Project: Smart Adoption of Copilot for Microsoft 365

This service is designed for teams that use Microsoft 365 as a cloud-based collaboration, communication and productivity tool and are looking to explore Copilot for Microsoft 365.

You are currently looking for an AI-based digitization solution that fits their Microsoft 365 environment. In addition, if you are looking to streamline processes and integrate them with Microsoft 365 Copilot to maximize the use of their tools, this service will help your business.

The main objective of this service is to provide you with an artificial intelligence plan tailored to your organization's needs. You will learn about the investment required and the measures necessary for its adoption. In addition, learning artificial intelligence techniques will be prioritized. A use case tailored to your business will also be carried out.

Introduction to Copilot and AI Consulting for Business

During this intelligent implementation, we help you identify your readiness level to deploy Copilot for Microsoft 365, address any obstacles to a successful implementation, and assist you in the implementation and adoption plan for Copilot for Microsoft 365 across your organization.

The main activities of this service are:

- Identification of relevant data sets for the implementation of AI algorithms, in this way you will be able to have a better understanding of your business information.
- Advising you on the creation of data governance protocols with AI regulations, guaranteeing their validity and veracity when applying AI.
- Analyzing AI tools for data management, making recommendations based on the reality and investment capacity of your SME.
- Guiding you on how AI techniques can derive valuable information from existing data to drive strategic decision-making.
- Training you in the strategic use of AI techniques in data management.
- Developing and executing a use case adapted to the business, related to the application of artificial intelligence.

The following are the deliverables according to best practices and recommendations for adopting AI:

- Artificial intelligence plan with budget and Measures
- Data source inventory (SharePoint Online, Fileshares, databases, etc.)
- List of data source sites available for Copilot and how to exclude the rest.
- Prescriptive Government for collaboration and Copilot
- Microsoft AI Tools Workshop
- AI Techniques / Copilot Workshop (User persona / success stories by industry)
- Microsoft AI Strategy Workshop
- Copilot Studio PoC to answer questions based on information on a SharePoint site or web page. Includes site creation
- 1 annual Copilot license for M365. (Free for one year, list price after the first year. Renewal will be automatic; you can cancel at any time before the renewal date)
