# Artisight Patient Room

Support your Virtual Care Goals and Bring Automation to the Bedside

Artisight's Patient Room Application leverages AI-driven monitoring and real-time communication to enhance patient care. By providing continuous insight into each patient room, the platform improves safety, efficiency, and overall care quality, helping healthcare teams make informed, data-driven decisions.

- Virtual Nursing
- Virtual Rounding
- Virtual Observer
- TeleConsult

- Fall Prevention
- Voice Activated Services
- Staff Duress
- Pressure Ulcer Prevention

- Integrated Translation Services
- Auto EHR Documentation
- Bed Management Intelligence

Streamline Care with Virtual Nursing

Artisight Virtual Nurse provides a virtual command center where virtual nurses can seamlessly monitor patient activities and interact with bedside teams. With real-time EHR documentation and instant alerts for fall risks and turn protocols, virtual nursing allows bedside nurses to focus on direct patient care while their virtual nurse counterparts handle monitoring and documentation. Experience a collaborative work model that reduces burnout and promotes retention.

48%	**31**%	**16**%	**5.5** hr/day
Reduction in Turnover	Reduction of time in EHR	Reduction in Overtime	Time Saved for Bedside Nurses

Enhance Safety with Virtual Observer

Optimize your sitter resources and ensure patient safety with Artisight Virtual Observer. One sitter can now monitor multiple patients simultaneously, responding to AI-detected movement alerts via two-way audio-video communication. Whether you prefer fixed or mobile setups, our intuitive controls and privacy screens ensure a comprehensive and respectful view of each patient room.

- Reduce falls by 69%
- Increase the number of patients each sitter can monitor with an AI Copilot
- Facilitate post event analysis with analytic tools

Enrich Consultations with TeleConsult

Artisight TeleConsult empowers physicians and nurses to round on patients across the entire health system from one easy-to-use app. Need to involve additional providers, interpreters, or family members in a call? Our solution accommodates multi-party conversations, ensuring comprehensive care discussions.

- Robust search and filter functionality enables quick access for any clinical discipline
- Easily add others to the conversation, including other providers, family members and interpreters

Manage Patient Flow with Command Center

Artisight Command Center features the ability to track real time clinical and logistical data to support through-put optimization, keep tabs on essential data and processes and improve capacity orchestration with AI event monitoring inside a patient room.

Product features

Video
High-quality, two-way video with multiple participants for virtual care

Audio
High quality, two-way audio and voice activated services for real-time assistance

Location
Ultra-Wideband Technology (UWB) tracks the movement and flow of assets throughout the hospital

Integrations
Complete bidirectional interoperability for your current and future technologies
