

Dr Migrate

ACCELERATE CLOUD TRANSFORMATION

with AI-powered
insights and
automation.

Overcome migration complexity. Maximize cloud opportunity.

Dr Migrate changes the game. It's the first and only AI-based cloud migration platform that automates the hardest parts of the migration process, taking months off your transformation timeline, while also offering intelligent insights to help maximize return on investment and improve your bottom line.

80%

less discovery and
assessment time

24hrs

to obtain
actionable insights

Up to
30%

cloud savings on
assessed workloads

Rapid, precise, predictable cloud transformation

Dr Migrate uses the power of AI to make migrations more efficient, and shorten cloud time-to-value. Dr Migrate's AI provides precise guidance that unlocks rapid opportunities, cost savings, and confident decision making.

Overcome migration complexity

Shorten the time to value with increased speed and efficiency

Accelerated cloud transformation

Ultra-fast, high precision analysis of the environment speeds up transformation timelines.

Improved visibility and migration efficiency

Real-time insights allow migration squads to execute faster with greater control.

Maximize cloud opportunity

Maximize ongoing return on investment with automated, data-driven insight

Predictable, AI-assisted planning and projections

AI-assisted business change helps to unlock more value with greater certainty.

Optimized resources and lower TCO

AI advisors identify optimal modernization pathways to PaaS or SaaS, to lower TCO.

How it works

Dr Migrate performs a high-speed, in-depth inventory of your entire technology estate, then automates right-sized application modernization paths and project plans. Relevant, actionable insights are delivered in real-time through intuitive dashboards and reports, to help identify and prove value, assist with decision making, and drive resource optimization.

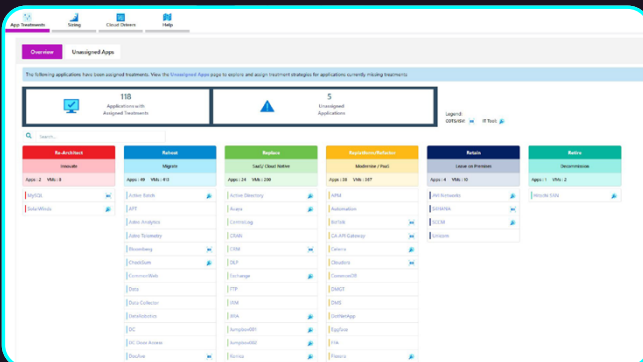

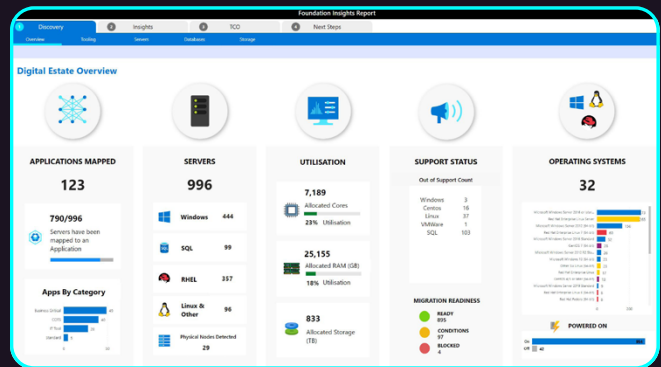

Take cloud migration to the next level

Rapid, Deep AI Discovery

Process millions of data points to assess your entire infrastructure and application environment.

- Agentless data collection
- Native integration with Azure
- Real-time dashboard reporting

AI-Driven Application Treatments

Guided "6R" app treatment that automatically feed TCO estimates.

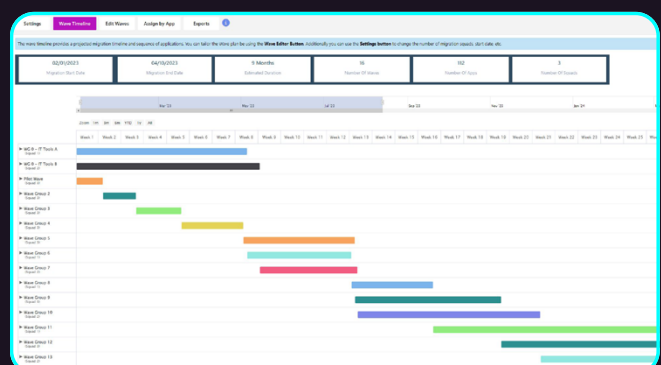

- Application dependency mapping
- Application complexity calculator
- Modernization pathway advisor (per server and application)

AI-Assisted Wave Planning

Rapidly builds and adjusts optimized migration plans based on:

- Application sizing and complexity
- Data centre/geolocation
- Network dependencies

Drive better business outcomes

Optimization and Cost Savings Engine

Maintain optimal ongoing Total Cost of Ownership, including:

- Reduced CPU core utilization
- Licensing optimization
- Heightened infrastructure efficiency

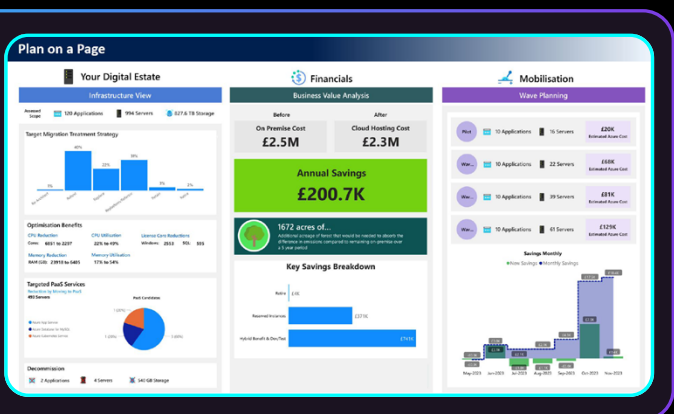

Executive Reports and Business Case Builder

Detailed, real-time dashboards and exportable presentation slides, including:

- TCO analysis over time
- Payback periods
- Sustainability reports

Plan on a Page

It's time to transform with confidence

Avoid migration complexity and maximize the cloud opportunity with an AI-powered platform that accelerates cloud transformation, and unlocks insights for unparalleled cost optimization and ROI.
