Microsoft Sentinel Rapid Adoption
Real-Time Threat Detection and Response

Microsoft Sentinel is a powerful cloud-native SIEM solution—but many businesses struggle with deployment due to limited in-house expertise, change management challenges, and cost concerns.

Ascent's **Sentinel Rapid Adoption** offer accelerates implementation, ensuring your organization gains full security visibility with an optimized, cost-effective SIEM strategy.

Immediate Impact, Long-Term Security

Many businesses have Microsoft E5 licensing but aren't leveraging Sentinel, leaving them exposed to security gaps and unnecessary third-party SIEM costs. Ascent helps organizations:

Unify Security Operations – Replace fragmented security tools with a centralized SIEM for complete oversight and control.

Enhance Threat Detection - Integrate native and custom data sources to detect and respond to threats in real time.

Reduce SIEM Costs – Reduce reliance on expensive third-party tools by consolidating security operations within Microsoft Sentinel.

Strengthen Automation & Response – Implement AI-driven workflows to accelerate threat containment and remediation.

Scope of Engagement

Review current security event logging, alerting environment, and data sources to identify gaps.	**Define** alert sources and establish a structured ingestion process for Sentinel.
Configure Sentinel Workspace, enable data sources, and integrate security events for visibility.	**Provide** Sentinel training, enablement, and automated workflow customization to enhance security operations.

About Ascent

Ascent is the cybersecurity partner to **SECURE, ADVISE and MANAGE** the enterprise. We are built to help firms evolve their cybersecurity posture, modernize their Microsoft solutions and manage their security programs. Ascent provides organizations with the Microsoft Security expertise needed to quickly move beyond security constraints and focus on achieving business results.
