

WAY4SMART – Solution for Smart Cities

An integrated management system developed to support the city's manager in the management of Intelligent Mobility. Smart cities are self-sustainable urban areas that offer their citizens a close and simple relationship with efficient services providing them with improved quality of life.

Way4Smart is an innovative tool that fulfils the implementation of cities mobility plans, conducts monitoring and management, as well as the dissemination of information in a practical, simple and efficient way.

It has the ability to integrate data from all existing services and combine it with traffic and weather data to provide a truly global mobility vision.

BENEFITS

- Integrates data from all existing services
- Supports mobility plans management
- Improves services efficiency and traffic optimization
- Allows interoperability and the emergence of new services
- Provides a global mobility vision
- Increases cities attractiveness
