

About Us

Armadillo Analytics (ARM) is a hidden-tech company that provides analytics and technology services to clients interested in the data generated by their built environment assets.

We are a team of civil engineers, electrical engineers, data engineers and data scientists who pride ourselves on providing clear and concise insights from real-world data to solve real-world problems.

The ARM Hub

At the heart of our solution is the ARM Hub – an industry integrator that connects data sources and smart equipment to the utility suppliers, billing bureaus, companies and consultants that need to use them.

Like the Data Communication Company, which connects smart meters to suppliers in the gas and electricity industry, the ARM Hub is a connector to the district energy industry’s smart meters, building management systems, connected controllers and more.

ARM – Analyse. React. Measure.

Data-driven insights are only as valuable as the actions they inspire. Our approach is to encourage action through clear methodology where we:

- Power the sharing of data through our integrated Hub
- Analyse and draw insights from that data with our cloud-based Data Analytics Engine
- Enable manual and automated systems to React to those insights through API integrations
- Measure the impact of those reactions, providing clear ROI metrics

Modules

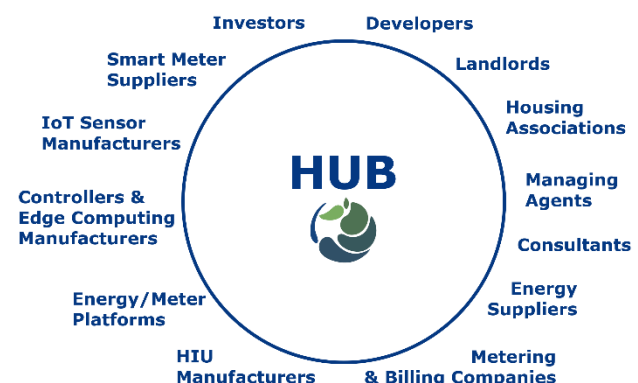

All our modules are fully white-labelable, allowing us to be the hidden tech that enables our clients to deliver industry-leading services to their own customers.

Our modules have a range of applications including:

- Metering & billing of any utility
- Mould prediction and risk management of property portfolios
- Machine learning & advanced analytics of heat and cooling meter data
- Remote monitoring of building management systems and built environment assets
- Dashboards for business and project insights
- Big data analytics for data-driven insights
- Industry-wide connectivity through our Hub Adapter, which enables users to leverage the hub for communicating with the connected assets and platforms

Community

Armadillo is building an ecosystem around our Hub of like-minded companies and clients who recognise the value of data. We believe that data, in the right hands, enables decision making that builds a more effective industry with better-performing built environment assets.

If you are interested in joining the ecosystem, or would like to hear more about one of our modules, reach out to us at contact@armadillo-analytics.com.
