

Azure Migration – Current State Discovery & Assessment Lite Program

4–6 Week Assessment

Modern IT infrastructure is complex, stretching from the data center to the cloud. During this 4–6 week assessment, Align helps companies gain an accurate picture of a pre-defined portion of their internal infrastructure.

We provide you value by outlining a plan and process to modernize your IT, rationalize your data center portfolio and determine what you can migrate to the cloud.

Why Assessment Lite: Our goal is to quickly give you a snapshot into your infrastructure through various reports and share best practices to help outline and jumpstart a broader transformation program.

Get Started: We focus on a sample set of 250 assets.

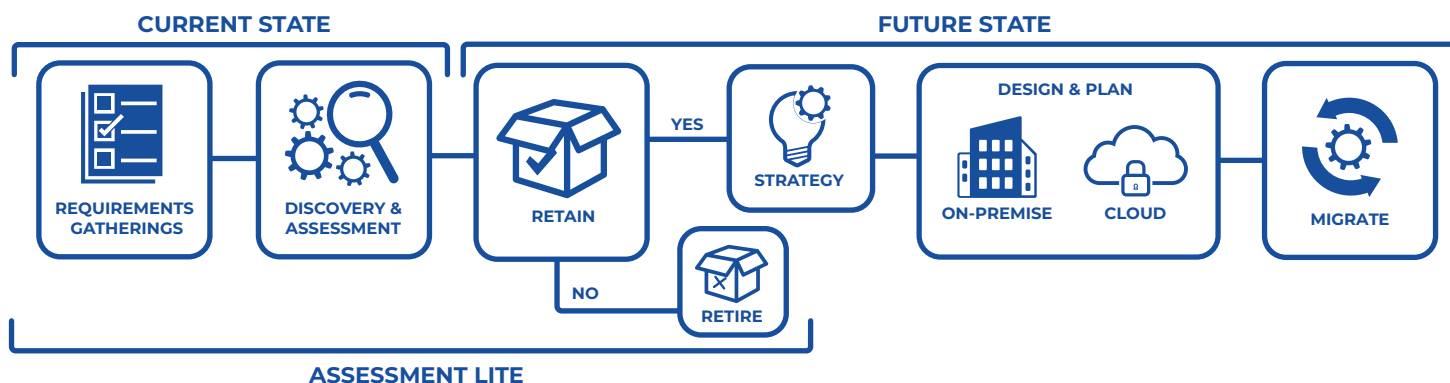

Step One: Pre-Project Scope of Work Call

- Define client goals, timeline and project scope
- Gather available client inventory & asset data
- Review program schedule & identify a point of contact from the client side

Step Two: Discovery & Assessment Lite Audit

- Conduct a non-intrusive physical inventory on-site (we do not touch assets or trace connectivity/cabling)
- Apply agentless monitoring tool to perform logical discovery of virtual servers and current and unknown software for the sample set
- Evaluate collected data and develop management report of the 250 discovered assets for the client presentation

Full Migration Solution & Assessment Lite

This assessment includes one data center with 250 assets (includes server, storage, network, physical/virtual assets) (i.e., approximately 5–10 cabinets). Before proceeding, the client must review and agree to security requirements and provide us a point of contact so the Align team can work with and install our non-intrusive logical discovery tools.
