

# SEAL Integrated Platform

Student Experience for Augmented Learning

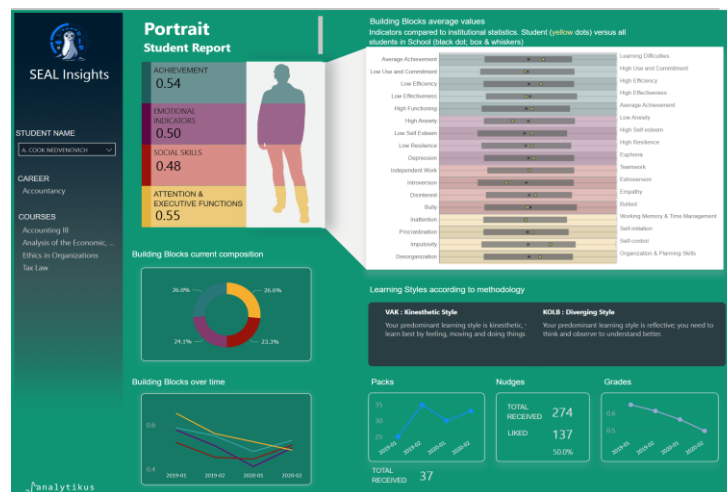

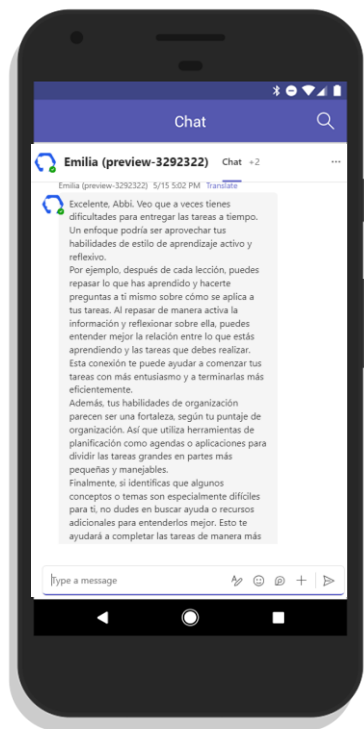

# Augmented Learning Portrait

Transform the student experience through personalized accompaniment.

"... Portrait [...] accompanies the student experience through bots. It also allows teachers and Program Directors to have a characterization per student and enhance student counseling services, making immediate decisions to offer personalized support during the academic cycle."

Lenin Landázuri, Chief Technology Officer-Universidad de las Américas (UDLA)

Portrait is an artificial intelligence solution that personalizes the learning experience by analyzing each student's individual processes and offering targeted support and recommendations.

Proactive AI agents that support academic performance and engagement.

Pedagogical support

AI Tutor

- Impact:
  - **Improved academic performance:** Provides personalized recommendations that help students improve their performance.
  - **Increased motivation:** Offers continuous and personalized support, which increases student motivation and engagement.
- Portrait uses data from a variety of sources, such as the LMS and surveys, to analyze and understand each student's learning journey. Uses machine learning models to:
  - **Characterization of learning:** Analyze how each student learns and what factors affect their performance.
  - **Personalized recommendations:** It offers advice and pedagogical strategies adapted to each student.
  - **Ongoing Support:** Provide reminders and constant support through a virtual assistant.
  - **Data analysis:** Use a proprietary learning analytics framework to interpret digital signals and generate insights.

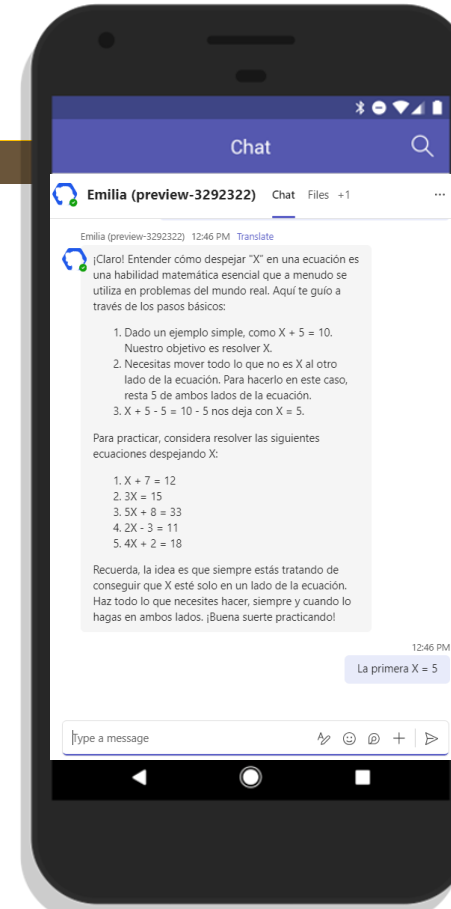

# Augmented Learning Learning Buddy

24-hour personalized academic support.

Learning Buddy is an artificial intelligence solution that offers personalized and continuous academic assistance in various subjects, helping students close knowledge gaps and master the most important topics.

- **Impact:**
  - **Ongoing academic support:** It provides one-on-one assistance in key subjects such as mathematics, physics, and chemistry.
  - **Closing knowledge gaps:** It helps students better understand concepts and improve their academic performance.
  - **Increased self-efficacy:** It provides timely and relevant support, which increases students' confidence in their abilities.
  - **Performance Improvement:** It facilitates understanding of difficult topics and promotes academic success.
- It uses machine learning models trained on a knowledge base of university courses and content. Provide real-time answers and support to students, by:
  - **Personalized assistance:** It offers help in specific subjects based on the needs of each student.
  - **Pedagogical responses:** Generate answers to academic questions with a pedagogical approach.
  - **Material recommendation:** Suggest additional materials and resources to reinforce learning.

*"... Personalization  
has the power to  
bring the  
performance of most  
students to the level  
of the top 2-3% of  
their reference  
group.."*
