Facts & Features

Insights helps you make the right decisions using your own data

- » Integrates with Microsoft 365 & Exchange
- » Dashboards built with Microsoft Power BI
- » Based on live dataset from your booking solutions
- » Monitor and show reports for exactly what is relevant for your organization
- » Understand how your existing space is used to make utilization improvements

MONITOR EXACTLY HOW MEETING ROOMS, DESKS, AND RESOURCES ARE USED

The Insights module offers you an access point to a dashboard where you can build reports based on your own dataset from Resource Central and other solutions from Add-On Products.

Stay competitive and make data-driven decisions

Uncover a multitude of insights, such as

- » What times of day at the office are busiest?
- » Are there enough workstations to accommodate the team at peak hours?
- » Do you have enough small meeting rooms to accommodate one-on-one meetings and huddles?
- » Is there a difference on spend catering costs based on persons, locations, buildings, months?

...and more.

Adapt your workspaces to suit the future of your business

Shed light on opportunities for improvement and greater productivity and efficiency.

The interactive **Insights dashboards**

- » visualize both future, current, and historical data
- » are fully customizable
- » can be exported as reports to share with others
- » let you learn about patterns in workspace and meeting room utilization, visitors, and service orders
- » can be set up to fit your exact reporting needs
- » help you make informed decisions for your internal processes

Contact us to hear more

Insights can help you visualize the data gathered through your workspace management solution. It is offered as an optional feature for Resource Central.

There is a high focus on data security to protect your company's information.

If required, we have the expertise to assist in the building of your custom reports.

Real-life situations

Examples of how a sensor solution can be used at your workplace

OPTIMIZE REAL ESTATE COSTS

See data about the sensors in an interactive up-to-date dashboard.

The OfficePlace Sensor dashboard can help adjust your procedures and save on costs by providing data insights that help property managers make informed decisions, such as:

- How large does the office need to be?
- Do we have space that can be sub-let?
- Do we have more space than we need?

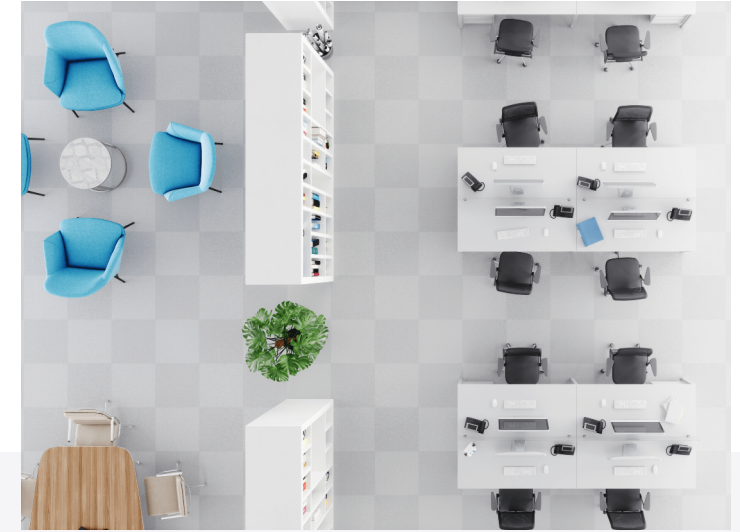

GAIN INSIGHTS WITH BUSINESS INTELLIGENCE (BI)

Optimize resources and office space.

The sensor solution provides data about no-shows, cancellations, usage time, and more. It can help you answer questions like:

- How many hours is a specific room or desk used?
- Which days or hours are resources used the most – or least?
- Which desks are booked the least and which areas are the most popular?

SEE UP-TO-DATE AVAILABILITY

See up-to-date desk occupancy and meeting room availability in your Outlook® calendar.

Overview floor plans can show you which desks are occupied and where you can find your perfect spot.

The sensor provides information to OfficePlace. When occupancy is registered, the workspace will appear occupied on floor plans and in the Outlook® calendar.

Real-life situations

Examples of how a sensor solution can be used at your workplace

SIMPLIFY CHECK-OUTS AND CANCELLATIONS

Detect when meetings end early or last longer than planned.

The workplace sensor can smartly detect a lack of occupancy or prolonged occupancy and provide information to end or extend the room booking.

The space will then appear free/occupied in Outlook® for other employees to book or not.

Customize the solution according to your needs.

MAKE INSTANT BOOKINGS

Create a booking by walking into an available meeting room & book a desk when sitting down.

If a sensor registers activity in a meeting room or at a reserved desk, the workspace booking will be confirmed in Microsoft 365 / Exchange.

The room or desk will appear as booked in Outlook®.

SUPPORT FACILITY MANAGEMENT

Resources associated with a meeting are canceled when the sensor does not detect activity, although a room is booked.

If a reserved meeting room or desk is not used anyway, there is no need to clean it. Facility Management can get an overview of the facilities that are actually used.

Save costs and time by focusing only on the desks and rooms that have been in use.
