

## Modernising Microsoft 365 to enable a secure, productive digital workplace

Many organisations are operating on legacy or partially adopted Microsoft 365 environments that limit collaboration, mobility and security. Without a structured approach to enablement and optimisation, M365 investments are limited with inconsistent user experiences and fractured ways of working.

Arinco's M365 Modernisation Accelerator helps organisations migrate to, optimise and modernise their Microsoft 365 investments. Through expert-led discovery, design, deployment and change management, we enable organisations to unlock the full value of Microsoft 365 services, including Exchange, OneDrive, Teams and SharePoint.

## Why organisations use Arinco's M365 Modernisation Accelerator

Secure by design by aligning tenant and platform configurations to industry security standards.

Enhance user experience with consistent, intuitive collaboration and self-service tools.

Migrate and optimise with confidence using structured, phased approaches that minimise downtime and disruption.

Prepare for the future with a scalable Microsoft 365 foundation that supports ongoing digital transformation.

## Our process

### Discover

Assess current M365 maturity, tenant configuration, workloads and user needs.

### Design

Define the target M365 architecture, security posture, migration approach, optimisation and adoption plan.

### Migrate

Execute phased migration and optimisation of M365 services such as Exchange, OneDrive, Teams and SharePoint.

### Adopt

Deliver change management, communications and enablement to support user adoption and productivity.

### Refine

Fine-tune configurations, performance and governance to support ongoing improvement and scale.

## Customer success story

Arinco partnered with a healthcare organisation to deliver a full-scale M365 modernisation, including tenant optimisation, Exchange and OneDrive migration, and the rollout of modern device management with Windows 11 and Intune. The engagement included a detailed current state assessment, remediation of technical debt, and phased deployment to Microsoft 365 for hundreds of devices and users. The result was a secure, scalable, and future-ready digital workplace; improving collaboration, mobility and compliance across the organisation.

## Deliverables

- M365 target architecture and security design.
- Phased migration and optimisation plan for key M365 workloads.
- Configured tenant and platform security and compliance controls.
- Adoption and change enablement approach for end users.
- Operational documentation and knowledge transfer.
