

# Bitnami Secure Images

## Why Choose Bitnami Secure Images?

Built to provide enterprises a **full and transparent view of their CVE landscape** and enable informed decisions about triage and investment.

**Bitnami Secure Images** helps improve and maintain a stronger security posture by offering only the highest quality, hardened, open source software images.

With Bitnami Secure Images, security teams can trust their developers are **not exposing their systems to existing CVEs**, while IT leaders can be confident that they are making **more informed decisions** about their true security standing and reduce the technical debt associated with using older, unpatched versions.

## Key Features and Benefits

Access thousands of hardened, minimal CVE images for **280+ open source applications** for Kubernetes and VMs on any major cloud.

Comprehensive software bill of materials, SLSA 3 supply chain attestation signatures, anti-virus scans, reports through API **for integration with existing enterprise security tools**.

Triage security vulnerabilities faster, with transparency into CVE risks using industry standard **Vulnerability Exploitability Exchange (VEX)**.

**More than 115 of the internet's most popular distroless application Helm charts** for best class security, 83% smaller with 50% fewer packages.

Industry standard, low attack surface **OS Base (Photon)** that is easy to extend.

Support for **building customized images**.
