

Strengthen your cybersecurity

Cyberattacks continue to rise avalanche-like. Despite this, most Nordic companies are far too poorly prepared. We are happy to help you increase security with Cyber Security Lifecycle Management today.

Cloud services with ongoing updates are a convenience that most people don't want to be without. However, constant updates also require constant security management. If you have difficulty keeping up with the work internally, Cyber Security Lifecycle Management is a safe and smooth solution. Among other things, the service is that our experts continuously help you identify, get started and stick to good safety procedures.

Are you using Microsoft 365? Congratulations, then you are well placed to maximize existing features in combination with a number of pro-active recurring security activities that our experts suggest. All activities and routines are compiled monthly in clear reports that we go through together to ensure that we are on the right path.

Strategic, tactical and operational process

Benefits

“By using Altitude Cyber Security, security is now naturally prioritized and integrated into our IT processes”

Per Lindblad, M&A and IT Manager - AQ Group

- Smooth security solution that becomes a natural part of your IT processes.
- Starts from and maximizes security features in your existing Microsoft 365 environment.
- Project management creates structure and drives the work forward. Opportunity to meet experts.
- Ongoing risk analysis of identities, devices, applications and data.
- Tailored monthly reports that, update you on news in the cloud, suggest priorities, and show the way forward.
