

## Review your Microsoft 365 and Azure security posture and identify actionable recommendations

Organisations need to strengthen cyber security and reduce risk as cloud environments grow more complex. Without clear visibility of security gaps, overlapping tools and inconsistent controls, it can be difficult to build a scalable approach to security uplift and compliance.

Arinco's Security Assessment helps organisations identify security gaps, improve cyber security maturity and reduce operational complexity across Microsoft 365, Azure and hybrid environments. We provide a holistic review of your current environment, detailed gap analysis aligned to leading frameworks such as ASD Essential 8, ISO27001, NIST CSF and Microsoft Zero Trust, and an actionable roadmap for uplift. The result is a clear, prioritised plan to strengthen defences, consolidate controls and support sustainable, scalable security improvement.

## Why organisations use Arinco's Security Assessment

Identify security gaps and provide a targeted roadmap to uplift your Microsoft 365 and Azure security posture.

Consolidate overlapping tools and processes to reduce technical debt and ongoing operational effort.

Analyse security spend and utilisation to uncover cost-saving opportunities.

Map environment controls to leading frameworks such as ASD Essential 8, ISO27001 or NIST CSF.

Deliver a prioritised set of initiatives to drive a structured, organisation-wide security uplift.

## Our process

### Assess

Assess your current security environment through workshops and discovery, identifying key risks, gaps and priority focus areas across Microsoft 365, Azure and hybrid platforms.

### Analyse & roadmap

Deliver detailed gap analysis and recommendations mapped to leading security frameworks, structured into a prioritised roadmap of initiatives that reduce risk and uplift maturity.

### Report & walkthrough

Provide a comprehensive security assessment report and presentation, aligning stakeholders on findings, actionable next steps and a clear path toward sustainable security improvement.

## Customer success story

Arinco partnered with a NSW state government corporation to deliver a comprehensive Microsoft 365 and Azure security assessment aligned to ASD Essential 8 and NIST CSF, providing a clear roadmap for segmentation, conditional access, Defender for Cloud and operational excellence. As a result, Arinco produced a practical, actionable plan for security uplift and compliance alignment.

## Deliverables

Security gap analysis aligned to ASD Essential 8, ISO27001, NIST CSF or Zero Trust principles.

Prioritised roadmap of initiatives to strengthen controls and reduce risk.

Actionable recommendations to remediate misconfigurations and improve governance.
