Power Platform + Azure

Pronto Apps Packs

Pronto Apps packs are a way to develop solutions for your business needs. They are a great way to get into and experience the benefits of Microsoft's Power Platform and Low Code Development. Pronto Apps are available for the following Power Platform services:

Power Apps

Power Automate

Power BI

Combine to create awesome solutions

Use Cases

- Pronto Apps are best suited for team or departmental use cases.
- Customers with business critical or advanced use cases will be better served by a custom development project where a solution architecture and development plan can be tailored to their specific requirements.

Multiple Pronto Apps Packs can be combined to cover more complex scenarios:

- A Power Apps Pack and a Power Automate Pack can be combined for a fast, onboarding solution with Approvals.

- All three packs can be combined for a solution for interdepartmental request that includes a dashboard for management.

- Multiple Power Apps packs can be combined to cover solutions with different user roles and jobs.

- Multiple Power Automate pack can be combined to cover more complex workflows.

Features & Benefits

Quickly develop applications tailored to address unique and immediate business requirements

Improve decision making by putting data-driven insights into everyone's hands

Rapidly build low-code apps that modernize processes and solve tough business challenges

Streamline repetitive tasks and processes

Modernize, automate, and innovate faster to eliminate inefficiencies across any part of the business.

Accurate financial & operational reporting and increased regulatory compliance

What's Included

Fast Power Automate Pack

- A Power Automate Cloud Flow to automate one business process.
- Ability to send notifications, reminders and manage approvals.
- Ability to include business rules in the logic of the flow.
- Connect to and integrate up to 3 different web services (ETL data operations not recommended)
- Ability to include AI and RPA functionalities (additional costs and requirements apply).
- Secure authentication using either the user's or a service account.
- Basic error handling capabilities and notifications to support team.

What's Included

Fast Power Apps Pack

- A Canvas Power App with either landscape (web) or portrait (Phone) orientation.
- Ability to Create, View, Edit and Delete items using a form.
- Ability to view all existing items in a gallery.
- A home page to welcome users and provide instructions
- Simple and intuitive UX.
- Single Sing On using user's Microsoft account.
- Creation of one table to store items and up to 5 secondary/reference list

What's Included

Fast Power BI Pack

- A one-page Power Bi Report or Dashboard.

- Import information from one existing data source.

- Use of existing connectors to services from Microsoft, AWS, Google and more.

- Configuration of up to 6 visuals or charts to display information.

- Configuration of up to 10 measures or KPIs using DAX.

- Ability to use slicers to filter the information displayed.

- Ability to use natural language questions to further explore your data.

- Single Sing On using user's Microsoft account.

- Ability to display the report in a SharePoint Online site or a MS Teams channel.

Licensing & Features

- User Licensing
  - For Power Apps and Power Automate no additional user licenses will be required beyond what is included with a M365 subscription.
  - Power BI users will require to be licensed by any of the following means:
    - M365 E5 license
    - Power Bi

- Features
  - To avoid additional licensing or costs the following features are out of scope:
    - Use of premium connectors in Power Apps or Power Automate.
    - Use of premium or advanced features.
    - Use of preview or deprecated features.

Security & Data Sources

- Data Sources
  - To avoid additional licensing requirements when needed information will be stored in either SharePoint Online or Dataverse for Teams.
  - In the case of Power BI, import or Direct Query operations using any existing connector is included.
  - On-premise or data sources that require the use of a Gateway are out of scope.

- Security
  - Security architecture is limited by the out-of-the-box functionalities available in SharePoint Online or Dataverse for Teams.
  - Generally, the supported scenarios are:
    - All users can edit, view or delete all data.
    - View, edit or delete permissions are limited to the items created by user only.
  - Use by existing external/guest users that are licensed is supported. Restrictions might apply.

Governance & ALM

- Governance
  - New environments, sites or workspaces will be created as needed for development or testing of the solutions.
  - For production solutions will be deployed to a Dataverse for Teams or the default environments.
  - Customers with existing custom configurations, DLP policies or procedures will need to configure and provide all the required environments or workspaces.
  - Administration, configuration or support of the client's infrastructure is out of scope.

- ALM
  - Power Apps and Power Automate flows will be developed inside Solutions.
    - When deploying to test or production environments a managed version of the solution will be exported and imported.
    - An unmanaged copy of the final version of the solution will be part of the project's deliverables.
  - Use of deployment pipelines, Azure DevOps or similar are out of scope.

Requirements

- The client will provide the following as reference:
    - Power Apps: An existing form or mock-up.
    - Power Automate: A documented, step-by-step, process or diagram.
    - Power Bi: An existing report or mock

- The client will provide all:
    - Text or templates to be used on email notifications.
    - Option-sets for choice or lookup fields.
    - Titles or any other wording required.

- The client will provide a service account for development and operation with the following:
    - A M365 license (Business Basic or Better)
    - Power Apps: Power Apps Premium per User
    - Power Automate: Power Automate Premium per User
    - Power Bi: Power BI Pro or better license.
    - All licenses will be purchased and provided by the client.

- The client will define and make available a single person to serve as Product Owner for the duration of the project.

- The client will define and make available at least one person per role for UAT.

- The client will define and share the account(s) of whom will be responsible of supporting the solution on their side.
