

# App Packaging

“Maintaining your Windows 10 migration and updates activity”

## Using an intelligent combination of offsite and remote access packaging to keep you ahead

- Covers all applications - 3rd party vendors and inhouse developed
- Includes complex applications with network or license server requirements
- Option to include loading to SCCM and Intune for test / pilot activity
- Online portal for governance of service - dashboards and SLA monitored
- Option to operate service using your own group policy applied builds offsite
- Option to schedule remote interviews with stakeholders and users as part of the service

### No onsite onboarding required

While we all face challenges with onsite onboarding, allocation of physical kit etc we can engage without onsite visits.

### No contract commitment and fixed price

Use our service for 2 applications or 200, with no contract commitment tie-in and a fixed price per package - you can control your budget.

### SLA Tracking

Live dashboard reports and detailed application activity reporting, taking away your governance overheads. Account Director led scheduled reporting and updates, delivered at the frequency you and your sponsors need.

### Same high-quality of service

We follow the same high-quality processes that we would agree and follow onsite, guaranteeing no difference in results.

### Mobilise in 24 hours

Agree remote access protocols, update packaging standards and processes, dedicate FTP area, configure online portal and ready for your first packages within 24 hours.

### Maintain your project or BAU throughput

Self isolation, WFH, and travel restrictions need not impact on your Windows 10 readiness or your ability to keep your applications updated.

## Why your Organisation needs APPtechnology App Packaging

- Onboarding Incentive - First two packages for free against your first PO
- All packaging formats available - MSI, MSIX, App-V, Win32, multiple containerisation technologies
- Designed for users of SCCM, Intune and Autopilot (MEM) and other virtualisation solutions
- Dedication of resources to the offsite activity you require
- Use the latest packaging standards to ensure longevity of the packaging you pay for
- We supply experienced migration project resourcing to assist your OS and Applications delivery

We also supply Solutions for Legacy application management, Intune, Autopilot and Microsoft Endpoint Management technologies. Please contact Declan Smith via t: +44 7976 767655 | e: sales@apptechology.co.uk
