AIS' Azure Government Migration Assessment

Create a cloud migration roadmap that meets your mission needs

ais APPLIED INFORMATION SCIENCES

Engagement Approach

AIS' Azure Government Migration Assessment helps you assess the dependencies and cloud readiness of on-prem applications and workloads to inform your migration roadmap.

PHASE ONE
Workload Discovery

Client work sessions to define strategy and conduct an initial inventory of workloads and applications to create a prioritized migration and modernization backlog. We work with the key system owners and SMEs for each workload or application to assess each application.

PHASE TWO
Mapping

Analysis of the systems and source code of custom applications to determine system interdependencies, cloud readiness, application scope, and approach for migration or modernization of your applications to be moved to the cloud, implemented using an agile approach.

PHASE THREE
Present Findings

Analyze data, documentation, systems and code to compile findings and recommendations and plan for progressing with cloud migration and modernization efforts.

Big Picture Approach

Step One:
Prioritize Workloads

Initial workloads will be prioritized for analysis and rationalization based on business goals, complexities, and dependencies. This may be done through a guided workshop with AIS.*

Current Offer
Assess App Portfolio

Through tooling and workshops, we'll analyze COTS applications and source code for custom apps to determine the right migration or modernization approach.

Step Three:
Cloud Platform Readiness

Prior to migrating the first workload, we'll help you select and establish a cloud platform, along with support in meeting requirements for Authority to Operate (ATO) in the cloud.
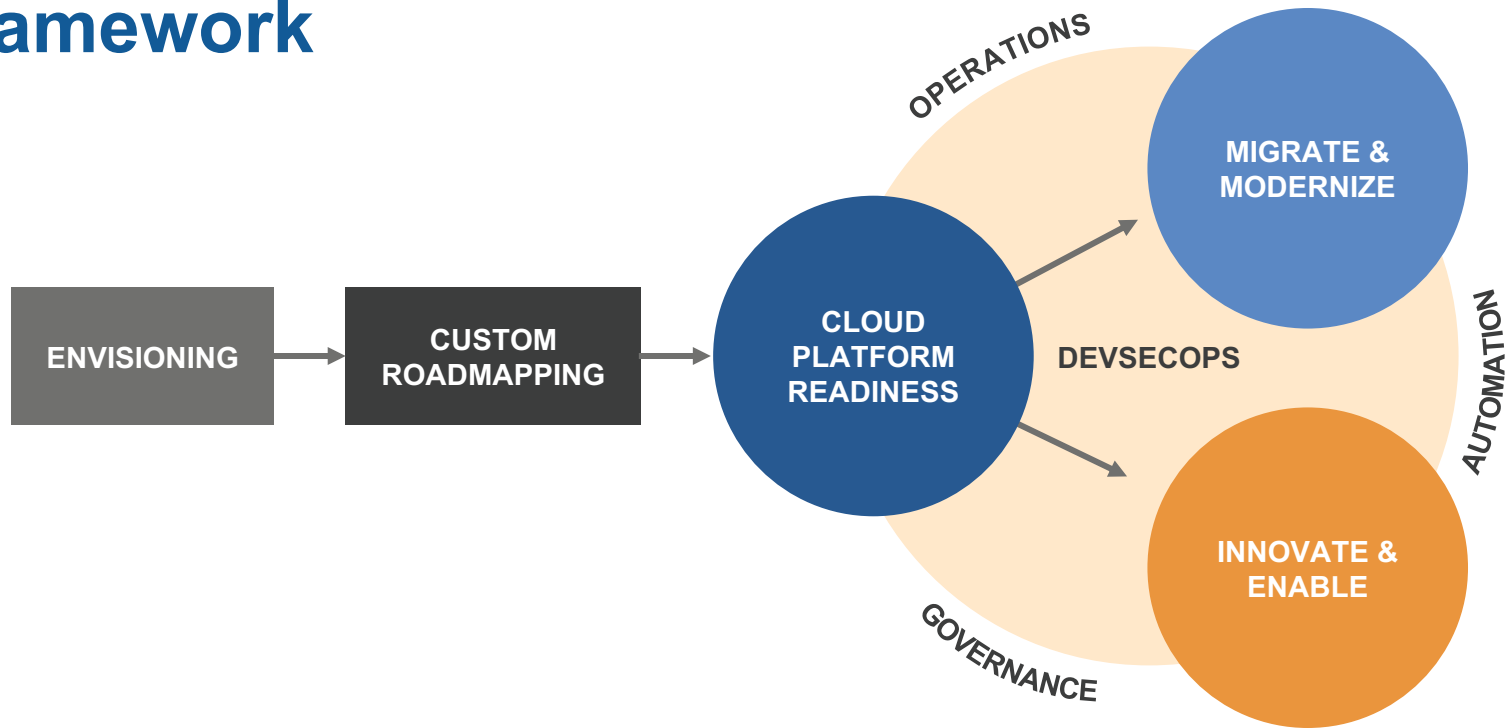

Step Four:
Lead Horse Migration

We'll migrate a proof of concept application to the designating cloud environment using the recommended approach, followed by a phased migration plan.
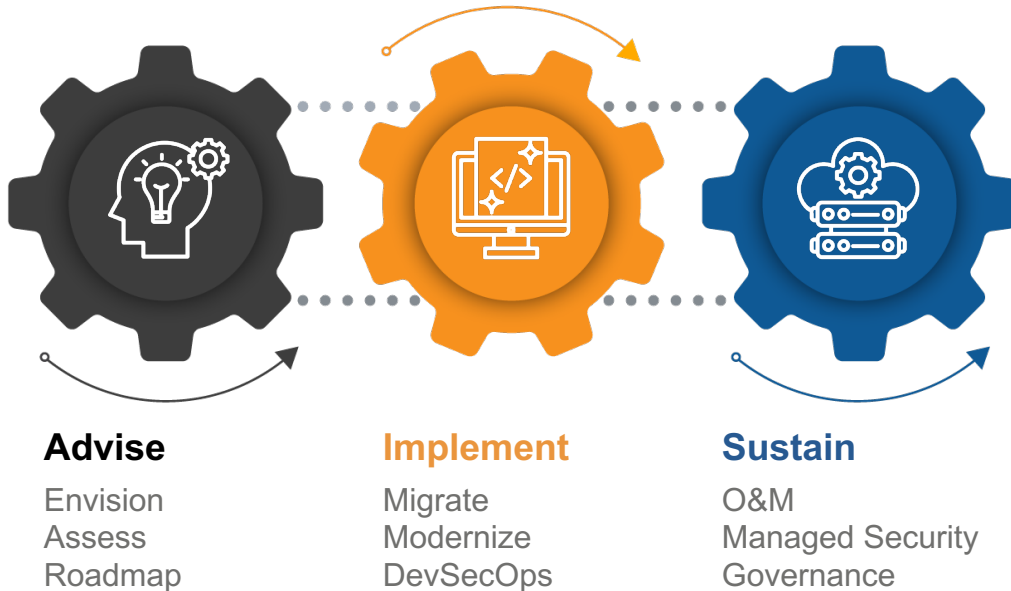

*Estimated pricing for the Application Portfolio Analysis and migration roadmap creation assumes that initial prioritization is completed, either by the client or through a separate engagement with AIS. Once the Application Portfolio Analysis is completed, prioritization may be revisited based on assessment findings.
** Cloud Platform options may include, but not limited to, Azure Commercial Cloud, Azure Government Cloud, Microsoft Office365 Commercial, Microsoft Office365 GCC High, and Power Platform. AIS supports all these environments for migration, modernization, and managed services. We are also a Cloud Solution Provider, one of ~10 partners that can host on GCC High.

Why AIS?

✓ Over 10 years of cloud experience and expertise

✓ Deep experience working within highly regulated, enterprise IT environments

✓ IP and processes for agility, scale, and change management

✓ Trusted advisors who value long-tenured relationships

✓ Company values rooted in education and knowledge share

✓ Invest in innovation to explore emerging solutions
