

Java Modernization on Azure: Proof of Concept

Migrate your Java workloads to Microsoft Azure

Java Application Modernization: Proof of Concept

6 Weeks

\$110,950

Push through the blockers of Java application modernization

Understand how can migrate your large, inflexible Java applications to Azure to take advantage of cloud-native services and adopt agile methodologies.

Assess

Technical review of your current Java applications to identify modernization pitfalls and drawbacks.

Design and Plan

Design of a reference application architecture on Azure and identification of candidate application for PoC.

Proof of Concept Build

Customized proof of concept environment for a defined application using Azure services.

Final Deliverables

1

Assessment report of current application infrastructure.

2

Fully operational PoC environment for a defined application.

3

PoC code and all artifacts for future reference.
