

Microsoft Data Security Workshop

See how sensitive data is exposed — and how it can be discovered, protected, and governed.

The Reality of Data Security Today

Sensitive data today is:

- Spread across email, Teams, SharePoint, and endpoints
- Constantly shared internally and externally
- Increasingly difficult to track and control

👉 Most organizations don't lack tools — they lack **visibility into where their data is and how it's being used**

The Security Challenge:

Most organizations face:

- Limited visibility into sensitive data
- Uncontrolled data sharing
- Growing compliance and regulatory risk
- Reactive rather than proactive data protection

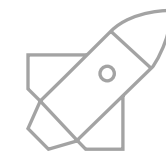

A new approach to Data Security

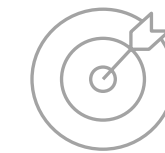

Modern data security requires:

- ✓ Visibility into where sensitive data resides
- ✓ Understanding how data is used and shared
- ✓ Automated protection and governance
- ✓ Integrated data security across Microsoft 365

Microsoft Data Security Immersion Workshop

Why this Workshop

What you will Experience

A hands-on, 90-minute interactive session designed to help you:

- Understand how data risks actually occur
- See how sensitive data is discovered and classified
- Explore how organizations investigate and protect their data

This is a **guided, immersive experience**:

- Follow a **real-world data exposure scenario step by step**
- See how sensitive data is identified across Microsoft 365
- Understand how risks are investigated
- Learn how data is protected and governed

- ✓ End-to-end data risk scenario
- ✓ Visibility across email, Teams, SharePoint, endpoints
- ✓ Data discovery and classification
- ✓ Protection and governance actions

Microsoft Data Security Immersion Workshop

Sensitive data risks are increasing in volume and complexity.

Many organizations lack visibility into how data is created, shared, and exposed — making it difficult to prevent data leaks and comply with regulations.

This workshop gives you a **first-hand experience** of how data risks emerge — and how they can be identified and mitigated across Microsoft 365.

Key Security Capabilities

- Data discovery and classification
- Data loss prevention (DLP)
- Insider risk protection
- Data governance and compliance

Why it matters

After this workshop, you will:

- Understand how sensitive data is exposed
- Gain visibility into data usage and risks
- Identify gaps in data protection
- Build confidence in your data security strategy

Engagement Format

- 90-minute interactive session
- Expert-led experience
- Small group, highly practical

Experience Modern Data Security in Action
