Azure Government Migration POC

Fast track cloud transformation with a rehost migration

AIS delivers a Rehost Migration Proof of Concept (POC) as a fast path to the cloud, often followed by a phased migrate and modernize strategy for the rest of your application portfolio.

An Application Migration using a Rehost approach will provide your organization with a base Landing Zone and Proof of Concept (POC) migration to help you begin a phased migrate and modernize strategy. Rehosting allows organization to spend minimal time and money moving legacy apps in a datacenter to the cloud and still realize significant results. Following this engagement, we'll help you begin a phased modernization strategy, including prioritizing application batches for migration using agile methodology.

Our approach to app migration enables teams to reduce cycle times, leverage proven processes, and scale up talent to deliver better migration outcomes. Our cloud transformation methodology stands on the foundation of our Cloud Delivery Framework (CDF), a repository that provides guidance and backlog documentation for base migration tasks and best practices. Together, our IP and experience helps enterprises realize the cloud outcomes that drive business value and faster time to market.

Our Approach to Application Migration

PHASE ONE **Plan & Assess**	PHASE TWO **Build & Migrate**	PHASE THREE **Validate & Test**
The assessment and planning phase includes an initial review of your organization's portfolio to identify a non-mission critical, low risk initial pilot application application for the rehost migration to Azure Government.	Architecture definition and implementation of an Azure Government Landing Zone cloud infrastructure for hosting and operating the candidate POC application.	Conduct validation of the migrated POC application to the Azure Government Landing Zone infrastructure and perform user acceptance testing and certification of business capabilities.

Why AIS?

AIS' experience with Authority to Operate (ATO), Cloud Access Point (CAP), and Cloud Infrastructure build in large, highly regulated environments paired with unapparelled application modernization capabilities will put your organization on the right path to cloud transformation. As a certified Gold Microsoft Partner, we have deep expertise in helping enterprise organizations achieve cloud transformation on Azure. We began working with Microsoft Azure in 2008 and have been working closely with the Microsoft product teams ever since. AIS has pioneered many Azure firsts, from DevSecOps and Azure Blueprints to building our own Service Catalog and Delivery Framework for better automation, speed, and quality of delivery. Our innovative approaches and technical depth have earned us the privilege of experience in designing, implementing, and modernizing some of the most complex and highly regulated cloud environments. Take your next step into the cloud with confidence and reach out to AIS today.
