WordPress Integration

After generating your blog post in VibeysAI, you can utilize this WordPress automation tool to automatically publish the content to your WordPress website, streamlining the entire process.

Install WordPress REST API Authentication Plugin

Navigate to WordPress Admin Dashboard:

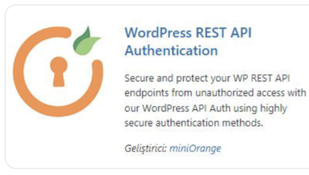
Log in to your WordPress admin dashboard using your credentials.

Install the Plugin:

In the WordPress dashboard, navigate to 'Plugins' > 'Add New'.

Search for 'WordPress REST API Authentication' in the plugin search bar.

Click on 'Install Now' and then 'Activate' to activate the plugin.

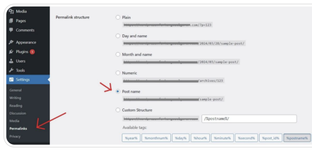


Create a Bucket

After installation, make sure that JWT Authentication is activated in the plugin settings.

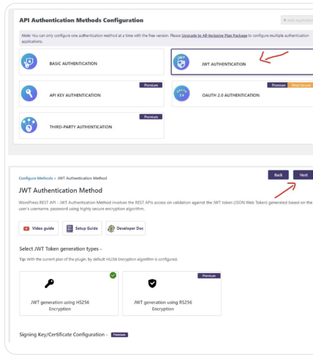
Two-factor authentication must be disabled on your WordPress site.

From the panel, go to Settings -> Permalinks and select the 'postname' option



Permalink Options

Once the installation is complete, follow the steps below from the customization menu and then press the finish button.



API Configuration

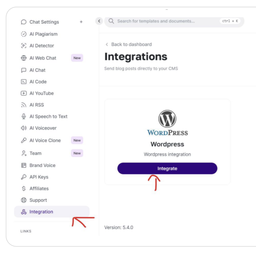
WordPress & VibeysAI Integration

You'll notice a new "Integrations" menu on your user dashboard.

Go to the Integrations page and follow the on-screen instructions to enter your WordPress credentials (Domain, Username, and Password) to complete the integration.



Integration

Share & Publish Content

Visit your documents page in VibeysAI, where you'll see a "Publish" button in the top right corner. Click this button to start the process of publishing your document to WordPress.
