

Streamline workforce identity with Microsoft Entra ID

Organisations increasingly need strong identity governance to support secure access, operational efficiency and compliance across modern workplaces. Without automated onboarding and offboarding processes, identity lifecycle management can become manual, inconsistent and costly, increasing risk as environments scale and organisations prepare for AI-enabled tools like Copilot.

Arinco's Entra ID Accelerator helps organisations uplift identity lifecycle management and governance using Microsoft Entra ID. We deliver a comprehensive assessment, solution design and phased rollout of automated Joiner, Mover, Leaver (JML) workflows, integrating HR systems and downstream applications to streamline onboarding, role changes and offboarding. The result is secure, compliant and efficient identity management that reduces overhead, strengthens governance and enables future-ready identity automation.

Why organisations use Arinco's Entra ID Accelerator

Streamline onboarding, role changes, and offboarding with automated JML workflows.

Implement robust identity governance, role-based access, and audit logging for compliance.

Integrate HR systems as the source of truth for identity provisioning and updates.

Reduce manual effort, errors, and delays in user management across the organisation.

Establish a future-ready platform for identity, supporting identity automations and integrations.

Our process

Assess

Review current identity lifecycle processes, governance maturity and key system integrations, identifying opportunities for automation, risk reduction and alignment with Zero Trust principles.

Design & deploy

Design and configure Microsoft Entra ID governance capabilities, implement automated JML workflows, and integrate HR and downstream applications for streamlined identity operations.

Operate

Enable access reviews, monitoring and identity telemetry. Provide knowledge transfer, operational guidance and phased rollout support for sustainable identity management and continuous improvement.

Customer success story

Arinco unified a leading Australian energy organisation's digital workplace following multiple acquisitions by integrating over 13,000 users into a modern, secure Azure environment. Through automated identity lifecycle management and Azure Virtual Desktop, Arinco reduced operational overhead by 80%, delivered \$1.2M in savings and enabled seamless store transitions with a platform ready for future Copilot adoption.

Deliverables

Assessment report and recommendations for identity lifecycle governance uplift.

Automated Joiner, Mover, Leaver workflows.

Role-based access design, compliance controls and audit logging configuration.

Operational documentation, handover and roadmap.
