

ANS Microsoft Data Security Workshop

The deployment of Microsoft Purview Solutions involves using real data to identify security and regulatory risks.

These solutions are deployed using Microsoft Funding. Collaborative workshop sessions are conducted to help remediate and mitigate these risks. Finally, recommendations and next steps are provided to ensure ongoing compliance and security.

Approach

ANS will carry out 2 x 2-hour online workshops to define the scope of the engagement. From there M365 Purview is configured, automated discovery takes place, findings are analysed and then reported back in a final 2-hour workshop.

Outcomes

- ✓ Automated discovery of sensitive and stale data in:
- ✓ SharePoint Online
- ✓ Exchange Online
- ✓ OneDrive
- ✓ Teams
- ✓ Endpoints
- ✓ On-premises File Share (Optional)
- ✓ ANS will provide a detailed report on all the finding and analyse from the above and provide recommendations

Benefits

You'll benefit from:

- ✓ Understand what data you have, communication compliance, and insider risk
- ✓ Detailed report with recommendations on what to do next
