

Modern Azure Application Landing Zone

Arkahna's Secure Azure Landing Zone lays the foundation for your modern cloud-native application so you can focus on innovation. Our Cloud Adoption Framework-inspired landing zone establishes best-practice WebApp Infrastructure for you to build upon.

MOVE FASTER – WITHOUT BREAKING A THING

SECURE BY DESIGN

Protect your business-critical applications by leveraging a secure foundation across physical, infrastructure, and operational security. Security isn't something you apply at the end of a project.

OPTIMISED SCALE

Only pay for what you need, with the option to rapidly scale to meet demand. Use contemporary architecture and patterns to ensure your applications can scale when you need them to but are optimised when you don't.

CAF-ALIGNED

Inspired by Microsoft's Cloud Adoption Framework to align to best-practice architecture but tailored to remove complexity and provide ultimate flexibility to tailor to your needs.

EFFICIENT DEPLOYMENT

Avoid the pitfalls of out-of-sync environments and time-consuming deployments via infrastructure-as-code and continuous integration and deployment.

WHAT MAKES ARKAHNA SO DIFFERENT?

AGILE AND OUTCOMES FOCUSED

We align to your outcomes and provide a fixed price to achieve them. That does not mean you are locked into a traditional fixed price scope battle – we deliver agile, so you still retain the flexibility to re-prioritise scope if you need to.

SECURE BY DESIGN

Security shouldn't have to inhibit innovation. But cutting-edge technology won't support your business if it's easily compromised.

We believe in understanding a business inside and out to ensure we can deliver enterprise-quality, cloud-native applications that are secure and uncompromising. Through the implementation of DevSecOps and industry leading security principles, we help you embed secure thinking into all aspects of your business.

ADOPTION ISN'T OPTIONAL

Your project adoption isn't optional, so neither should change management practises. We build in change management principles into every workshop to capture and product and deliver what your organisation needs from the get-go, maximising your opportunities for success.

ELEVATE YOUR BUSINESS

It's not the technology that makes an organisation, it's the people. Enhancing the knowledge of your staff will empower your organisation to be self-sufficient and achieve higher goals. That is why we offer training not only in the solutions that we build and implement for you — but also real-world lessons based on our extensive experience.
