

## Overview

Keycloak is an open-source identity and access management solution aimed at modern applications and services. It makes it easy to secure applications and services with little to no code. It allows you to add authentication to applications and secure services with minimum fuss. Keycloak offers features such as single-sign-on (SSO), identity brokering and social login, user federation, client adapters, an admin console, and an account management console.

Apexon team will provide the containerized, highly available, scalable, secured, server less and clustered solution for Keycloak with standard best practices. The solution is hosted on the Azure AKS and other cloud services. Apexon's expertise will provide you the custom integration with Apple ID and other social logins like Facebook, Google etc, sign-in with OTP or registration with OTP and other custom workflow for authentication.
