

SOLUTION MicSap

Build a bridge between SAP and the rest of your technological environment.

MicSap solution Unleash the power of your SAP data

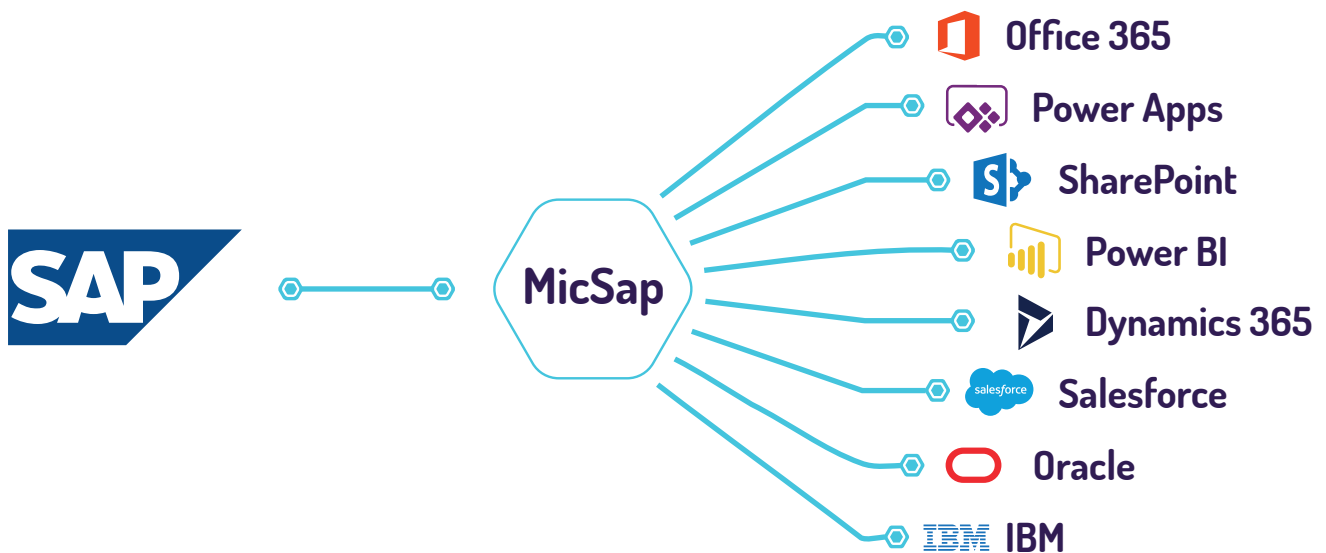

Give a new dimension to your activity by expanding its capacities with **MicSap** certified connectors for SAP ERP.

SAP integration has been made easy with our **MicSap** solution that paves the way for you for data integration in the cloud, BI and analytics, databases and process integration.

Ensure fast and inexpensive integration with SAP

For companies using SAP ERP and other business applications such as specific systems, Dynamics, CRM, Salesforce, IBM, ... Our **MicSap** solution for SAP integration is the key to maximizing your existing investments. Designed to achieve integration on time and on budget, **MicSap** automates data flows and real-time updates.

The **MicSap** solution offers you the possibility of setting up integration scenarios predefined and guarantees particularly fast commissioning.

Example: The process of sales, procurement, management of basic data or human resources.

ADVANTAGES

AN INTEGRATED BUSINESS VIEW

- Give management and the entire organization a complete view through the integration of SAP, for better planning and greater flexibility to deal with changing needs.

ELIMINATES THE COMPARTMENTALIZATION OF DATA

- Synchronize and share data across borders between companies, IT services and systems, by exposing and exchanging SAP ERP data to facilitate EDI transactions.

AUTOMATION OF TREATMENTS

- Reception and automatic entry of data extracted from supplier invoices (paper & electronic) with 100% visibility and traceability throughout the treatment.
- Receipt, processing and routing of customer orders to the team concerned for electronic validation, with full visibility for management on the statutes orders before they are entered in SAP.

BETTER PRODUCTIVITY

- By automating workflows and sharing data between SAP and other systems, employees spend less time switching between the other systems, manually enter duplicate data, contact other people to find information and avoid having to learn a whole new application, giving them more time to focus on their key goals.

INCREASE IN REVENUES

- By integrating your SAP ERP with other systems and providing opportunities for self-service, you make it easier for customers and partners to do business with you, thus increasing income opportunities. This integration of systems also reduces the man-hours spent collecting data, transferring data between systems and correcting incorrectly entered data, which makes your business more profitable.
