# Appfie Value Proposition

**Total piece of mind– We build but also empower customers in citizen development capabilities, which makes us a trustable party for organisations in search for a long term Power Platform partner.**

**3 times nominated in the worldwide top 6 of Microsoft Power Platform partners (January 2021, December 2020, December 2019). This is based on "the most number of apps implemented in a production environment & the apps with the highest number of monthly active users (MAU)"**

*Improve my business productivity*

## **Valuable business apps**

Leverage our experienced Agile DevOps team to increase your business productivity. We turn your biggest pains and gains into valuable Power Platform solutions.

*Accelerate my digital transformation journey*

## **Citizen Development supercharged**

Successfully embed low coding as an additional pillar within your digital transformation strategy through our low code accelerator program. Get the most out of the Power Platform and eliminate any governance concerns in no time.

*Build up my low code community*

## **Citizen developer rockstars**

Accelerate the transformation of your digital natives into citizen developers through our mentoring program. Next to building up competences we will drive the citizen developers into delivering tangible use case for your organisation.

Overview

About  
Appfie

Mentoring  
Program

# Appfie Mentoring Program

## Objectives

### Build Power Platform Champions

Build Power Platform rockstars in your organisation. No matter if you are a complete novice, you just got started, or you have a specific knowledge gap, our mentoring program will close the gap in no time. Thanks to our personal mentoring approach we never treat 2 citizen developers the same, so every member of your team will receive its personal program

### Deliver Power Platform Use Cases

Why investing in building Power Platform competences if there are no tangible outcomes for your organisation. Our mentoring program not only focusses on building knowledge around the Power Platform but also guides the citizen developer in delivering their use cases. This way not only the citizen developer is happy but as well the organisation and the end users that will use the outcome of the use case

# Appfie Mentoring Program

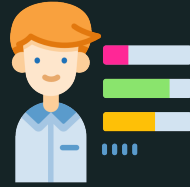

## Approach

### Goals & Use cases

Together we will crystallize your ambitions and analyse the use case(s) that you want to get delivered. Let's identify the complexity and map them onto the Power Platform.

- **Personal ambitions** – understand how the personal Power Platform ambitions can get realised
- **Use case insights** – Review of the use case you want to build on the Power Platform. Together we can define the right level of depth to get started
- **Power Platform mapping** – Identify the right solution components to bring the use case to life on the Power Platform

### Skills & gap

What is your current competence level in the different skills that are required to deliver the set use cases. Let's identify the gap and take this as the input for our mentoring plan.

- **Existing skills** – Assess your existing skill level for required solution components
- **Required skills** – Define your target skill level that is required to build the use case
- **Gap visualisation** – Visualise and describe the gap

### Plan

Based on the use case complexity, the timelines you have in mind to deliver it, and the competence gap that is available, we define the mentoring plan.

- **Your capacity** – Understand the available weekly capacity you have available for building this use case
- **Remote coaching schedule** – Define the overall coaching schedule in line with your skill gap and the available capacity

### Grow & deliver

Together we start the mentoring activities and work towards the accomplishment of your goals.

- **See next slide**

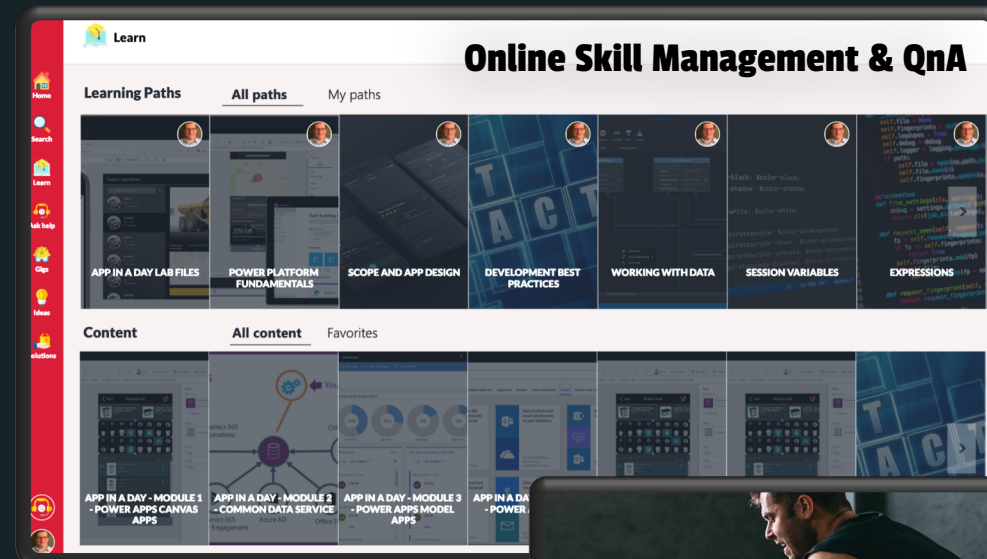

# Appfie Mentoring Program

Grow & deliver

Together we start the mentoring activities and work towards the accomplishment of your goals.

- **Mentor** – Have a frequent follow up with your mentor on the evolution of your competence & use case development journey
- **Technical Coaches** - Use our technical coaches to ask any of your use case & Power Platform questions through Livia QnA conversations
- **Remote** - Remote sessions to coach & guide you as agreed in the planning (Feasibility checks, issue resolution, personal coaching on a specific topic, ...)
- **Embedded** – Our solution is branded towards your organisations' branding schema and can be easily embedded in your MS Teams environment. This way it looks like it's one of your own apps.
- **Knowledge library** – Browse through our knowledge library and continue learning new Power Platform stuff, or leverage our personal experience throughout the projects we have performed during the last 4 years
- **Insights** – CoE leads will have access to the monitoring dashboard which allows them to understand the learning curve of the citizen developer and all the questions that were raised

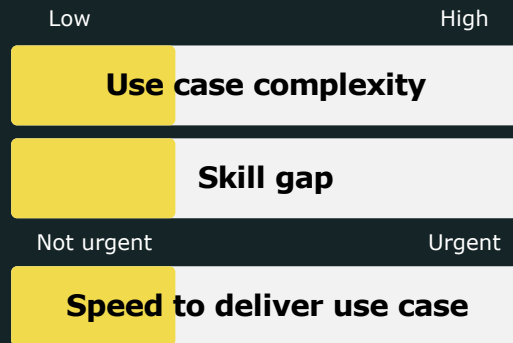

# Appfie Mentoring Program

Capacity

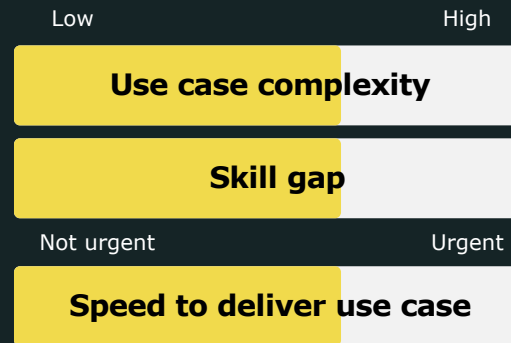

## 1-2 days per month

### Guideline - Use case complexity

- Low: Simple canvas app, low data complexity, simple Power Automate workflow, ...
- Medium: Complex expressions, higher data complexity, server side logic, ...
- High: Model driven app, integration needs, advanced expressions, co-build needed,...

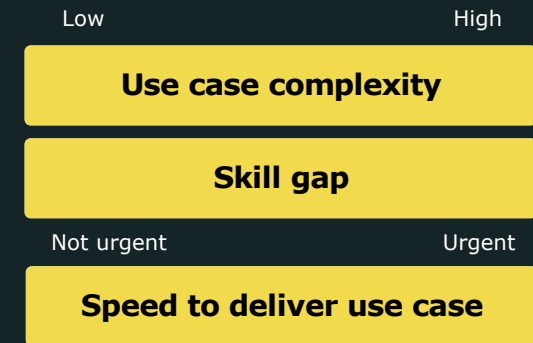

## 2-3 days per month

### Guideline - Skill gap

- Low: No knowledge
- Medium: Built a canvas app or Power Automate Flow before, ad hoc execution...
- High: Built several low/medium complexity apps and flows but specific gaps are existing, co-build needed,...

## 3+ days per month

### Guideline - Speed to deliver use case

- Low: No real timeline defined, can take several months without pressure
- Medium: Reasonable timelines with limited pressure defined to deliver the use case
- High: Critical timeline, delivery of the use case will be very challenging , co-build needed...
