey to a Modern Enterprise is our proven approach to moving customers to Azure. DevOps is an offering which is part of this approach. Built from many years' experience of helping our customers to take the next step on technology modernisation. Through the implementation of core IT delivery processes, we can guide your company on its DevOps evolution..

Organization

People is the key to a successful Devops Organization Transformation. We have many years of experience how to help our customers on this Journey

Process

During our work we explore IT processes and break them down into steps. Thanks to our analytic thinking we understand the connections between steps and expected operation and can thus design automated solutions

Technology

We place a great deal of importance on continuous improvement and exploring new technologies that fits into our customers culture and knowledge.
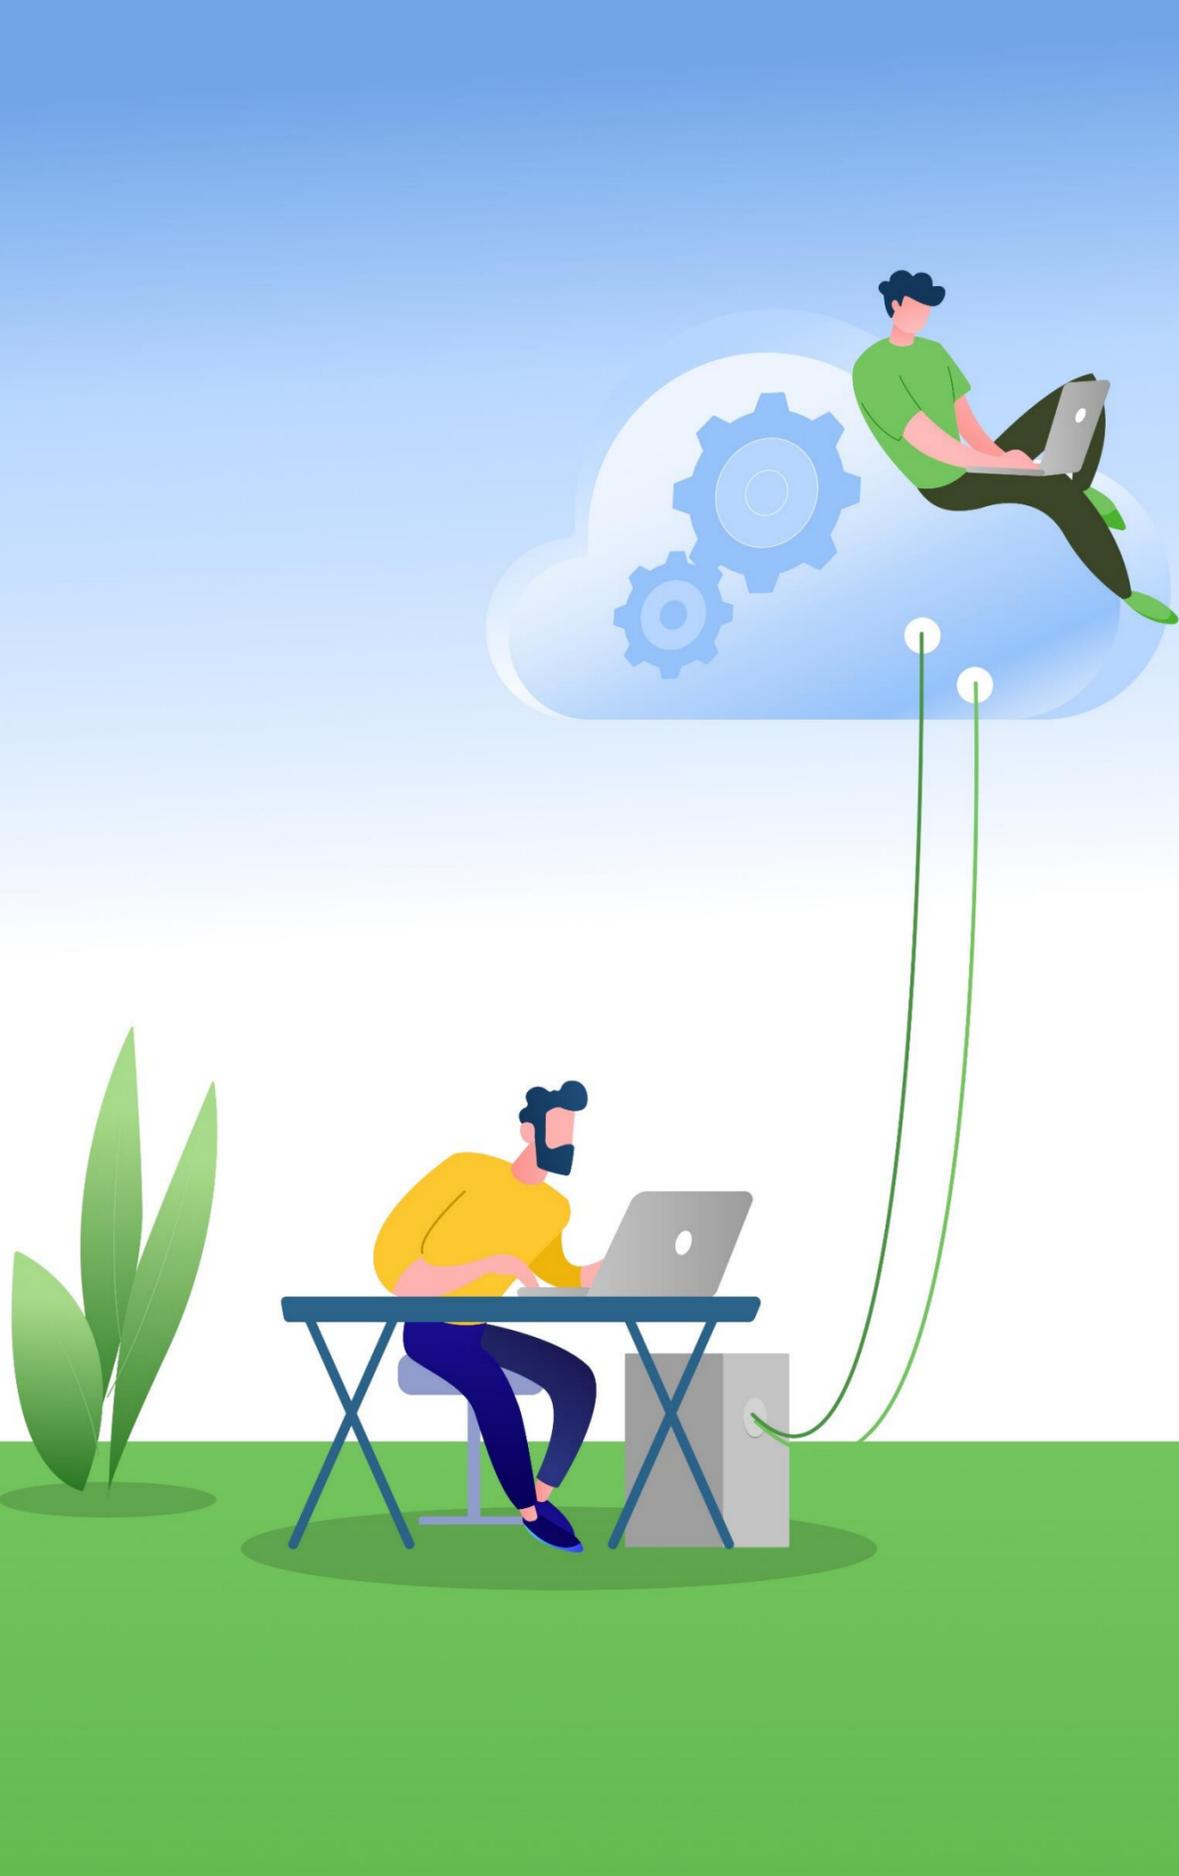

Customer success: MOL Inc

With the solution built on Microsoft Azure DevOps toolkit, and the requirements against the vendors as part of the solution, MOL has a central toolkit to standardize its software development and delivery processes. This gave MOL both the ability to build the software on its own and to standardize and automate the deployment processes. The build capability reduces vendor-lock, while by automating the deployment processes, it has created control, repeatability and fault-tolerance in the software delivery process.

The integration of the Microsoft Azure DevOps toolset, the associated best practices and Alerant's 2 decades of enterprise IT experience have created significant value.

Automation and standardisation means control, which is very valuable for a large company in the size of MOL.

Repeatable automatisms are an important element in reducing time-to-market. New cloud-native platforms and development solutions can greatly support these automations. The combination of the two brings significant business benefits.
