Establishing trust, control and confidence in enterprise data

As organisations invest more heavily in analytics, AI and digital products, data governance has become critical, however yet many struggle to move beyond policy documents and fragmented tooling. Data is often poorly understood, inconsistently classified and difficult to trust, creating friction for reporting, analytics and AI initiatives while increasing compliance and security risk.

Arinco's Data Governance Accelerator helps organisations establish a trusted, well-managed data environment by putting the right governance frameworks, processes and technology in place from day one. Working closely with your team, we assess your current data estate, deploy Microsoft Purview using proven DevOps patterns, and uplift data stewardship capability across the business. The result is a scalable governance foundation that improves visibility, strengthens compliance and makes it easier for people to confidently use data.

Why organisations use Arinco's Data Governance Accelerator

A clear, actionable data governance strategy aligned to your business priorities, including a practical approach to adopt.	A modern, scalable Azure data governance platform built using repeatable patterns and strong governance.	Quicker access to trusted data through automated metadata capture and a searchable data catalogue.	Lower compliance and security risk with classification, sensitivity labels and enforceable policies.	A governance-first base enabling safe adoption of analytics, AI and intelligent applications.

Our process

Assess	Design	Implement	Enable
Understand the current data landscape, governance maturity, regulatory requirements and business priorities.	Define a clear, actionable data governance strategy aligned to organisational goals and ways of working.	Deploy Microsoft Purview using repeatable Azure-native and DevOps patterns, including classification, cataloguing and policy controls.	Establish stewardship roles, operating processes and practical guidance to embed governance into day-to-day data use.

Customer success story

An Australian retail bank partnered with Arinco to modernise its data environment and enable a Purview Governed, lakehouse platform. Microsoft Purview Data Governance provided them with the ability to provide a tenant wide view of their data estate while reusing data lineage, data asset information captured in Unity Catalog. Delivered using infrastructure-as-code and aligned to financial data standards, Arinco helped the bank accelerate the enablement of their data governance functions and create a strong foundation for future growth.

Deliverables

- A clear, actionable data governance strategy and adoption roadmap.
- A modern, scalable Azure data governance platform built on Microsoft Purview.
- Data classification, sensitivity labelling and policy enforcement.
- Governance processes, stewardship models and operating guidance.
- Documentation, knowledge transfer and enablement support.
