CLOUD INTRANET SOLUTIONS WITH OFFICE 365

Why use an intranet?

Today, both customers and employees have much higher expectations of business than ever before. Employees expect to be able to work effectively from anywhere, and on any device. They demand faultless internet connectivity and security, as well as the ability to collaborate with their colleagues and clients via a number of channels.

At the same time when things are changing technically, intranet concepts are also evolving. Modern intranets are like internal social networks including a lot of discussions and communities. Change in the amount of user generated content is huge compared to the old days when intranet was mainly for publishing internal news and instructions.

Also new, more efficient ways to communicate, especially videos are coming at full force to the intranets.

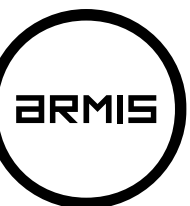

When in the past intranets were mainly used at work, within working hours and with the corporate PC, modern intranets are used anywhere, anytime and with any device.

Microsoft's Office 365 is the world's leading cloud productivity platform.

Although the intranet is a key service for the workers, it is really essential to understand that Office 365 doesn't include a ready-to-go intranet solution.

Therefore, some usability improvements, branding according to company brand guidelines, as well as responsive design to support mobile and tablet users must be built when building an intranet that end-users are really willing to use.

If using the company intranet is a delightful experience, your workers will be more engaged and satisfied.

PLANNING & DEPLOYING A SUCCESSFUL INTRANET

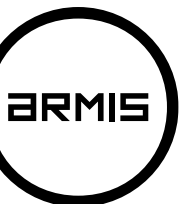

Over the past few decades intranets have evolved from a way to put together a few documents to an essential business tool.

An intranet allows people to communicate, collaborate, search and share information via a web browser.

Intranets are far more than just a communication tool.

Identifying the objectives of your intranet is your first key task. It will allow you to create a business case. It is important that when planning your intranet you aim to develop a user centric intranet that not only provides employees with an indispensable tool to share information, manage knowledge and disseminate news but also equips them with access to business applications and management tools to further increase efficiency.

A useful intranet requires an appealing, easy to use interface, the ability to easily access integrated external applications with appropriate security features, documentation that provides help for people and features that can be easily maintained and upgraded.

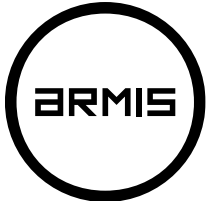

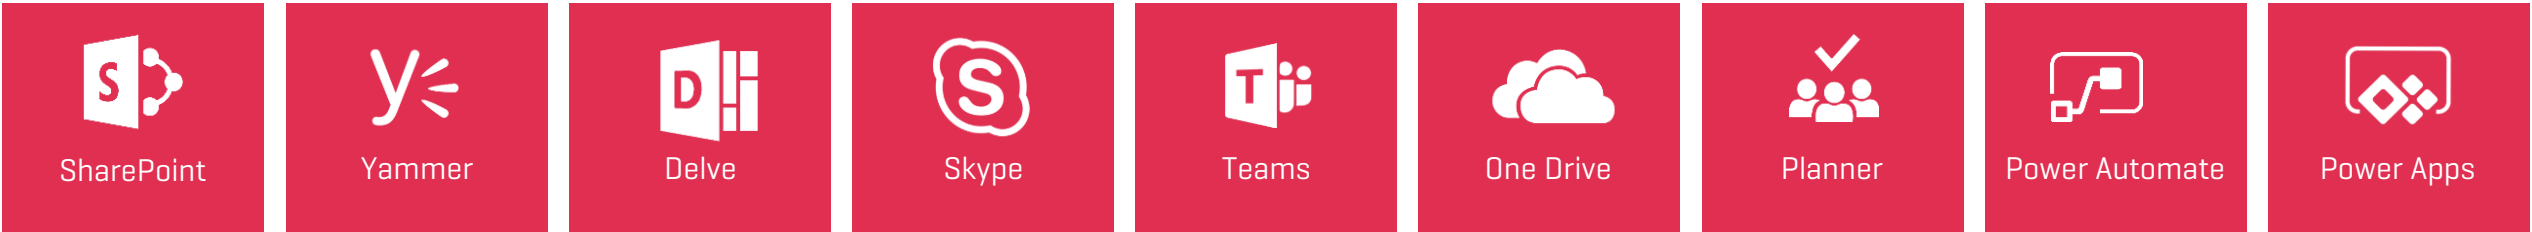

CLOUD INTRANET SOLUTIONS WITH OFFICE 365

Customer benefits

Using Office 365 as an intranet platform give your organization access to leading enterprise tools, making technology more accessible.

COST

No up-front investment in technology. The first reduction in cost in an intranet scenario is that there is no need to manage and maintain the infrastructure of the solution

FUTURE-PROOF

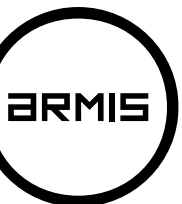

The classic challenge with on-premises solutions is the inevitable need to upgrade to the newest version once the system you are using becomes too outdated to use. This is the problem that Office 365 aims to solve

SCALABILITY

One of the great things about an Office 365 intranet solution, is that you only pay for what you need, when you need it

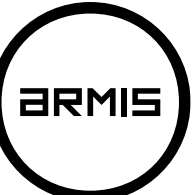

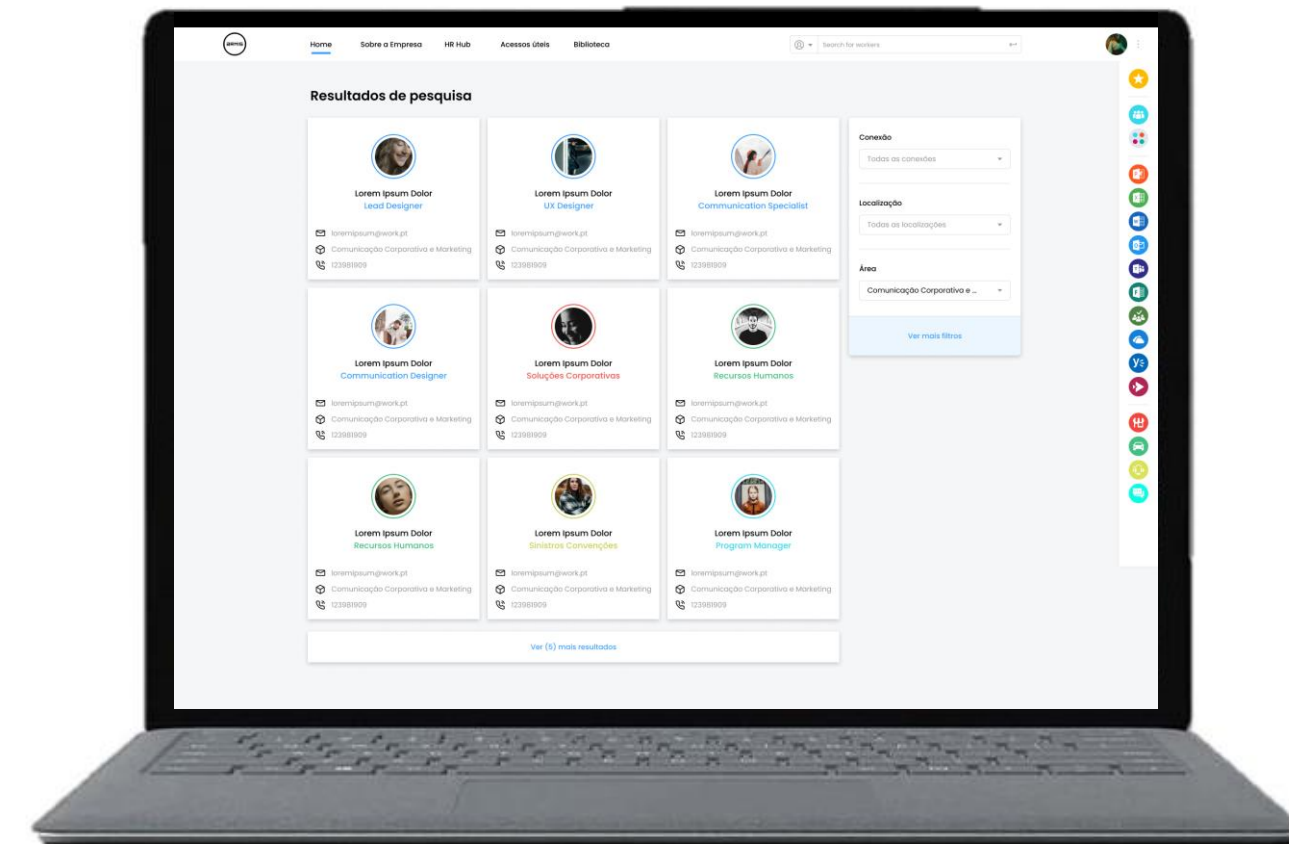

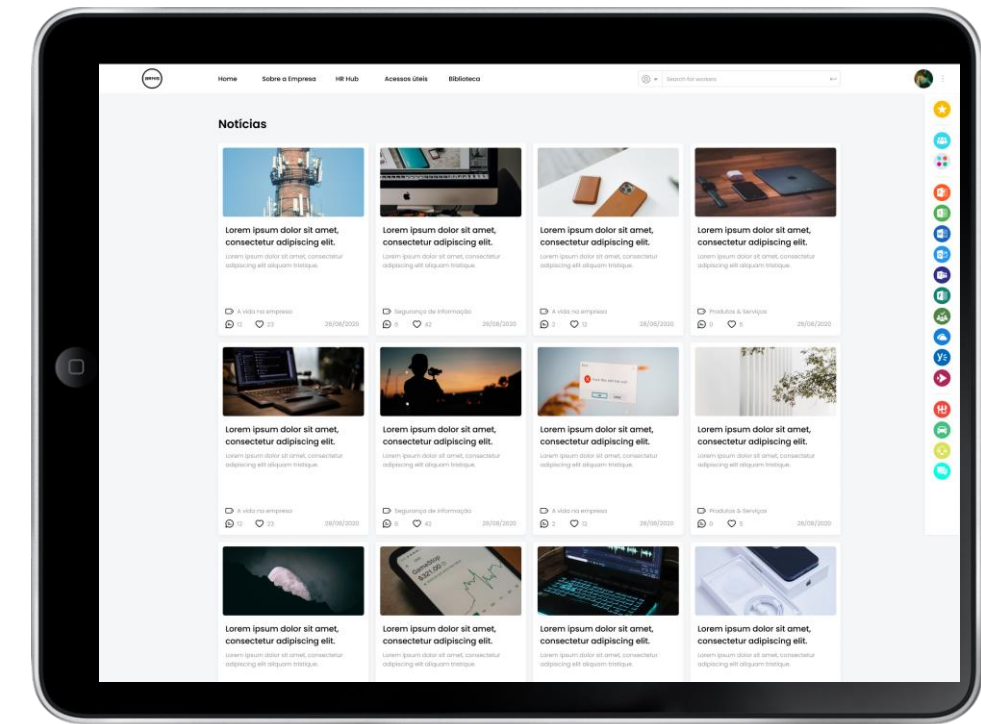

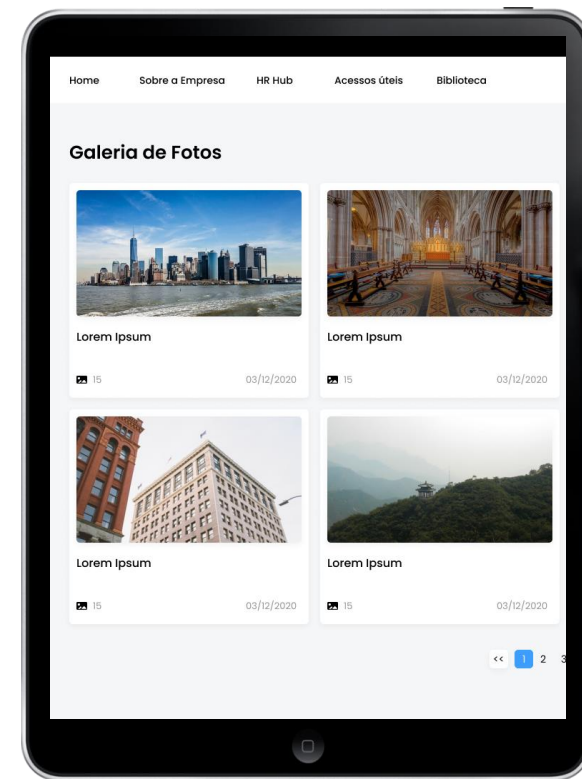

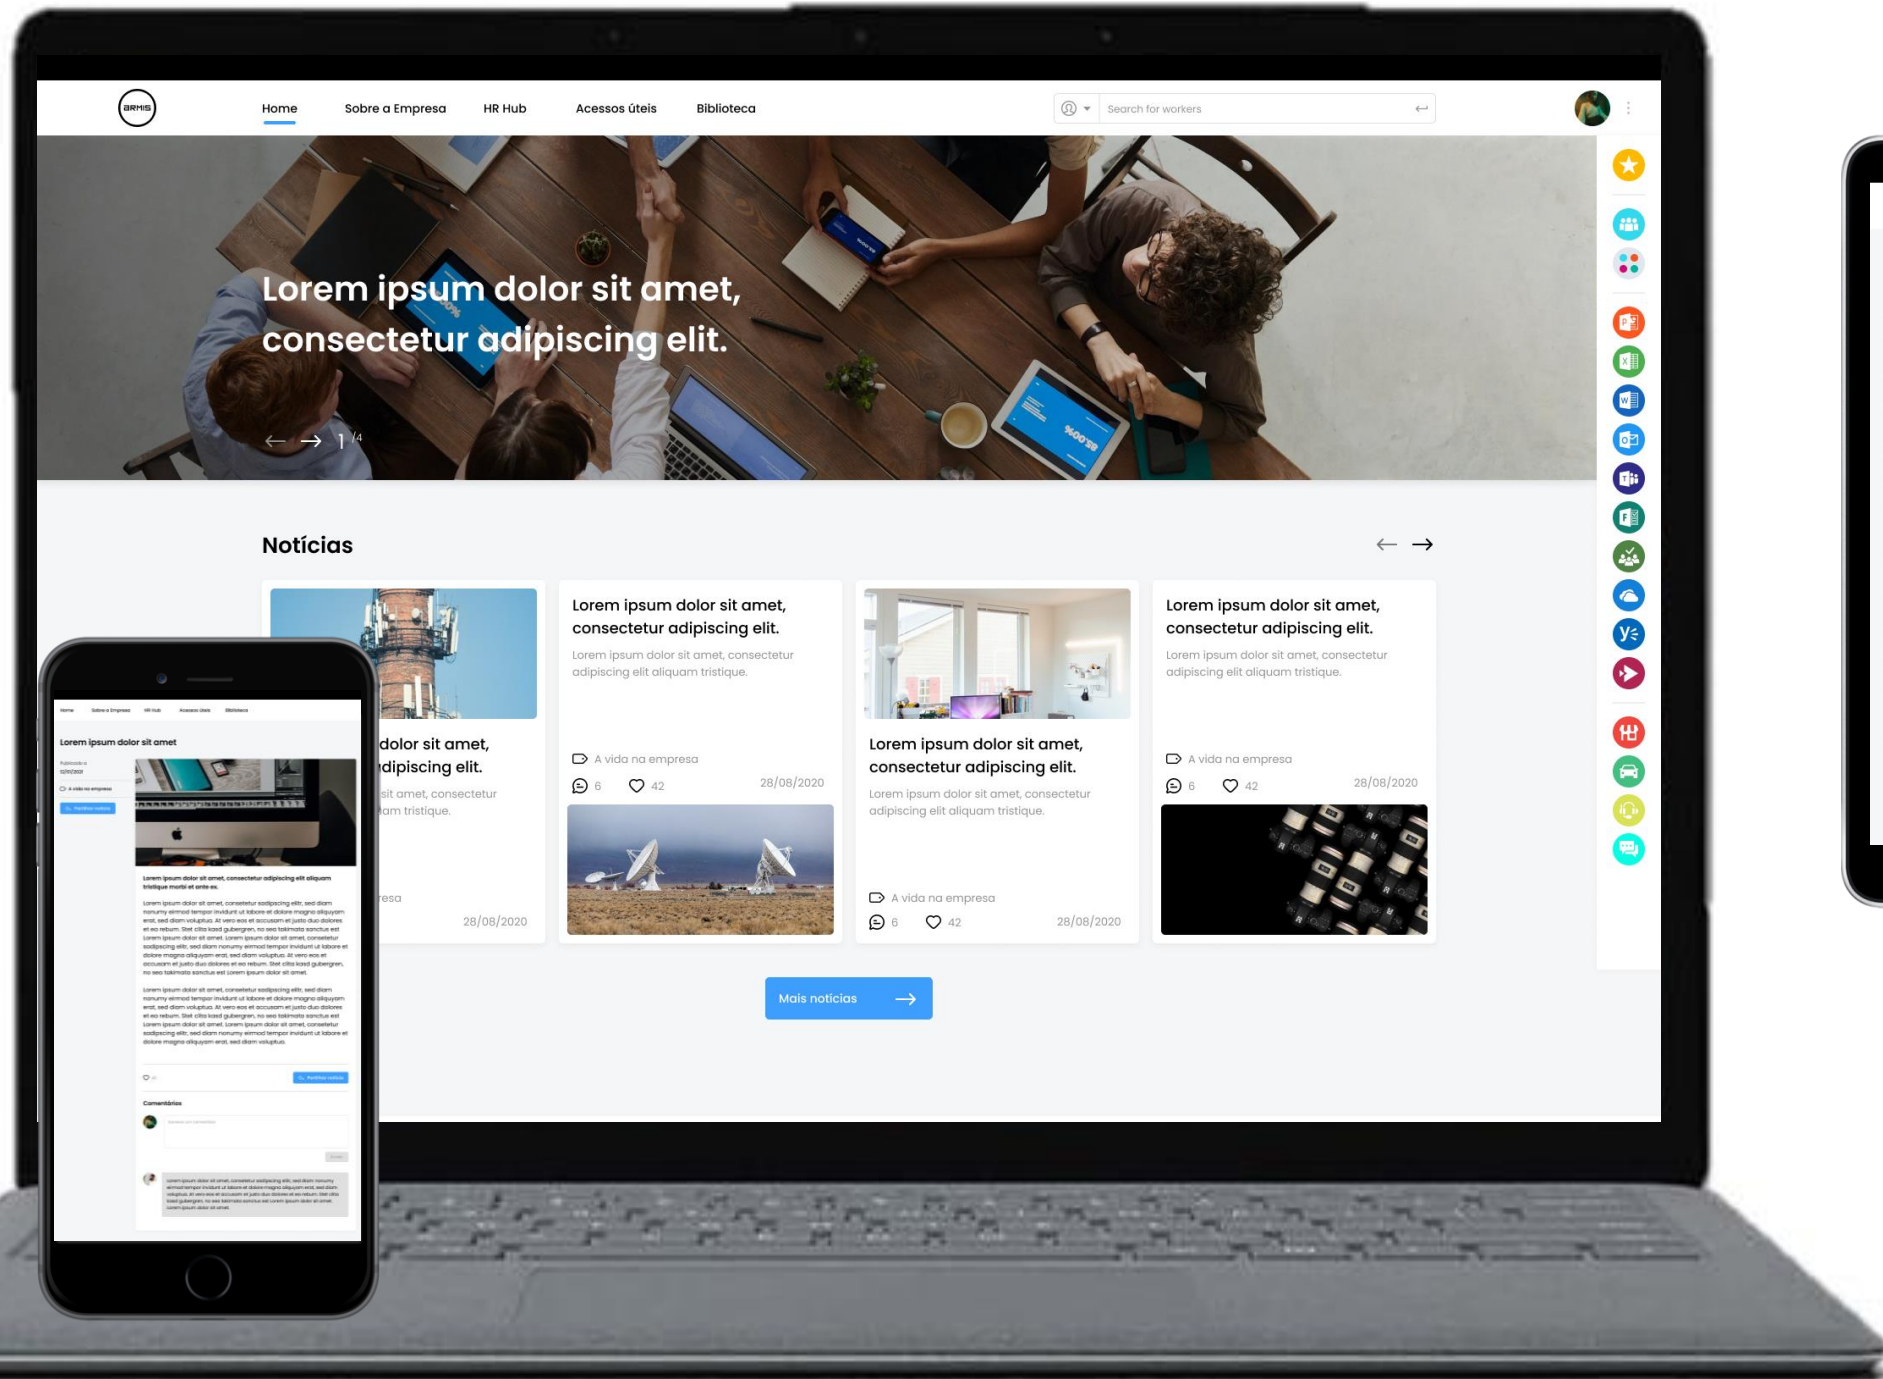

MOBILITY AND ACCESS

One of the single greatest benefits of a cloud based intranet solution, is the ability to be able to access your intranet solution from anywhere in the world that you can get internet access

The Solution

CLOUD INTRANET SOLUTIONS WITH OFFICE 365

Main Features

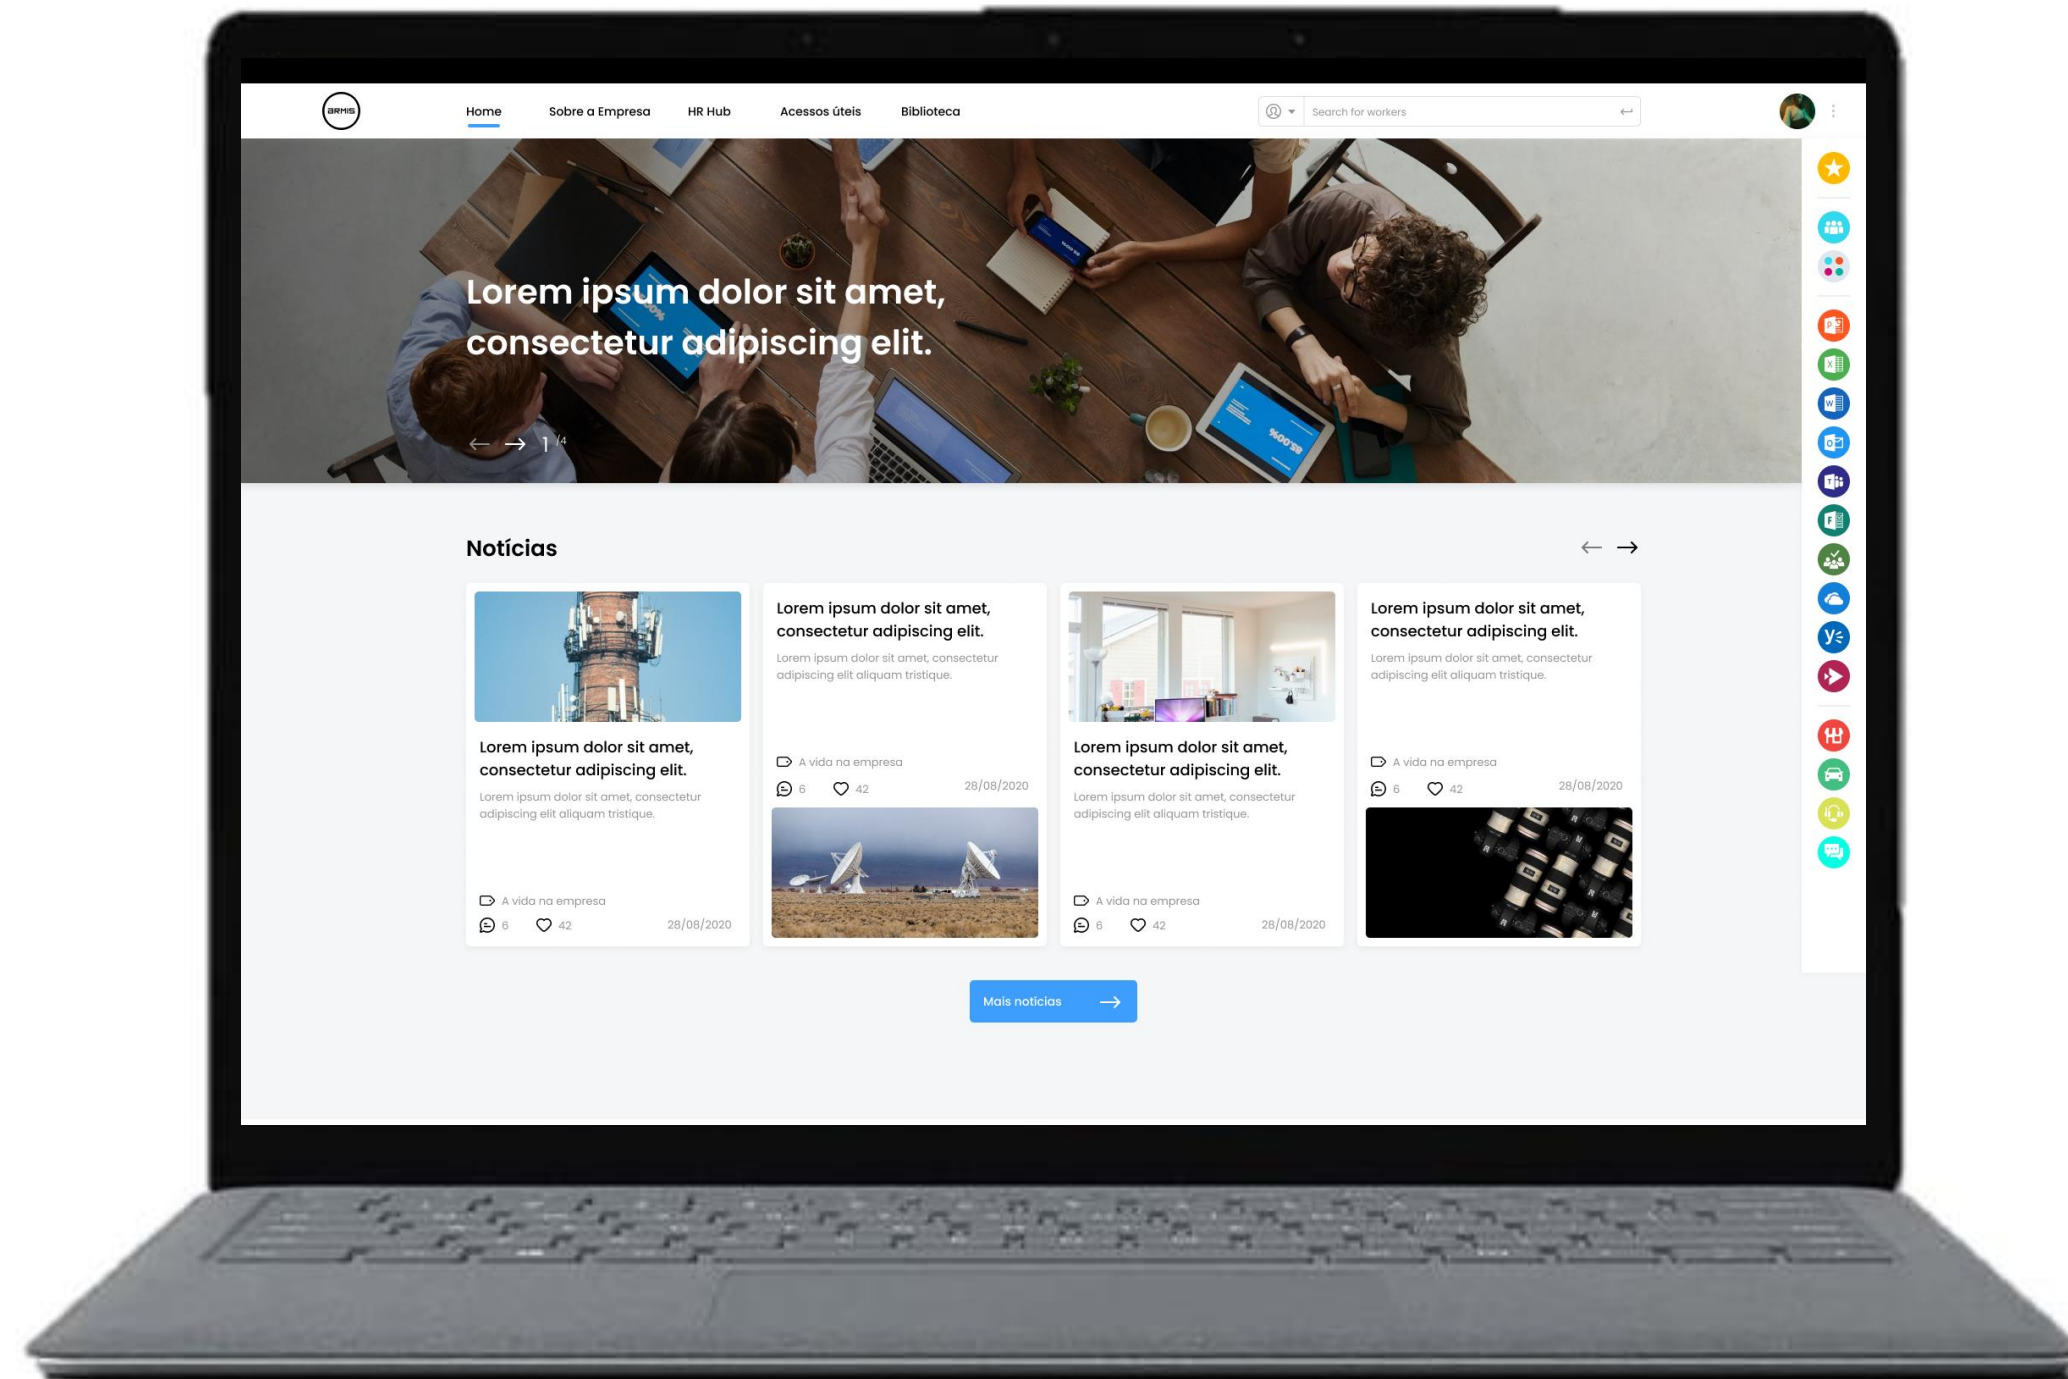

We understand that every organization has its own custom requirement and we can easily accommodate custom requirement based on your needs.

Our solution doesn't look like your standard SharePoint.

It can be easily fitted to your corporate brand and colours with a completely responsive user experience in mobile browsers.

Responsive web design is not a trend, but a necessity. With responsive websites, employees can access the site in an easy manner on any devices like mobile, tablets, laptops and desktops.

Good and responsive website designs can have a significantly positive impact on employee engagement on Intranet.

CLOUD INTRANET SOLUTIONS WITH OFFICE 365

Main Features

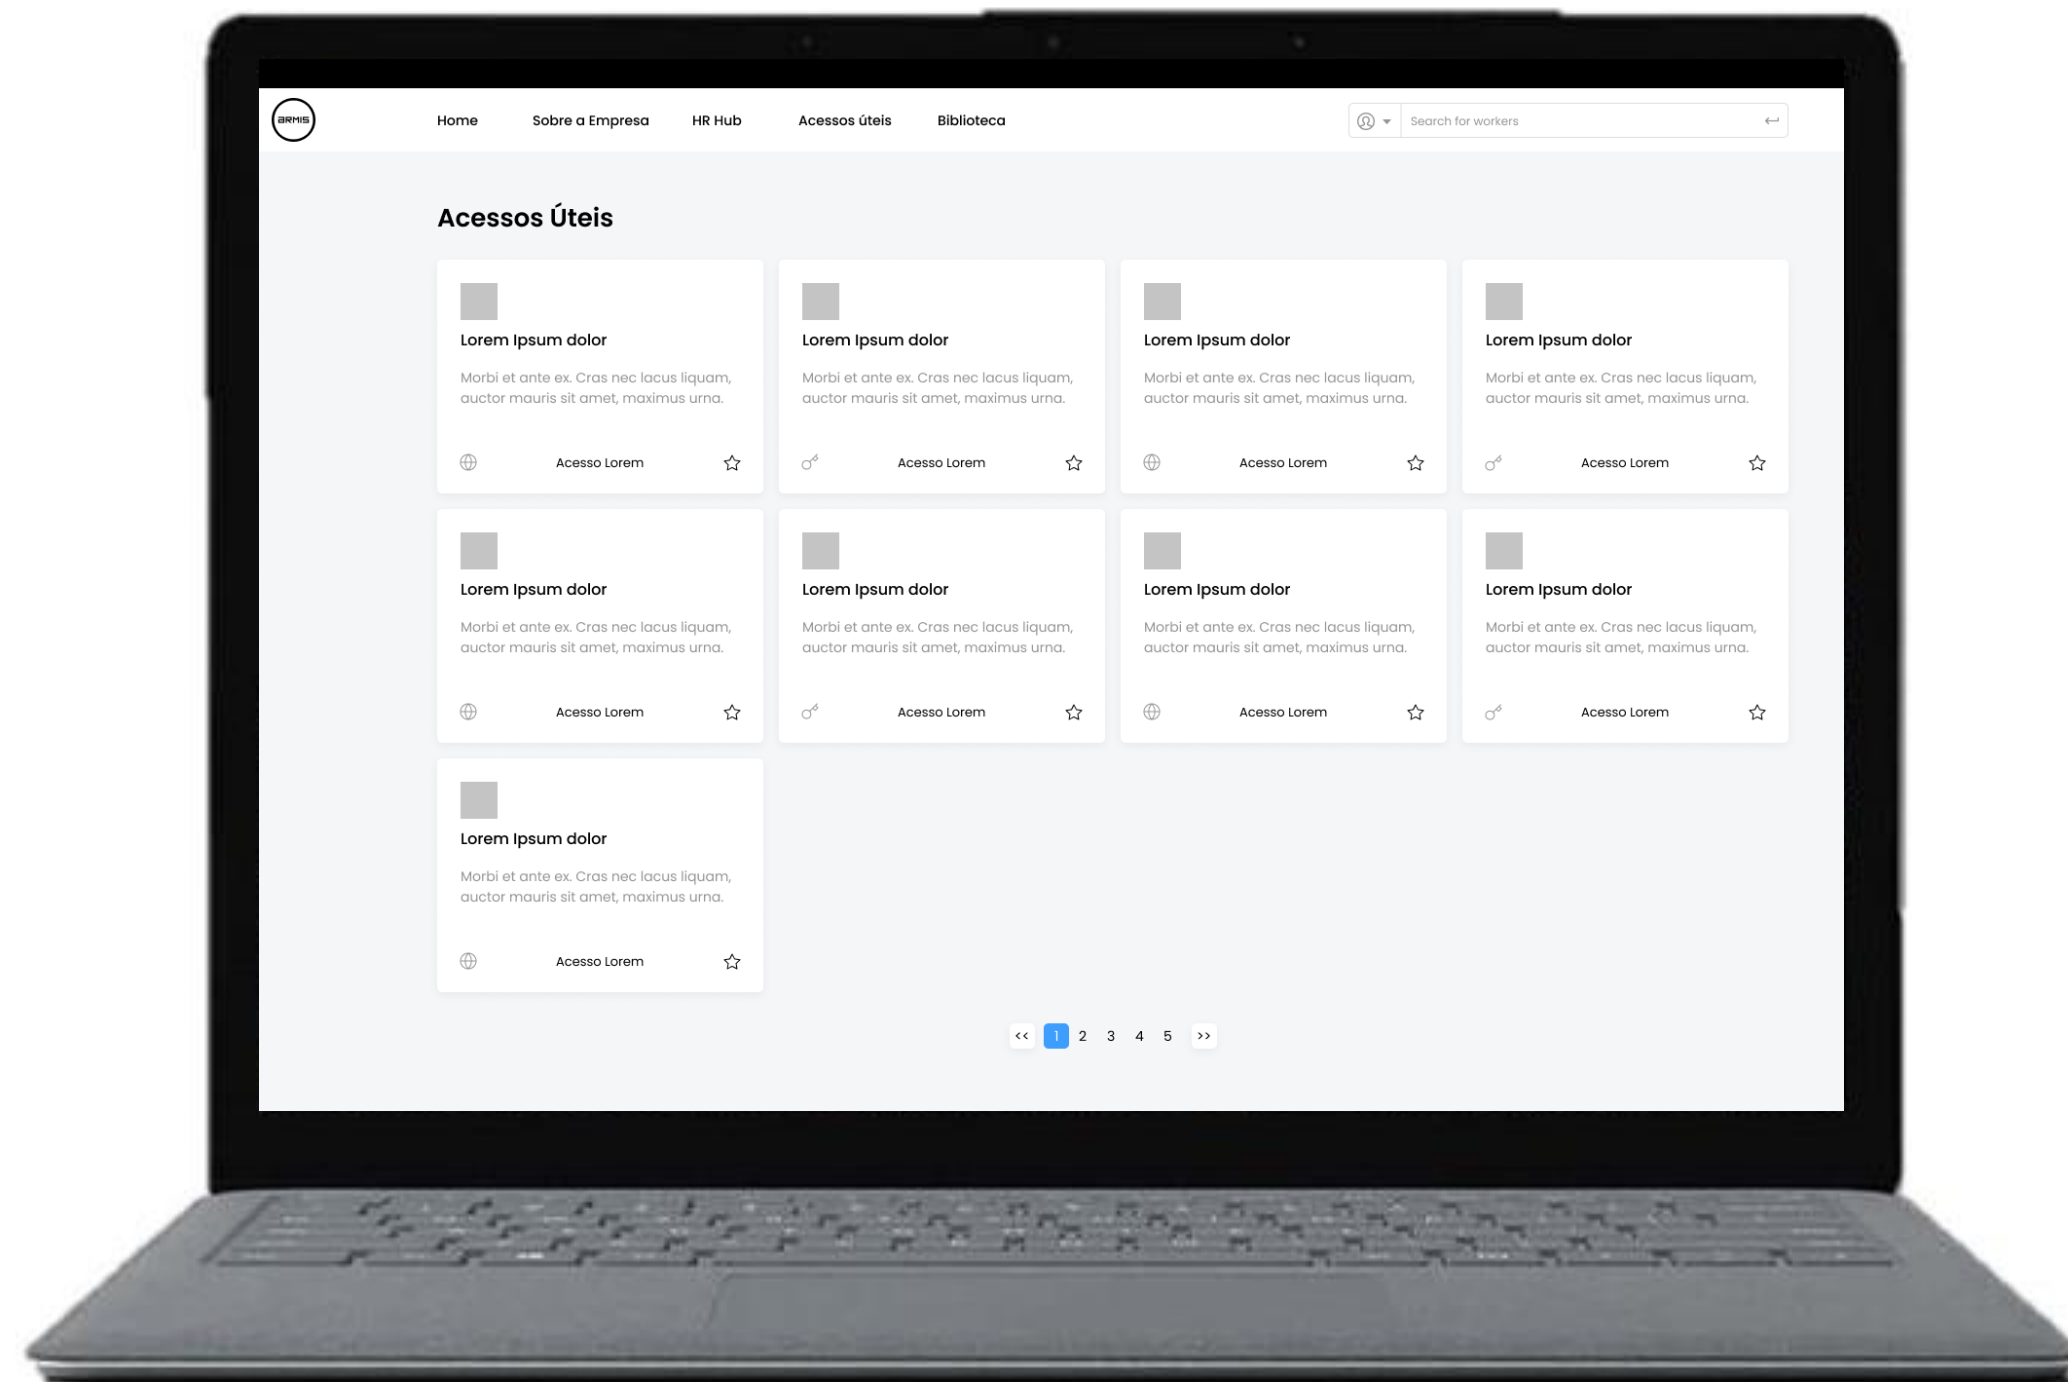

CONTENT TEMPLATES

Creating pages and areas based on page templates the intranet portal will allow you to create a place for business knowledge management. These areas will provide features such as FAQ pages, glossary, company policy, reference documents and more.

You will be able to organize frequently-used files to guide employee onboarding and make collaboration efficient. With intuitive page templates you will have everything necessary in place, so you can focus on the content.

Simple navigation paired with a well-thought-out information architecture is the foundation of a great intranet experience.

The intranet portal navigation will be simple to setup and manage, enabling administrators to create an easy-to-understand structure for your intranet. Armed with the knowledge that the integrated analytics will provide, you'll be able to continually refine your site structure, ensuring your intranet gets better and better over time.

CLOUD INTRANET SOLUTIONS WITH OFFICE 365

Main Features

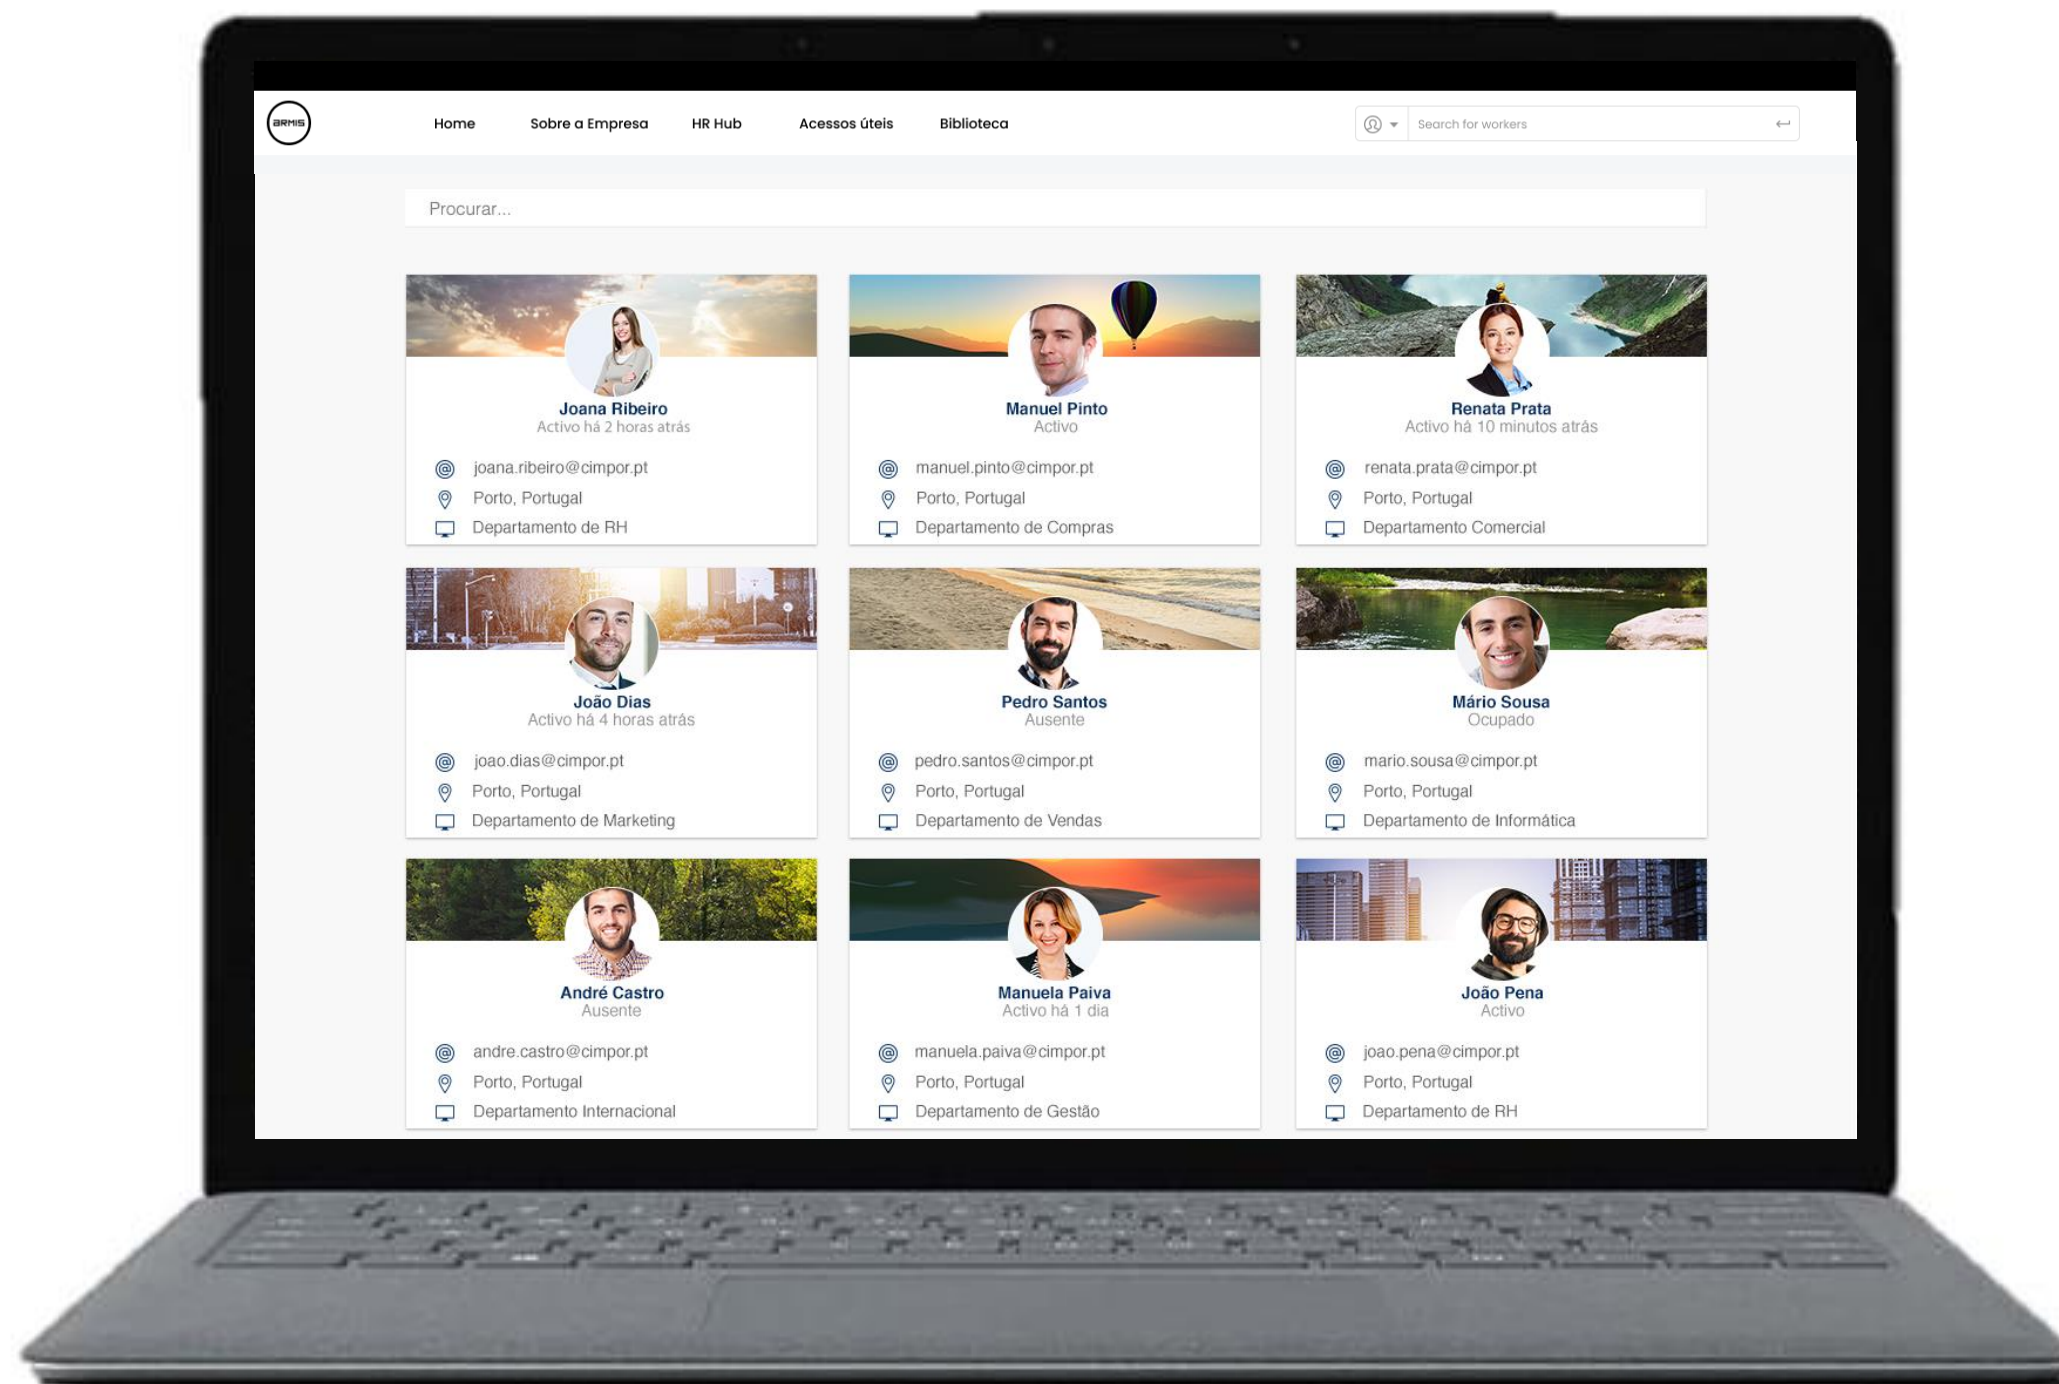

PEOPLE DIRECTORY

A truly digital workplace solution reduces the time spent searching for the right people and makes it easy to locate people, connect faster with subject matter experts and learn from their expertise no matter where they are located, or which function they perform.

Finding the right people has never been so simple! Save time and find the experts via a quick search. Browse profile cards to get to know your co-workers whether they are based in different projects, departments or regions.

The solution offers a clean layout of all employees with profiles that include a name, photograph, job title, department, location, skills, contact information and a description.

Selecting one employee the user will be redirected to Delve user page where they can see the user detailed information like document history and dive down even further into co-worker's daily document activity to see related-project documents or owned documents if they happen to be working on similar projects.
