

MICROSOFT OFFICE 365 & ARUBA INSTANT WI-FI SOLUTION OVERVIEW

ENSURE THE DELIVERY OF OFFICE 365 CLOUD PRODUCTIVITY & VOICE SERVICES TO YOUR MOBILE WORKFORCE

Office 365 is a bona fide success among cloud applications. Its feature-rich application suite drives business productivity, employee collaboration, and process innovations.

As workforces become increasingly mobile, the reliable delivery of Office 365 to roaming users grows in importance. And most Wi-Fi networks aren't up to the task.

Eighty percent of Wi-Fi networks need upgrading to handle the surge of mobile users and voice applications. Most can't detect, much less prioritize, Office 365 over non-business critical applications like social media and gaming. And few offer Quality of Service for Office 365 voice services like conferencing.

ARUBA INSTANT: TAILORED FOR OFFICE 365

Aruba Instant is a powerful, simple, and affordable way to deliver secure, enterprise-class Wi-Fi in small to medium sized business. A rich, differentiated set of technologies enables Aruba Instant to deliver better user experiences in Office 365 environments compared with less capable solutions. All with the security you'd expect from a world leader in secure access:

- **AppRF** detects when users launch Office 365, Skype for Business, or any of more than 1500 applications, which are then prioritized above less critical apps.
- **Heuristics** determines when voice or video calls are launched and then applies Quality of Service to enhance the user experience.
- **ClientMatch™** technology ensures that roaming devices are always connected to the best Wi-Fi access point to enhance mobility and avoid dropped connections.
- **Virtual Controllers** inside Aruba Instant access points are synchronized so that if the master controller fails another will step in for non-stop operation.
- **Policy Enforcement Firewall** combined with advanced encryption and built-in intrusion detection protects your privacy and intellectual property. TAA compliant FIPS 140-2 versions are available.

WHY ARUBA INSTANT WI-FI WITH OFFICE 365

- ✓ Automatic detection and prioritization of Office 365 over non-business critical applications
- ✓ Skype for Business certified and Quality of Service for best-in-class conferencing and roaming calls
- ✓ Enterprise-class security protects confidentiality
- ✓ Grows with your business to preserve your investment
- ✓ Fault-tolerant design keeps your business running
- ✓ Cloud or on-premise management to meet your operational requirements

A SOLUTION FOR EVERY APPLICATION

Employees need the freedom to use Office 365 anywhere, and Aruba Instant delivers. A broad range of indoor, ruggedized outdoor, and even explosion-proof Aruba Instant access points can reach into every corner of your enterprise.

Start small, with even a single access point, and grow as needed. Want wired infrastructure? Aruba's broad range of data switches and routers supplement wireless connectivity. Cloud management simplifies network maintenance, with the option to add hosted or on-premise AirWave Network Management in the future. Need guest access? Policy management? No problem - ClearPass Network Access Control will handle the task.
