

RUNPIPE VS. CENTER OF EXCELLENCE STARTER KIT

Both Runpipe and the CoE SK are solutions that help you get the most out of your Power Platform investment, from adoption to automatically managing and enforcing governance.

The CoE SK provides a basic approach that keeps the tenant secure by governing Power Apps and Power Automate. But the Starter Kit still lacks some important functionalities for enforcing a governance.

Runpipe is the mature solution for enforcing a governance over multiple Low-Code Platforms such as Microsoft's Power Platform.

RUNPIPE

Runpipe provides an intuitive platform that brings together security, compliance and enablement for the Power Platform all in one place.

It lets you govern the entirety of your Power Platform lifecycle management, including risk and compliance assessments, backups, documentation and approval workflows. Runpipe is set up and ready to go in just a few days.

VS.

CoE STARTER KIT

Center of Excellence is an open-source starter-kit that requires a long set up time and continuous maintenance.

The Starter Kit consists of a variety of stand-alone applications and dashboards, which makes its use more difficult and time consuming. Although the CoE costs nothing by itself, using all its components will consume paid licenses for citizen developers.

SECURITY

- Identify broken Apps & Flows
- Backup Apps and Flows

GOVERNANCE

- Rules, Policies, Approval Workflows
- Compliance Assessments
- Project Documentation

ENABLEMENT

- Templates, Use Cases, Videos, Wiki
- Training and Skill Development
- Community Building

GOVERNANCE		
Approach	PROJECT-DRIVEN-APPROACH Connected Apps, Flows & Dashboards are bundled in one project.	APP & FLOW DRIVEN APPROACH Every Power App or Flow is managed without it's context within a project.
Focus & Scope	HOLISTIC FOCUS Includes operational-, compliance-, security-, and enablement aspects.	TECHNICAL FOCUS A focus on technical, operational governance to secure the tenant.

*BPMN: Business Process Modeling Notation is a graphical representation for specifying business processes in a business process model. You can use Runpipe with or without the CoE SK. When used in conjunction, we offer you consultancy on configuration and proper usage.
