

## Unlock the full potential of your data estate with our guided assessment

As organisations look to modernise their data platforms and adopt AI, many struggle with fragmented legacy systems, unclear priorities and competing demands across cost, security and performance. Without a clear understanding of their current data estate, teams often lack confidence in where to invest, how to modernise safely, or how to turn data strategy into meaningful outcomes.

Arinco's Data Assessment helps organisations establish the right foundations to modernise your data estate and prepare for an AI-first future. Over 2-6 weeks, we assess your current environment, identify gaps and opportunities, and design a clear roadmap for modernisation. Through collaborative workshops and practical analysis, we evaluate cost, security, scalability and performance, ensuring you can shift to a modern data platform with confidence. With a well-aligned strategy in place, your teams can accelerate analytics, AI and intelligent applications.

## Why organisations use Arinco's Data Assessment

Give your organisation clarity on how to modernise your data estate.

Identify and prioritise the highest value data and AI opportunities.

Ensure security, governance and scalability through a trusted modern architecture.

Gain a clear, actionable roadmap that turns strategy into real outcomes.

## Our process

### Assess

Understand the current data landscape, maturity and priorities through targeted workshops and technical review.

### Analyse

Identify gaps, risks and opportunities across scalability, performance, compliance and AI readiness.

### Design

Define a cloud-first target data architecture and solution approach aligned to business, security and governance needs.

### Roadmap

Develop a prioritised data modernisation roadmap with clear pathways, indicative costings and next steps.

## Customer success story

Confronted by a complex legacy data estate and growing organisational demand, a public, Melbourne-based hospital partnered with Arinco to shape a comprehensive data modernisation roadmap. Centred on the deployment of a cloud-first data platform, the strategy delivers a balance between technology uplift, workforce enablement and actionable analytics. Empowering teams to make faster, data-driven decisions that enhance patient care and operational efficiency.

## Deliverables

A current-state assessment of data platforms, architecture and operating models.

Findings across security, governance, risk and cost optimisation.

Identified data, analytics and AI opportunities aligned to business priorities.

A target-state modern data platform architecture.

A prioritised modernisation roadmap with clear next steps.
