

Security Check.

The ANS Security Check is a structured, outcome-focused assessment designed for organisations that have already modernised their security estate and operations and are now looking to move faster - adopting AI, digital platforms and innovation at pace without increasing risk.

As security maturity increases, the challenge is no longer basic protection or visibility. Instead, organisations must ensure their security posture, resilience, tooling and operating model can scale with rapid change, regulatory pressure and evolving threats. This engagement provides a clear, evidence-based view of how ready your current environment is to operate at the frontier of modern security.

What is Security Check?

The Security Check is a comprehensive review of your security environment, designed to validate that your current security capabilities are fit for purpose today and ready for what's next. It goes beyond point-in-time configuration checks, focusing instead on:

Security posture

How effectively risk is reduced across platforms and data.

Resilience

Your ability to detect, respond to and recover from disruption.

Tooling effectiveness

Whether your security investments are delivering value.

Security operations

How well your operating model supports modern, digital ways of working.

Is a Security Check right for you?

It's ideal for organisations that:

- ✓ Have already modernised their security estate and core platforms.
- ✓ Are using or planning to adopt cloud, data and AI services at scale.
- ✓ Want confidence that their security model can support rapid digital change.
- ✓ Need reassurance that governance, resilience and compliance remain strong.
- ✓ Are looking to optimise existing security tooling rather than add complexity.
- ✓ Want a clear, independent view of security maturity and next-step priorities.

It is particularly valuable for organisations moving from optimisation to leadership - where security must become an enabler of innovation, not a constraint.

What outcomes can you expect?

At the end of the Security Check, you will get:

A clear view of your current security posture and maturity across key domains.

Insight into how resilient your environment is to modern threats and disruption.

Validation of whether your security tooling and platforms are delivering value.

Identification of gaps, overlaps and opportunities for simplification.

Prioritised, actionable recommendations aligned to business risk and innovation.

Confidence to adopt AI, digital and cloud capabilities at pace, securely.

The outputs are designed to be practical and decision-ready, supporting both technical teams and senior stakeholders.

Why use a Security Check?

- ✓ **Clarity**
A structured, independent assessment of security readiness
- ✓ **Confidence**
Assurance that innovation and AI adoption are well-governed
- ✓ **Focus**
Prioritised recommendations based on real risk, not theory
- ✓ **Value from existing investments**
Optimising what you already have
- ✓ **Board-ready outputs**
Clear insights that support informed decision-making
- ✓ **A defined path forward**
From modernised security to frontier capability

Rather than slowing progress, the Security Check helps ensure your security approach keeps pace with the business, enabling growth, resilience and trust in an increasingly digital and AI-driven world.
