

Microsoft Data Security Immersion Experience Workshop

Understand how sensitive data is exposed, used and protected

Overview

Sensitive data today moves constantly across email, collaboration tools, cloud applications, and devices.

Many organizations lack visibility into where their data resides, how it is being used, and who has access to it—making it difficult to prevent data leaks, insider risks, or compliance issues.

The **Data Security Immersion Workshop** is an interactive, scenario-based experience designed to help you understand how data risks arise and how they can be identified, investigated, and mitigated using Microsoft Purview and Microsoft 365 capabilities.

This session provides a **first-hand view of how sensitive data is exposed—and how it can be protected in real-world environments.**

Objectives

The workshop is designed to help participants:

- Understand how sensitive data is created, shared, and exposed
- Gain visibility into data risks across Microsoft 365
- See how data-related incidents are detected and investigated
- Learn how organizations protect and govern sensitive information

Scope of the Workshop

During this interactive session, participants will:

- Follow a **real-world data risk scenario step by step**
- Observe how data is shared across users, systems, and workloads
- Understand how exposure risks emerge across email, Teams, SharePoint, and endpoints
- Learn how incidents are identified, investigated, and contained

Areas Covered

The workshop provides visibility across:

- Data discovery and classification
- Data loss prevention (DLP)
- Insider risk and data misuse
- Data sharing and access governance
- Compliance and regulatory protection

Approach

Step 1 — Data Risk Scenario

Introduction to how sensitive data is created and where exposure begins

Step 2 — Discovery & Visibility

How organizations identify where sensitive data exists and how it is used

Step 3 — Investigation

How data risks are analyzed and how exposure is understood

Step 4 — Protection & Response

How organizations protect sensitive information and mitigate risks

What Participants Gain

At the end of the workshop, participants will have:

- A clear understanding of how data risks emerge in modern environments
- Visibility into data protection and governance workflows
- Better awareness of how data exposure impacts their business
- Greater confidence in evaluating data security approaches

Expected Outcomes

- Increased awareness of data security risks and compliance challenges
- Better understanding of data protection capabilities across Microsoft 365
- Improved ability to evaluate and prioritize data security investments
- Identification of opportunities to strengthen data protection strategies

Duration & Format

- **Duration:** 90 minutes
- **Format:** Interactive, scenario-based workshop
- **Delivery:** Remote (Microsoft Teams) or onsite

👉 This is not a traditional workshop or presentation.

It is an **interactive experience where you see how data is actually exposed—and how it can be protected across Microsoft 365.**

After the Workshop, organizations may choose to:

- Explore deeper data security or compliance engagements
- Review current data governance and protection strategies
- Define next steps for implementation and risk mitigation

👉 **Reserve your spot and experience modern data security
in action**
