

MICROSOFT 365 CO-PILOT

GETTING THE INITIAL BUILDING BLOCKS IN PLACE TO SECURE ENHENACED PRODUCTIVITY

WHAT IS MICROSOFT CO-PILOT

Co-pilot is a digital assistant that through access to your and publicly available data can help you with everyday tasks. It is integrated into a series of Microsoft Applications where it helps your employees by utilizing the inherent nature of a digital assistant.

In order to reap real and tangible benefits from the usage of Co-pilot you need to have a solid IT and data machine room. This includes amongst others, Data Security, Data Governance and Identity and Access Management. Without proper foundation your ROI will not be positive.

APENTO CAN HELP YOU SET THE FOUNDATION FOR A SUCCESFUL COPILOT IMPLEMENTATION

- 1

Perform a Content search across your Microsoft Data Landscape. Determine necessary amendments based on the findings – data classification for example.
- 2

Evaluate and determine what department is relevant to run a Co-pilot, pilot with, and ensure solid identities are in place.
- 3

Enable Co-pilot for a **few relevant** products and only for the pilot team. Ensure they are consistantly **coached** and **trained** in the usage.
- 4

Run the Pilot program for at least 2 months to ensure adequate time for adoption and proper evaluation.

BASIC PREQUISITES

- Management **buy-in** and a **present** sponsor
- Understanding of and **insight** into your data
- Solid **data quality** and **data accessibility**
- Team **eager** and **willing** to try out newest **tech**
- Determine** the need to exclude f.x. **Personal data**
- At least a **decent IAM** and **Data Security** level
