Any4m

Any4m – Backend as a service

If you are a business owner, you know that technology is constantly evolving and changing. Keeping up with the latest trends can be difficult, but it is essential to stay competitive.

Our Backend as a Service offers robust capabilities and everything you need to build modern web and mobile applications without a designated backend team.

With our platform, you ship your products faster and save thousands of hours setting up your custom backend and infrastructure.

No more waiting or dependencies between teams. For a frontend developer, this is a dream come true.

The service includes

- Access to world class support
- API Management as a Service (authentication included)
- Data Management as a Service (backup/import/export)
- Domain model as a Service (database included)
- Identity as a Service
- Index as a Service
- Scheduling as a Service
- Search as a Service
- Web-sockets as a Service
- Workflows as a Service

Any4m

Architecture

With a single endpoint, you get all the functionality you need to build dynamic and scalable applications in a fully managed infrastructure.

Johan Kvick

Project Manager - Digitization

"After an evaluation of several systems, Any4m's platform was chosen. We invest heavily in digitization right now and we needed an interactive tool which we easily could adapt to our complicated processes and projects, not the other way around. With Any4m, we have found a cost-effective digital platform that is fully integrated with Microsoft Teams. This makes the access extremely easy for all our employees and the ongoing work with Any4m helps us to create innovative solutions in automation, monitoring and standardization. ”
