

Azure purview accelerator.

ANS

Think Bigger.

Empower consumers to find valuable, trustworthy data.

Azure Purview is a unified data governance service that helps you manage and govern your on-premises, multi-cloud, and software-as-a-service (SaaS) data.

This accelerator will deliver an out-of-the-box deployment for Azure Purview, enabling you to create a unified map of your data from your data sources. It will be configured to integrate with data sources either on-premises using the integrated runtime or to a data source in Azure. Using this Accelerator, you'll also be able to search for data using technical or business terms and easily understand your data by browsing those associated terms.

What are the key benefits?

01 Get up and running quickly

Get up and running with Azure Purview in your organisation following best practice to quickly start discovering your data.

02 Easily classify data

Quickly and easily classify data using build-in and custom data classifiers.

03 Quickly access insights

Gain insights into the location and movement of sensitive data across your data landscape.

Why use an ANS Accelerator?

Rapid delivery

Using a repeatable and scalable framework, we can ensure that you are able to see results from the project quickly in order to deliver value back to your organisation.

Collaborative working

We take a collaborative approach to refinement, implementation and rollout so you can rest assured that your data is safe and secure and not at risk of exposure.

Outcome focused

We focus on the outcomes required for the project both commercially and technically to remove any risk.

The ANS Purview accelerator is designed to be delivered quickly using ANS' proven templated architecture and is designed to provide quick visibility on your existing datasets.

This will enable you to:

- ✓ Automate and manage metadata from hybrid sources.
- ✓ Classify data using build-in and custom data classifiers.
- ✓ Label sensitive data across SQL server and Azure data sources.
- ✓ Quickly identify the sensitivity level of your data.

Once deployed you will have automated visibility across your on-premise or Azure data sources enabling you to quickly identify sensitive data and search for core terms across this data.
