

RUN YOUR MySQL, MariaDB or PostgreSQL DATABASE IN AZURE with Ascent Technology.

Microsoft Azure

Bring scalability, flexibility, security, and performance to your Open Source Database workloads, while reducing the cost of infrastructure, maintenance and support when you deploy on Azure.

We've got you Covered with Options

Multiple options are available to help you leverage the innovative technologies you need to carry your organisation into the future.

Lift and shift (Rehost) your MySQL, MariaDB or PostgreSQL Database to Azure

- Provide the availability, security, and performance your enterprise workloads require at a fraction of the cost of running on-premises
- Rely on the cloud platform built for enterprises to ensure that your MySQL, MariaDB and PostgreSQL workloads achieve the scalability, flexibility, and compliance your business requires
- Upgrade to a modern infrastructure with virtual machines and high-performance, SSD-based premium storage. By providing flexibility in the size and performance of storage and compute resources, Azure helps you ensure that your MySQL, MariaDB and PostgreSQL applications will scale to meet business demands

Migrate (Refactor) your MySQL, MariaDB or PostgreSQL Database to DBaaS in Azure

Azure Database Services for MySQL, PostgreSQL, and MariaDB, help you turn ideas into solutions faster through trusted, managed services for your favorite open source database engines. Azure supports community databases, which means you get the same languages, tools, and frameworks you love, backed by an industry-leading SLA.

- Easily deploy applications to the cloud using your choice of languages and frameworks
- Achieve business continuity and dynamically respond to changes in customer demand with built-in high availability and elastic scaling
- Get unparalleled security and compliance, including Azure IP Advantage, and industry-leading reach through a global network of Microsoft datacenters
- Flexible pricing: Choose the right resources for your workloads, with no hidden costs
