

GENERAL DOCUMENTS AI

The way
we work
is changing

KONICA MINOLTA

Makes Change Happen

Microsoft 365
& Power Platform

Azure AI Document Intelligence

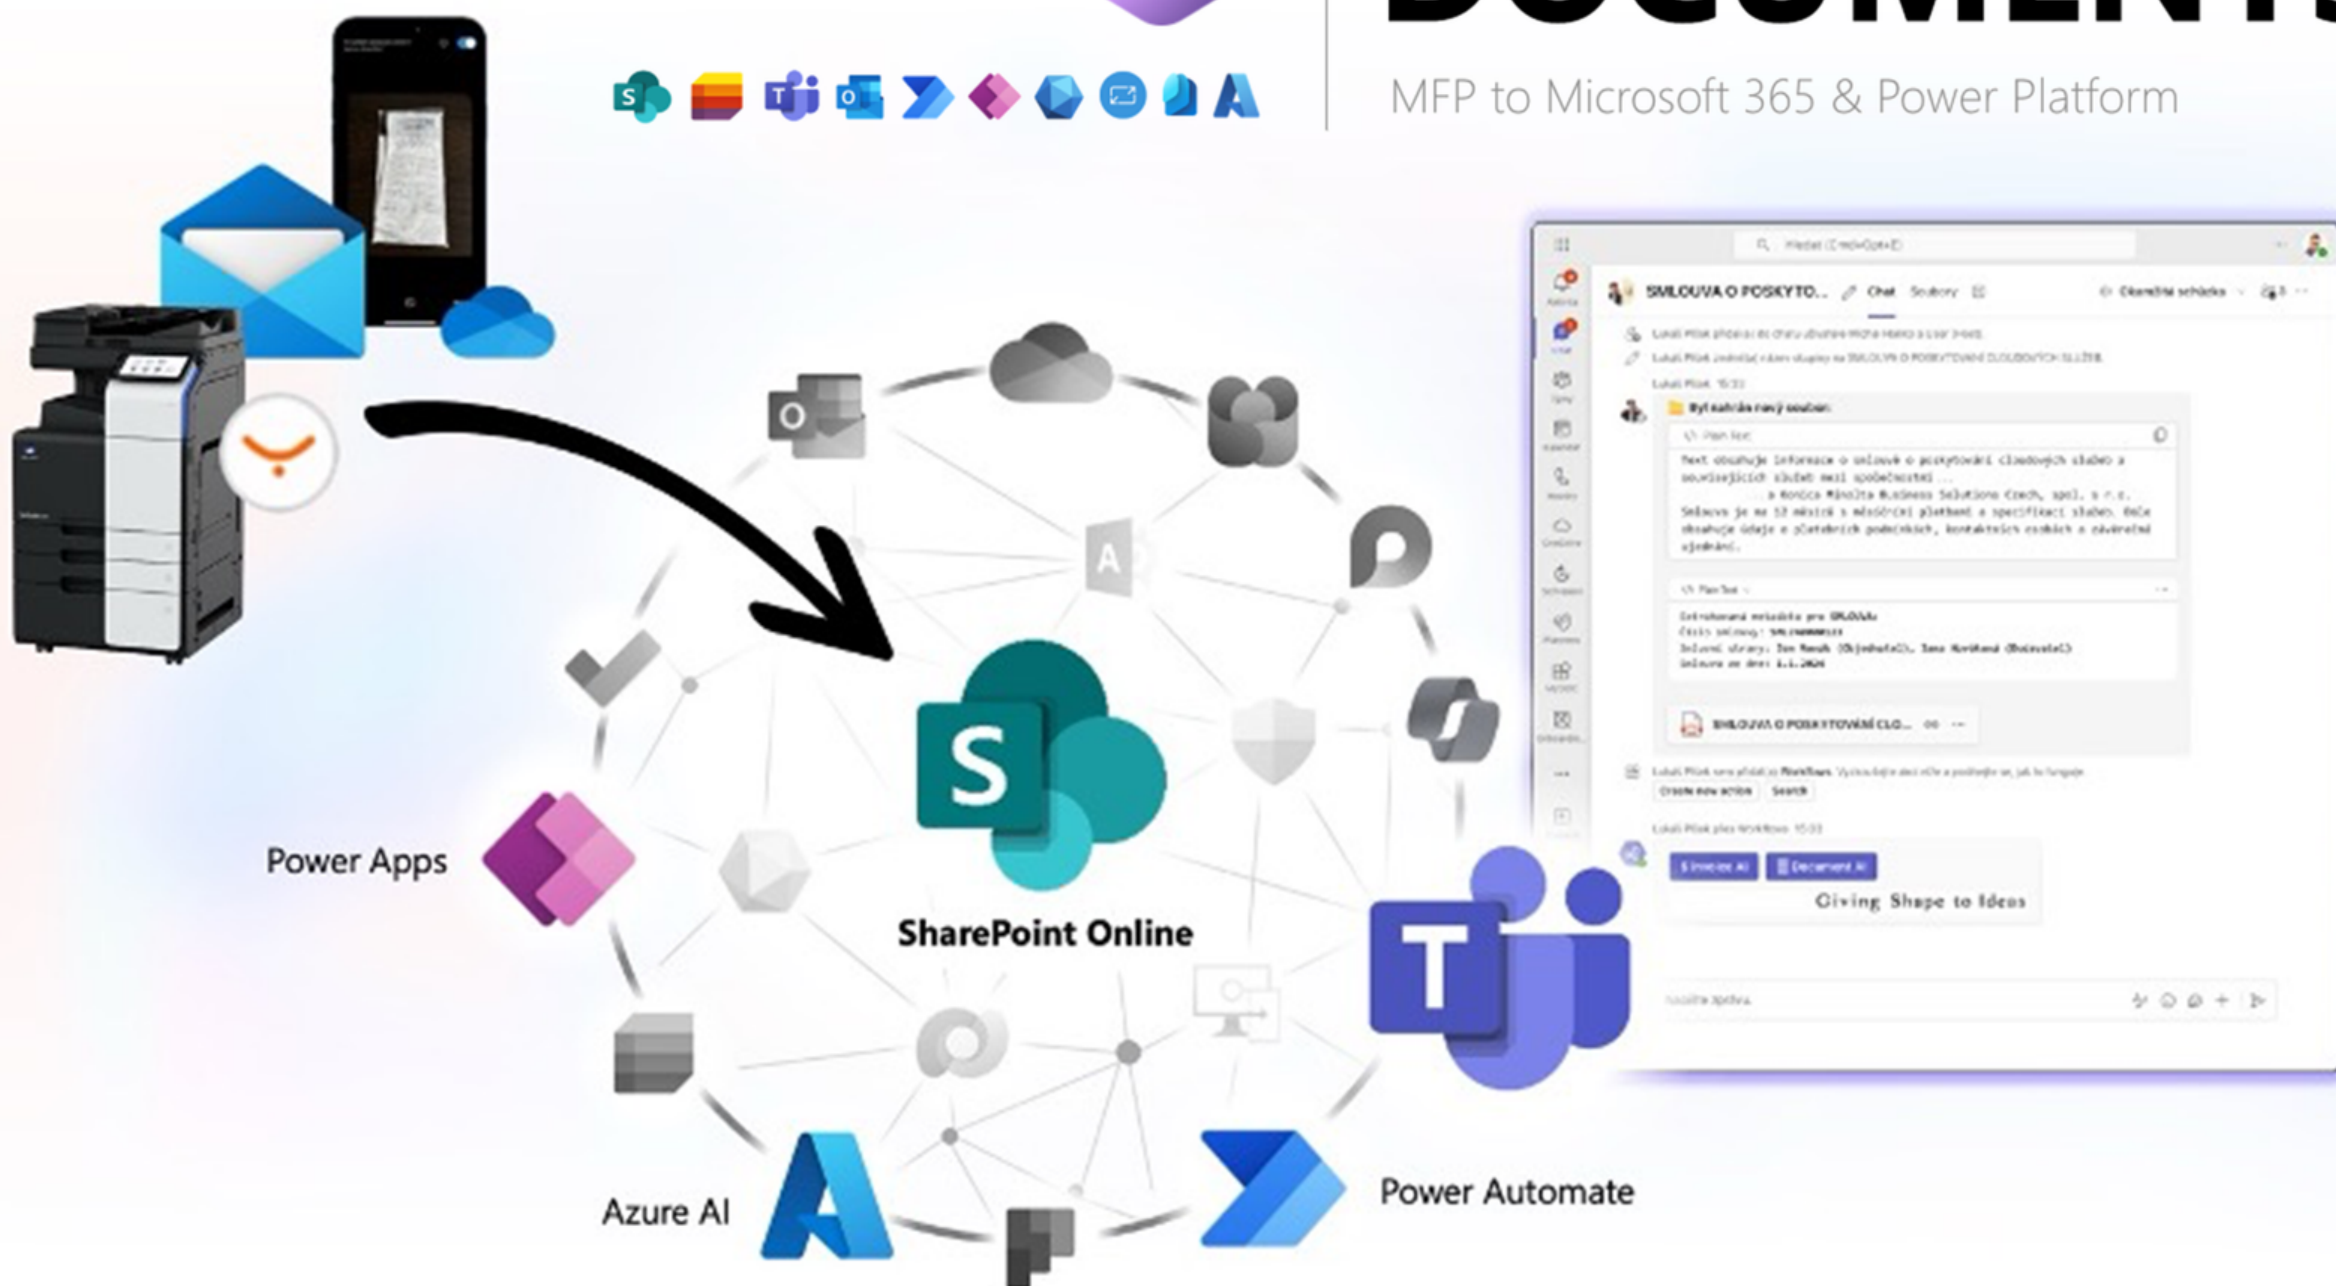

For several years, we have been working within Konica Minolta Global R&D on developing **Intelligent Information Management (IIM)** platform, which includes numerous back-end services enabling the use of Azure AI Document Intelligence for various automated document processing scenarios using artificial intelligence. This platform offers a robust API that facilitates integration with other modern data and application platforms, such as Microsoft Power Platform, through which we make these services available to users in the context of their dailywork.

GENERAL DOCUMENTS AI

Contracts
Invoices
Receipts
Orders

Thanks to the innovative technologies of Microsoft Azure AI, we can automatically identify common types of processed documents, extract corresponding set of metadata and generate a concise summary of their content. These piece of information, along with a link to the document stored in Microsoft 365, are automatically sent to the user in Microsoft Teams environment in the form of an Adaptive Card, where further processes and solutions in Microsoft Power Platform follows.

This simple yet but absolutely revolutionary innovation unlocks the infinite potential of our productivity, supports effective collaboration in today's digital world, and significantly contributes to the digitalization of corporate content and related processes.

Just
**SCAN THE
DOCUMENT**

Imagine a world, where „just scanning a document“ allows it to be instantly transferred with all its important information into the Microsoft 365 cloud environment, through automation and artificial intelligence, giving the concept of digitalization a whole new dimension!

A vision of the future? No, the reality
of today with **GENERAL DOCUMENTS AI**
by Konica Minolta.

WHY consider GENERAL DOCUMENT AI?

It's simple but revolutionary tool, which allows companies automatically analyze and input documents into Microsoft 365

Supports Microsoft 365 user adoption by automatically inputting documents (scans of paper documents or email attachments) directly into SharePoint Online and MS Teams, where further collaboration and communication on this content takes place.

Integration with MS Teams

in the form of a chat with a summary of the document, extracted data according to its type, with a link to the document stored in SharePoint Online, which can be further shared, possibly with additional features and controls of adaptive cards

It helps users to save a lot of time

because they don't need to consider where to save documents, manually rewrite information, or create their summaries when they need to send the documents to someone

Automation of document processing

in the Microsoft Power Platform environment, or in other subsequent internal systems."

Advanced security features of Microsoft Azure

to ensure the secure processing and storage of documents. This includes compliance with your internal policies as well as industry standards and regulations.

AI for everyone

With minimal initial and operational costs!
