

# Azure Governance and Fundamentals Workshop

Basics for successful cloud projects

In this workshop by Microsoft and Arvato Systems experts, learn how to lay the foundations for successful cloud projects. More and more customers are successfully relying on Microsoft Azure. What needs to be considered? In order for the advantages of the cloud to be used successfully, important technical foundations must be laid, existing business processes adapted, and new processes established.

The workshop will address the issues of governance, security and connectivity that are critical to the success of the cloud and the digital transformation of your business. You will then have the opportunity to talk about your experiences and challenges on your cloud journey in a 1:1 session with experts from Microsoft and Arvato Systems.

Ideally, you already have some experience with Microsoft Azure - or you are about to start your first Azure project.
