

A Multi-layer Visibility & Control Ecosystem for all Mobile Devices

Asavie Moda maximizes your investment in M365 and boosts enterprise productivity on a global scale.

Asavie Moda is a network-based mobile security service built on Azure that integrates with MS Endpoint Manager to secure and control data on any type of SIM-enabled device. Thanks to its unique position at the network layer Asavie Moda offers IT and security teams within the enterprise a range of benefits:

- Asavie Moda uniquely extends the reach of Endpoint Manager security and management policies onto the network layer.
- An OS and agnostic solution that works on smartphones, tablets, Mi-Fis and routers alike, providing a consistent internet experience for all users within the business.
- A single pane of glass from where IT admins can monitor and enforce adherence to mobile data policies.
- Protect users on cellular and Wi-Fi networks so they are protected even if they need to access information from a café, airport or hotel.

Visibility

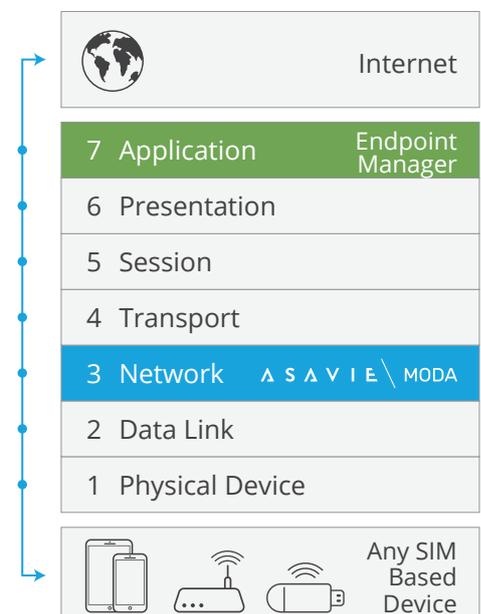

Zero-gap visibility of all IP traffic that delivers unparalleled insights and improves the ability of IT teams to make decisions regarding usage policies and security.

Control

Through the integration with MS Endpoint Manager, enterprises can extend their usage policies from the device into the network. This translates into extended compliance and productivity without distractions.

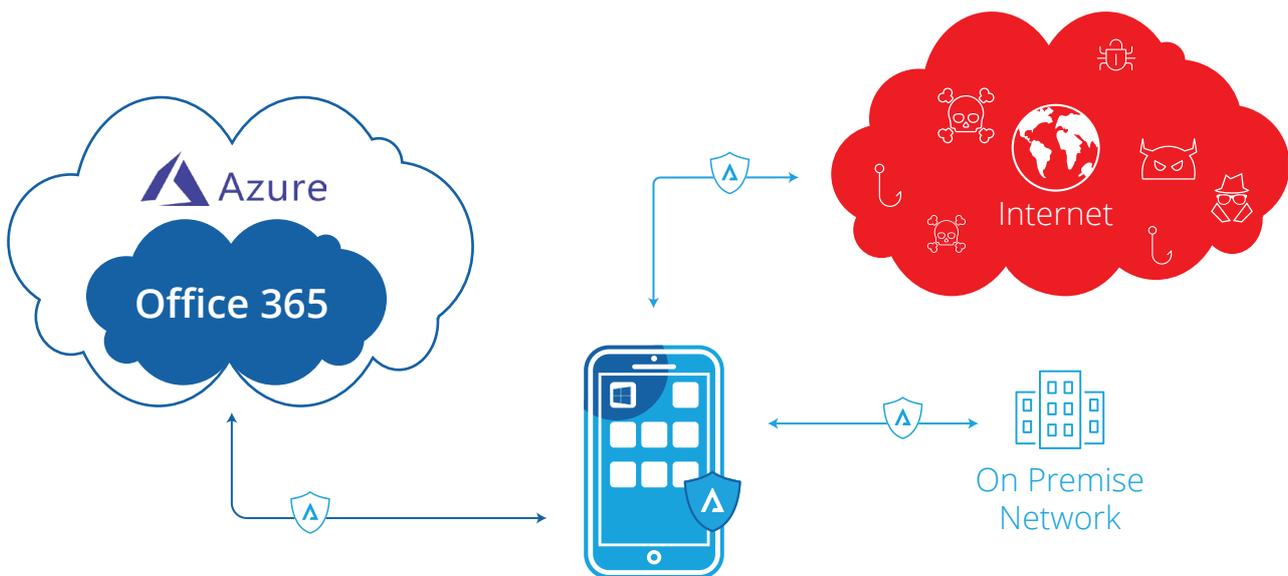

Security

Asavie Moda removes data traffic from the public internet, putting it outside the reach of malicious actors. Its content categorization feature blocks unknown or unregistered sites that could trigger a malware attack or inappropriate content.

Asavie-Endpoint Manager Integration

- Endpoint Manager provides mobile device compliance and app management capabilities to the enterprise. Asavie Moda complements this solution by bringing the Endpoint Manager security policies and management capability into the network level.
- Asavie Moda incorporates real-time visibility, control and security of mobile data in transit to and from any type of SIM-enabled device.
- The integration between Endpoint Manager and Asavie Moda enables enterprises to develop a comprehensive and consistent strategy towards managing the mobile internet experience of their employees.

Why Asavie Moda?

- Asavie Moda is an all-in-one mobility solution that is easy to set-up and easy to use.
- Full control of data traffic on all SIM-enabled devices means no blind spots in data security.
- Asavie Moda takes your data off the public internet, keeping it safe even if the device is lost or stolen.
