

Name:	KSeF in Dynamics 365 Business Central: 2-hour Assessment
Primary product:	Dynamics 365 Business Central
Service type:	Assessment
Duration:	2 - hour
Pricing:	Free

1. Summary - briefly describe the purpose or goal of your offer:

See how you can prepare your company to national e-invoicing system KSeF for Microsoft Business Central and Navision.

2. Description - must provide enough detail for customers to clearly understand your offer:

KSeF is a national e-invoicing system implemented in Poland. It aims to facilitate and streamline the process of issuing, receiving, and archiving invoices electronically, promoting efficiency and reducing paperwork for businesses, government entities, and individual taxpayers. Starting from 1st July 2024, KSEF will be mandatory for all relevant parties, ensuring widespread adoption and compliance.

The subject of the assessment is how we can implement the KSeF in Microsoft Business Central and Navision ERP Systems. The purpose of our assessment is to gather essential information required to create a personalized action plan and quotation for the implementation process. This service aims to provide the client with a comprehensive evaluation of how to best align their existing systems with the KSeF requirements and an estimate of the costs and resources needed for the implementation.

During the meeting, the expert team will collect the necessary information to create a detailed quotation. The quotation will include costs related to implementation, system adjustments, as well as potential training and support expenses.

The service applies to implementation both on the on-premises and cloud platforms. The ability to provide services is made possible by providing a solution by the manufacturer.

Please note:

- The service can be performed remotely.
