

## Navigate mergers, acquisitions and divestments with a clear technology roadmap and reduced risk

Arinco's Merger & Acquisition Assessment helps organisations move forward with clarity and confidence. Over six weeks, we deliver a tailored strategy and roadmap to consolidate technology environments, reduce complexity and safeguard assets. The result is a defined path forward, supported by actionable recommendations and prioritised workstreams for a smooth transition.

Mergers and acquisitions introduce significant complexity across identity, security, collaboration and infrastructure environments. Without a clear strategy, organisations risk fragmented systems, poor user experience, duplicated platforms and unmanaged security gaps during transition.

## Why organisations use Arinco's Merger & Acquisition Assessment

Establish a clear strategy and roadmap to guide mergers, acquisitions or divestments.

Identify security gaps, operational risks and integration challenges early in the transition.

Reduce complexity by consolidating identity, collaboration and technology environments.

Align technology and operations with long-term business strategy and future growth.

## Our process

### Assess

Analyse current environments, risks and business priorities.

### Define

Consolidate findings into a tailored roadmap, options and recommended direction.

### Refine

Deliver a strategy aligned to a preferred option with clear next steps for execution.

## Customer success story

Arinco unified a leading Australian energy company's digital workplace following multiple acquisitions, integrating over 13,000 users into a modern, secure Azure environment. Through automated identity lifecycle management and Azure Virtual Desktop, Arinco reduced operational overhead by 80%, delivered \$1.2M in savings and enabled seamless transitions ready for future Copilot adoption.

## Deliverables

M&A technology assessment report outlining risks, gaps and integration priorities.

Consolidation roadmap across identity, security, collaboration and infrastructure.

Future-state recommendations aligned to business objectives and operational stability.

Prioritised workstreams to support seamless transition planning and execution.
