

# Accelerate

Remove blockers and achieve more with Accelerate

## CORE ACTIVITIES & OUTPUTS

The Accelerate program is designed to remove a blocker and get momentum into a project via a short-fixed term engagement. This will deliver an MVP or unblock critical projects. Time frames ranging from 3 to 5 weeks.

### OUTPUTS

- Executive Summary
- Business Value Assessment
- Accelerate Charter with defined success criteria, blockers, stakeholders & value
- MVP, or tangible asset to be agreed in scoping

### BENEFITS

- Confidence in solution & approach
- Unblock/Accelerate business value
- Transfer of skills
- Enablement of employees

## THE POWER OF ACCELERATE

Validate business value, theories and remove blockers to projects with a short timeboxed sprint(s) of 3 to 5 weeks.

**Accelerate** can be used to rapidly test a theory, validate an approach or enable a team with fixed time and cost. Providing a low-risk way for a customer to proceed and unlock larger data projects and associated value.

## THE PROCESS OF ACCELERATE

3 to 5 Weeks

When a customer engages **Accelerate**, Arreoblu will look to maximise the amount of time building by quickly assessing the major factors of the engagement into an **Accelerate** charter, which will include expected business benefits, soft benefits, success criteria, dependencies, key people and timelines. The rest of the engagement can be on delivering to the charter in an agile method.

## WHAT DO CLIENTS GET?

The main output of an **Accelerate** program is to quickly test and validate a data concept that may be blocked, either technically or commercially. Proving the theory and reducing risk.

Soft benefits will include enabling customer teams to be self-sufficient when faced with this or similar issues and keep the project moving in the future.
