visionera
DECODING DOCUMENTS AT SCALE

Augments human understanding of unstructured data through data science tools in each stage of document data integration.

The platform can automatically recognize and extract valuable data from diverse documents like scanned forms, invoices, PDF files, emails, etc., and transform it into the desired format. The platform's main focus is minimizing or eliminating the need for any manual intervention by extracting information from different sources automatically.

The Build

Using a combination of AI technologies like Computer Vision, OCR, Natural Language Processing (NLP), and Machine/Deep Learning we **decode** the data and use uniquely formulated Triangulation logic for data validation to **decipher** extracted information. VisionERA can handle any document type and integrates with your existing tech stack. We have trained VisionERA using real-world conditions and optimized to deliver high levels of automation and accuracy in real-time enterprise scenarios.

What makes VisionERA the best IDP platform?

- ✓ Get started within an hour
- ✓ Self trainable ML algorithms
- ✓ DIY configuration with Drag and Drop UI
- ✓ Seamless AI-Human interface for 100% accuracy
- ✓ Easy Integration
- ✓ Platform independent, cloud-native
- ✓ Highly flexible and scalable platform
- ✓ Competitive SaaS based pricing
- ✓ IDP Insight board*

IDP Insight board

IDP Insight board is our true differentiator! It extends platform capabilities beyond data extraction to draw usage analytics on the documents, Document automation, FTE Equivalent, Savings, earnings through higher throughput, ROI and many more.
