

Artisight Operating Room

Enhance Efficiency and Surgical Quality

Every second counts. Your surgical teams need precise, up-to-the-moment info to be efficient and successful.

Artisight's Smart Hospital Platform in the Operating Room, monitors activity in and around the OR, providing event detection alerts and capturing real-time data.

Built on a foundation of ambient sensor technology, Artisight optimizes surgical throughput using a suite of cameras, a speaker and two-way-enabled video, all connected via our computer vision and sensor network platform, trained for your operating room specifications. It's everything your team needs to keep surgeries running smoothly and on schedule.

Our OR solution provides

Smart OR Control Desk

Enables nurses and physicians to monitor patients and surgical procedures in progress, eliminating blind spots in workflow and providing increased operating room efficiency that yield large ROI's.

Teleconsult

Video and audio streaming enable surgeons and anesthesiologists to talk to patients and staff from anywhere in the world, facilitating new care models that increase clinician to patient communication and improve patient outcomes.

Operating Room Coordination

Acting like an air traffic control system, Artisight collects OR data in real time and feeds it to your EMR to measure utilization and ensure seamless, consistent documentation.

Surgical Video Capture and Annotation

Capture videos of surgeries while ensuring HIPAA compliance. This feature removes PHI and converts videos into educational tools for your surgical teams, residents and interns.

Quality Improvement

Leverage Artisight's Ambient Sensor Technology to capture the information that can improve quality and efficiency in the OR by monitoring activities and providing alerts.

"When implementing a new healthcare technology, it's essential not only to understand your current use case, but also to have a clear vision of where you are going.

With Artisight, we have a partner who can offer a comprehensive solution to the challenges we are facing. We've been able to seamlessly adopt this innovative technology to the benefit of our staff, patients and the hospital overall."
